

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P.,
President of the Local Government Board, &c. &c.

*General Register Office, Somerset House,
31st March 1879.*

(1877.)

SIR,

THE year 1873 presented a remarkably high marriage-rate which since that year has declined to a low point; and in that has followed the depression of trade according to the law which shows that the prospects of getting a livelihood largely regulate marriages in this country. The numbers that married in the year 1877 otherwise than by the rites of the Established Church were large; they amounted to 51,956 or to 27 per cent. The greatest increase has been observed since 1851 when the proportion was only 15 per cent. The proportion of Roman Catholic marriages has since that date remained stationary. The increase has been chiefly among other religious denominations and in the marriages in the Superintendent Registrars' offices. Since the years 1856-60 the proportions of marriages by license have diminished in the Established Church, while those by banns have increased. In the year under review 83 divorced persons were re-married. The tendency to early marriage which has been observed to increase since 1841-5 attained its maximum in 1874, when 23 in 100 females, and 8 in 100 males were under age at the date of marriage. The proportion of men and women who write their names in the marriage register has, I am happy to report, gone on increasing; and in the year 1877 only 15 men and 21 women in 100, signed the register with marks. The men in Scotland are fewer by 6, women by 3; so that comparatively the women are better educated in England than in Scotland. Ireland in the education of both men and women lags sadly behind the other divisions of the United Kingdom. I have to notice still an excess of male births over the births of females; but the disproportion is diminishing; in the ten years 1838-47 there were 105·0 males to 100 females registered, in the ten years 1868-77 the proportion had declined to 103·9 males to 100 females. The birth-rate was 36·2 per 1000; which is above the rate of the last ten years. The proportion of illegitimate children has fallen from 6·4 per cent. in 1855-64 to 4·7 per cent. in the three years 1875-77. The cause of this happy decrease is not obvious on the face of the returns; but I have shown the comparative proportions in every county. The mortality was remarkably low in the year 1877; it was at the rate of 20·4 per 1000. In the country districts the mean mortality was 18·2, in the town districts 22·0. The death-rates in 1847 and 1877 were 29·0 and 22·0 in the town districts; 21·3 and 18·2 in the country districts. Thus the mortality

declined by 7·0 in the town districts, and by 3·1 in the country districts. The death-rate of males in the whole of the country exceeded the death-rate of females; the rates were respectively 21·8 and 19·0. The greatest differences occurred at the ages under 5 and above 65. The mean annual rates of mortality were in the four quarters of the year 22·3, 21·4, 17·7, and 20·2.

There has been a considerable increase in the number of hospitals since 1872 when the number was 450; in 1875 they were 582, and in 1877 the number of hospitals had increased to 644. The number of deaths in each of the three years was 11,638, 12,548, and 12,570; thus there has been no increase of death at all corresponding to the increase of hospitals.

There has been a great decrease in the mortality of the army abroad; the mortality of non-commissioned officers and men was 17·8 in the 16 years 1861-76, against 10·6 in the year 1877. The mortality of officers in the corresponding years was 13·9 and 12·5. The mortality of non-commissioned officers and men at home was 11·0 in the 16 years against 8·3 in 1877. The officers are older than the men and their mortality is higher in 1877 than the mortality of men. The mortality of the navy was 7·1; 6·2 on the Home station, 14·8 in China, and 13·2 in the East Indies.

The deaths by drowning in the Royal Navy were less than one in 1000 in the year 1877. The Merchant Service lost eight times as many in proportion by wreck as Her Majesty's Navy. The mortality by wreck was 7·4, by accident 5·5; making 12·9 in the aggregate. This is slightly below the average 13·4. Some of the deaths on board colonial and fishing vessels are included, whereas the strength on which the mortality is calculated relates only to the registered vessels of the United Kingdom. It is to be regretted that the improvement is so slight after all the agitation that has taken place on the subject.

I have brought together the three divisions of the United Kingdom. The marriage-rate in Scotland was only 14·5, in Ireland was only 9·3; the marriage returns of both countries are evidently defective. The birth-rate in Scotland was 35·6, in Ireland 26·2; this is partly due to the diminished proportion of women in Ireland between the ages 15 and 55; but it is partly due to defective registration. The mortality in Ireland is set down at 17·5. The mortality is low in Ireland, but the difference is probably partly due to defective registration.

Probates and administrations were granted in England and Wales in 44,661 cases in the year; the value of the effects were sworn under 125,547,904*l*. The average value in each case was 2811*l*. against 2779*l*. in the previous year. The proportion of persons of 21 and upwards who left wills, or left estates on which letters of administration were taken out, was 17·0 per cent.

I have shown the number of births to a marriage in ten of the chief states of Europe, from which it appears that the fecundity is 4·92 children to a marriage in Prussia, and 3·42 in France. England occupies an intermediate position, 4·63, but is much nearer Prussia than France.

The meteorology of the year was remarkable by its high winter temperature and its low summer temperature; the winter was exceptionally mild, whereas the summer temperature was below the average. The rainfall was above the average.

I proceed now to discuss the facts in detail, of which I have given the above summary.

Emigration from and Immigration into the United Kingdom.—Mr. Giffen reports a further decline in 1877 in the annual number of emigrants from the United Kingdom.

In the annexed table it will be observed that the total emigration in 1877 was 119,971 against 138,222 in the previous year, showing a decrease of 18,251.

TABLE I.—EMIGRANTS OF VARIOUS NATIONALITIES, 1863-1877.

YEARS.	Of British Origin.				Foreigners.	Not distinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	56,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	23,619	6,291	209,801
1866	58,356	12,307	98,890	170,053	26,691	8,138	204,882
1867	55,494	12,866	88,622	156,982	31,193	7,778	195,953
1868	58,268	14,954	64,965	138,187	51,956	6,183	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	106,283	22,935	74,283	203,511	48,396	6,033	258,940
1871	102,453	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,343	21,310	83,092	228,345	72,198	10,069	310,612
1874	116,400	20,286	60,406	197,272	38,465	5,277	241,014
1875	84,540	14,686	41,449	140,675	31,317	1,787	173,809
1876	73,396	10,067	25,976	109,439	25,584	3,169	138,233
1877	63,711	8,653	22,831	95,195	21,289	3,487	119,971

The number of emigrants of *British origin*, after adding a certain proportion of 3,487 whose birthplaces were not distinguished was 97,967 against 112,045 in the previous year, showing a decrease of 14,078.

The total number of immigrants in 1877 was 81,848, showing a reduction of 11,709, or 12·5 per cent. compared with the number in the previous year. As regards immigrants of British origin only, the number was 64,060 in 1877, against 72,960 in the previous year, being a reduction of 8,900 or 12·2 per cent.

The excess of emigrants over immigrants of British origin in 1877 was, therefore, 33,907 against 39,085 in 1876.

These figures, it will be borne in mind, only refer to passengers to and from places out of Europe.

Of the 97,967 emigrants of British origin 65,785, or 67 per cent. were English, 8,900 or 9 per cent. were Scottish, and 23,282 or 24 per cent. were Irish, the proportions being the same as in the previous year.

In the number of emigrants of *Irish* origin there was a further decrease of 3,047, or 11·6 per cent. on the comparatively small number in the previous year.

The gradual decrease of emigrants of Irish origin is remarkable; the number who left the United Kingdom, according to these returns, during the fifteen years 1863-77 was 1,148,567; of these 544,869 or 47 per cent. emigrated during the five years 1863-67, 364,726 or 32 per cent. in the five years 1868-72, and 238,972 or 21 per cent. in the five years 1873-77. The number of emigrants of Irish origin in 1877 was 82 per cent. less than that in 1863.

In the emigration return of the Registrar-General of Ireland the number of natives who emigrated from *Ireland* in each of the six years 1872-7 is in excess of the number of emigrants of Irish origin from the *United Kingdom*, published by the Board of Trade. This is probably owing to a certain number crossing over to Great Britain; thus of the 38,503 Irish who left their native soil in 1877, less than one half (18,232) went abroad, for 11,573 came to England and Wales, and 8698 to Scotland. Of 37,587 Irish who emigrated from Ireland in the previous year (1876) 20,800 went to the Colonies or foreign countries, and 16,787 crossed over to Great Britain. No returns of the destination of emigrants from Ireland are published previously to 1876. Since 1871 the Irish have probably migrated in larger numbers from one part of the United Kingdom to another.

TABLE II.—IRISH EMIGRATION.

YEARS.	NUMBER OF EMIGRANTS OF IRISH ORIGIN.		Excess or Defect of numbers in Col. 1. over or under the numbers in Col. 2.
	From the <i>United Kingdom</i> , according to the Returns of the Board of Trade.	From <i>Ireland only</i> , according to the Return of the Registrar General of Ireland.

Total in the 15 Years } 1863-1877 - -	1,148,567	1,155,654	- 7087

The number of emigrants to Australasia in 1877 was nearly the same as in the previous year, while the numbers to the United States and to British North America in 1877 were still less than the already greatly diminished numbers in the previous year. The emigrants to the several destinations, however, bore nearly the same proportions to the total as in 1876. See Table III.

TABLE III.—SHOWING the AVERAGE ANNUAL NUMBER of EMIGRANTS of BRITISH ORIGIN to each of the under-mentioned PLACES.

PERIOD.	TO UNITED STATES.		TO BRITISH NORTH AMERICA.		TO AUSTRALASIA.		TO ALL OTHER PLACES.		TOTAL.
	Average Annual Number.	Per-cent- age of Total.	Average Annual Number.	Per-cent- age of Total.	Average Annual Number.	Per-cent- age of Total.	Average Annual Number.	Per-cent- age of Total.

" 1877 - -	45,481	48	7,720	8	30,138	32	11,856	12	95,195

Note.—No correction has been made in the above table for those whose nationality was not distinguished.

The subjoined table shows the number of emigrants and immigrants of British origin. In 1877 the number of emigrants to the United States (45,481) was nearly the same as the number of immigrants therefrom (44,878), the excess of emigrants over immigrants being only 603. To British North America the numbers were—emigrants 7,720, immigrants 5,687, and the excess of emigrants was 2,033. To Australasia the emigrants were 30,138, while the immigrants therefrom were only 4,637, showing an excess of 25,501 emigrants.

TABLE IV.—EXCESS OF EMIGRANTS OVER IMMIGRANTS OF BRITISH ORIGIN in 1876 and 1877.

DESTINATION OR COUNTRY OF DEPARTURE.	Emigrants of British Origin.		Immigrants of British Origin.		Excess or defect of Emigrants.	
	1876.	1877.	1876.	1877.	1876.	1877.
United States - - -	54,554	45,481	54,007	44,878	- 143	603
British North America -	9,335	7,720	6,629	5,687	2,706	2,033
Australasia - - -	32,196	30,138	2,579	4,637	29,617	25,501
All other places - -	13,384	11,856	7,400	8,688	5,985	3,168
TOTAL - -	109,469	95,195	71,404	63,890	38,065	31,305

Note.—The numbers in this Table are uncorrected for those whose nationality was not distinguished.

The age, sex, and occupation of emigrants and immigrants, *according to their nationalities*, are published for the first time in 1877. Mr. Giffen directs attention to the large proportion of children emigrating to Australasia compared with the proportion to the United States, which appears to confirm the inference drawn from other features of the returns that emigration for permanent settlement to the United States and to British North America is suspended.

This inference is further confirmed by reference to the occupation returns, which show that while a comparatively large number of agricultural labourers and of female domestic servants emigrated in 1877 to Australasia, a much smaller proportional number of servants, and hardly any agricultural labourers, proceeded to the United States.

Increase of Population.—The natural increase of population in England and Wales in 1877, derived from the excess of births over deaths, was 387,684. The net loss of persons of British origin to the population of the United Kingdom by excess of emigration over immigration was 33,907, about 73 per cent. of which (24,752) probably represents the proportion belonging to England and Wales. This number deducted from the natural increase of population gives 362,932 as the net gain in 1877, which approximates to the increase of population (305,193) during the twelve months, estimated from the actual rate of increase during the thirty years 1841–71.

Meteorology.—There were low barometer readings at the commencement of the year. During the 181 days ending 30th June the readings were below their averages on 105 days, and above on 76 days; from 1st July to 31st December the readings were below their averages on 95 days, and above on 89 days. During the first 50 days of the year 1877 there was an average daily excess of temperature of 6°·1 and the winter of 1876–7 was exceptionally mild; after this there were alternations of temperature until the 23rd March and for 26 days previously to that date there was an average daily deficiency of temperature of 2½°. From then to April

11th there was an average daily excess in the mean temperature of about 3° ; afterwards a cold period set in and lasted from 12th April till 2nd June. From 1st to the 6th of May the average deficiency of temperature was as great as $11\frac{1}{2}^{\circ}$. There was an average daily deficiency of mean temperature of 4° during the 52 days ending 2nd June; after this the weather was somewhat warmer. For the 43 days ending August 12th there was a deficiency in the mean temperature of $1\frac{1}{2}^{\circ}$, and the average deficiency for the 40 days ending September 30th was $3^{\circ}\cdot 1$; indeed Mr. Glaisher reports that the mean temperature during the month of September was lower than that of any September back to 1803. The temperature of the summer of 1877 was therefore below the average. There were severe gales on the 14th October and on the 11th November; on the latter date the lowest reading of the barometer for the year was recorded. During the remainder of the year the temperature was variable, and from the 13th to the 28th December the alternations were still more frequent. The average daily temperature of the 47 days ending with the latter date was $\frac{3}{4}^{\circ}$ in excess. The mean temperature of the year at Greenwich was $49^{\circ}\cdot 4$ or $0^{\circ}\cdot 9$ in excess of the average of 106 years.

The rain-fall in January was excessive, and at Greenwich it measured 4·35 inches; this, reports Mr. Glaisher, is most remarkable since the rain-fall in December of the previous year was excessive. The total fall in the first four months was 4·8 inches above the average. In June and September the quantity was remarkably small, while the fall in November was very large. Rain or snow fell in 185 out of the 365 days, and the total fall in the year was 26·9 inches, or 1·6 inches above the average of the previous 62 years. Snow fell on 71 days in the year.

The total horizontal movement of the air was greater than usual.

Prices.—The country, in 1877, had not recovered from the commercial depression which prevailed in the three years 1874–76. Four years of industrial distress have therefore now been experienced since the period (1871–73) when high wages raised the cost of production so extravagantly high.

For three successive years the harvest has been bad. In 1877 cold and rain in July and rain in August damaged the crops, especially in the north, and the average price of wheat rose from 46s. 2d. per quarter in 1876, to 56s. 9d. which, however, considering that it was a period of war in Europe, was comparatively low. But in order to provide food for 33 millions of people (who it is estimated consume between 22 and 23 millions of quarters of wheat annually) the wheat grown in the United Kingdom was supplemented by an import for home consumption* of 12,310,957 quarters of foreign and colonial wheat in 1877 against 10,069,050 quarters in 1876.

The area under wheat in the United Kingdom, including the Isle of Man and the Channel Islands, in 1876 was 3,124,000 acres, being 11 per cent. less than in 1875, and 22 per cent. less than in 1869.

Among the most noteworthy events at home which contributed to the depression in 1877 may be mentioned an unsatisfactory harvest, the prevalence of strikes in most of the great trades, distress in the iron and coal trades; agricultural interests also suffered greatly, the potato and fruit crops failed generally, and the year, like its predecessor, was altogether unfavourable for the farmer; indeed, had there not been a good foreign supply of corn and other imports to compensate for the deficiency of home produce, the distress would have been greatly aggravated.

Much depression was also experienced on the continent, and in the United States, the political conflict in France, the war between Russia and Turkey, and the famine in Southern India contributing more or less to the general state of depression.

* A certain quantity of home-grown wheat is exported from the United Kingdom every year, no notice of which is here taken.

The quantity of meat imported in 1876 was 788,973 cwts., showing an increase of 257,065 cwts. over that in 1875. In 1877, the quantity was still greater, viz., 1,277,686 cwts., being 488,713 cwts. in excess of that imported in 1876.

TABLE V.—QUANTITY OF MEAT IMPORTED in the Seven Years, 1871–7, exclusive of PORK.

—	1871.	1872.	1873.	1874.	1875.	1876.	1877.
Beef, Salted or Fresh -	Cwts. 302,079	Cwts. 228,912	Cwts. 280,554	Cwts. 261,721	Cwts. 215,581	Cwts. 413,351	Cwts. 678,505
Meat, " " -	42,340	55,354	79,841	119,403	144,954	92,556	130,178
Total -	344,419	284,266	340,395	381,124	360,535	505,907	808,683
Meat, Preserved otherwise than by salting -	254,533	350,729	280,749	265,223	171,373	283,066	469,003
Total Meat -	598,952	634,995	601,144	646,347	531,908	788,973	1,277,686

This largely increased importation of meat has probably had the effect of reducing the recent high price of butchers' meat. The average price per pound of beef by the carcass at the Metropolitan meat market was 6½d. in 1876; in 1877 it was 6¾d., or 5·7 per cent. less. The average price per pound of mutton was 7½d. in 1876; in 1877 it was 7d., showing a decrease of 6·7 per cent.

Potatoes were very dear in 1877, the mean price for the best quality at the waterside market in Southwark being 146s. 0d. per ton; only once in the last 26 years has this price been exceeded, viz., in 1873, when they were 159s. per ton.

In the importation of animals there is a marked decrease in 1877 compared with the previous year; in oxen and bulls of 20,339, in calves of 13,926, in sheep and lambs of 167,274, and in swine of 23,521. See sub-joined table.

TABLE VI.—NUMBERS and VALUE OF ANIMALS IMPORTED in 1875, 1876, and 1877.

ANIMALS.	NUMBERS.			VALUE.		
	1875.	1876.	1877.	1875.	1876.	1877.
Oxen and Bulls -	173,705	168,958	148,619	£ 3,787,588	£ 3,554,460	£ 3,143,125

GRAND TOTAL -	1,321,278	1,356,463	1,098,287	7,329,585	7,260,115	6,012,778

NOTE.—The figures in this Table, excepting for Sheep and Lambs, are derived from the Monthly Return of "Trade and Navigation of the United Kingdom," compiled by the Board of Trade, as the "Statistical Abstract" does not distinguish the several kinds of cattle or give the number of Swine.

Pauperism.—The average number of paupers returned on the last day of each week in each of the years 1876 and 1877 was—in-door 137,930 and 146,843—out-door 531,344 and 519,493, showing an increase in the number of in-door paupers relieved, but a decrease in the number of out-door paupers relieved.

MARRIAGES.

From a commercial point of view 1877 was more unfavourable than the previous year, and this fact is represented by a further decrease in the marriage-rate; the number of marriages fell from 201,874 in 1876, to 194,352 in 1877, or the number of persons married to 1000 persons living fell from 16·7 to 15·8; so low a rate has not been observed since 1847, about the time of the Irish famine.

The marriage-rate (persons married to 1000 persons living) is invariably lower in the agricultural counties than it is in the counties where the population is engaged in mining and manufacturing industries. The rate in 1877 in the chiefly agricultural counties ranged from 10·7 in Hereford, 11·2 in Herts, 11·3 in Cornwall, 11·9 in Cambridge and in Essex, to 13·7 in Dorset, 14·2 in Norfolk, 14·6 in Sussex, 14·6 in Hants, 14·6 in Lincoln, and 15·0 in Devon. The rates in 1877 in the counties where the population is principally engaged in mining and in skilled labour ranged from 15·0 in North Wales, 15·1 in Worcester, 15·4 in Cheshire, and 15·7 in Stafford, to 18·5 in Nottingham, and to 18·7 in the East Riding of York and in Lancaster; in London the rate was 19·0.

In Dorset and Nottingham the rate was slightly in excess of the average, while in Cumberland and North Wales it was considerably above the average, but in nearly all the other counties the rate was below the average of the preceding ten years. The counties of Cambridge, Durham, Northumberland, and Monmouth were conspicuous for a rate much below the average.

Some of the general causes which have contributed to the fluctuation in the number of marriages in England and Wales during the past thirty-nine years are shown in Table 85.

In the ten years in the table (1839-48) preceding the period when the Act relating to free trade came into operation the average price of wheat was high, 58s. 7d. per quarter, and there were great fluctuations in the marriage rate.

In the first five years of the decade the average price of wheat fell gradually from 70s. 8d. per quarter in 1839 to 50s. 1d. per quarter in 1843; but the hopes and prospects of the people were depressed, so the marriage-rate declined from 15·9 in 1839 to 15·2 in 1843. The most noteworthy events of the period were the chartist riots in 1839, and the turn-out of cotton spinners and great general distress in 1842, when the depression reached a crisis and expressed itself in the lowest marriage-rate (14·7) recorded since the commencement of civil registration. Previously to 1842 the country had suffered from four successive bad harvests.

In the second half of the decade (1844-48) the marriage-rate rose, but the potato disease in England and Ireland, and three deficient harvests in 1845, 1846, and 1848, together with a commercial panic, brought the rate down to 15·8 in 1847, the year when 10,000,000*l.* were voted for the relief of the Irish who were suffering from famine. During these ten years just reviewed (1839-48) the quantity of wheat imported into the United Kingdom, and retained for home consumption, never exceeded 12,000,000 cwts.

In the five years 1849-53 the mean marriage-rate was high; it increased from 16·2 in 1849 to 17·5 in 1852, and notwithstanding the very deficient harvest in 1853, the rate rose to 17·9 in that year. This is the highest marriage-rate on record. During this period (1849-53) the duty on corn was reduced to 1s. per quarter; gold was discovered in Australia, the great exhibition was opened, and owing to free trade the quantity of foreign wheat imported began to increase; in 1853 it reached 20,913,000 cwts.; the average price of wheat was low, and in 1851 reached a minimum price of 38s. 6d. per quarter.

The five years 1854-8 witnessed some events of great importance; in 1854 there was an extremely good harvest, but war was declared against Russia, and the year 1857 was memorable for the Indian mutiny and for a great commercial panic; all these events had a depressing effect on the prospects of the community, and the marriage-rate declined from 17.2 in 1854 to 16.5 in 1857 (and notwithstanding a good harvest) to 16.0 in 1858.

In the decade 1859-68 the annual marriage-rate was 16.8. In the first five years of this period, although provisions were cheap, the marriage-rate fell to 16.3 in 1861, and to 16.1 in 1862, when great distress prevailed in the cotton districts of Lancashire, owing to the temporary disruption of the United States; in both these years the harvest was deficient. For the first three years (1864-6) of the second lustre, the marriage-rate was high, and the price of wheat comparatively low, but the effects of the rinderpest which broke out in 1865 and was not stamped out as an epidemic until about the middle of 1867, and the great monetary panic in London in 1866, soon made their impression on the rate, and it fell from 17.5 in 1866 to 16.5 in 1867, and to 16.1 in 1868, the year of the Abyssinian war. The year 1866 was memorable as the commencement of a period of commercial depression which lasted until the end of 1870. From the year 1868, owing to the ravages of the cattle plague, both beef and mutton rose considerably in price. In each of the three years 1865-7 the harvest was deficient.

The next five years, 1869-73, comprised two (1869-70), when trade was dull and the marriage-rate was low. In 1869 the duty on corn ceased, but in this and the following four years the harvest was deficient. In the last three years (1871-3) of this lustre the country revived; the year 1871 witnessed a remarkable rise in prices and in the wages of labor and commerce and manufactures recovered from the languor of the previous five years; but a year or two afterwards a reaction set in, wages were greatly reduced, and these three years of prosperity were followed by four years (1874-77) of commercial difficulties and stagnation in trade. There was an abundant harvest in 1874, but in 1875-7 the harvests were unsatisfactory, trade was depressed, strikes were prevalent, and commercial failures were experienced. All this was expressed in the marriage-rate of the country, which rose from 15.9 in 1869 and 16.1 in 1870 to 16.7 in 1871, 17.5 in 1872, 17.6 in 1873, and fell to 17.1 in 1874, to 16.8 in 1875, to 16.7 in 1876, and to 15.8 in 1877. The marriages in the last ten years experienced nearly as great fluctuations as they did in the decade previously to the introduction of free trade.

The gradual increase in the supply of foreign wheat, a few years after the duty on corn was reduced, is remarkable. Thus the number of cwts. of wheat imported into the United Kingdom to every 100 of population in the five years 1854-8 was 54, whereas in the five years 1859-63 the proportional number was 94.

In the four years 1863-6 when the price of wheat was low, there was a considerable reduction in the quantity imported, but in 1867 when the price rose to 64s. 5d. per quarter, after two or three deficient harvests, a new impetus was given to the importation of corn, and the foreign supply still further increased; the average number of cwts. imported in the five years 1869-73, to every 100 of population, was 121, and in 1874-7 it was 144.

In 1877 the number of cwts. imported for home consumption was no less than 53,347,482 or 159 cwts. to every 100 of population, an enormous increase compared with the quantity in 1846 (8,592,458 cwts.) immediately before free trade was in operation.

Forms of Marriage.—194,352 marriages were celebrated during the year 1877; 142,396, or 73.3 per cent., according to the rites of the Establishment, and 51,956, or 26.7 per cent., otherwise.

Of the marriages according to the rites of the Established Church 18, or .01 per cent., were by special license, 16,365, or 11.55 per cent., by license, 121,820, or 85.96 per cent., after banns, and 3,511, or 2.48 per cent., by Superintendent Registrar's certificate.

In my last report I drew attention to the fact that in the English Church for some reason or other opinion has, since 1861, set in favor of marriage after the proclamation by banns of the names of bride and bridegroom in the face of the congregation. The subjoined table shows the proportion of marriages by license, banns, and Superintendent Registrar's certificate at different periods, after correction for imperfect returns. Thus, the number of marriages by license increased from 15 per cent. in 1841-5 to 16 per cent. in 1856-60, and then gradually fell off to 12 per cent. in 1876. The number of marriages after banns declined from 83 per cent. in 1841-5 to 81 per cent. in 1856-60, after which period the number gradually increased, until in 1877 the proportion per cent. reached 86.

TABLE VII.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-77.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS of MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.				
	Total.	Special License.	License.	Banns.	Superinten- dent Registrar's Certificate.
1841-45 - -	100	.01	15.42	83.28	1.29
1846-50 - -	100	.01	15.47	82.39	2.13
1851-55 - -	100	.01	15.58	81.53	2.88
1856-60 - -	100	.01	16.01	80.88	3.10
1861-65 - -	100	.01	14.93	81.94	3.12
1866-70 - -	100	.01	13.56	83.43	3.00
1871-75 - -	100	.01	11.58	85.71	2.70
Year 1876 - -	100	.02	11.89	85.50	2.50
" 1877 - -	100	.01	11.55	85.96	2.48

In 682 instances,* or .48 per cent., in 1877 the clergy omitted to state under which of the foregoing heads the marriages should be recorded: this is a comparatively large number, and only 16 fewer than the previous year, so that although the number of such imperfect returns has gradually decreased in previous years there was no improvement in 1877, as will be seen by the subjoined results, showing to every 1000 marriages according to the rites of the Established Church the number of cases in which the words "by license," "by banns," or "by Superintendent Registrar's certificate" were omitted in the years 1841-77:—

Years.	Mean Annual Number.
In the five years 1841-45 - - -	159
" " 1846-50 - - -	122
" " 1851-55 - - -	41
" " 1856-60 - - -	29
" " 1861-65 - - -	25
" " 1866-70 - - -	20
" " 1871-75 - - -	7
Year 1876 - - -	5
" 1877 - - -	5

* These 682 cases have been proportionally distributed over the foregoing headings.

Although the proportional number of cases was nearly the same in each of the years 1876 and 1877 the results in the annexed table show that the proportions varied considerably in the different Registration Divisions in the two years.

TABLE VIII.—To every 1000 MARRIAGES according to the RITES of the ESTABLISHED CHURCH in each of the 11 REGISTRATION DIVISIONS the NUMBER of INSTANCES in which the CLERGY omitted to state whether the MARRIAGE was by LICENSE, by Banns, or by SUPERINTENDENT REGISTRAR'S CERTIFICATE.

—	1876.	1877.
ENGLAND - - -	4·69	4·79
London - - - -	1·15	0·73
South-Eastern Counties - -	8·14	11·16
South Midland Counties - -	9·71	10·17
Eastern Counties - - -	13·83	10·11
South Western Counties - -	10·98	11·38
West Midland Counties - -	5·38	6·08
North Midland Counties - -	4·22	4·48
North Western Counties - -	0·68	1·00
York - - - -	3·38	3·00
Northern Counties - -	3·71	3·63
Wales - - - -	7·59	5·70

Of the 51,956 marriages not according to the rites of the Establishment, 8,277, or 15·93 per cent., were solemnized in the registered places of Roman Catholics, and 21,905, or 42·16 per cent., in the registered places of other Christian denominations, and 21,269, or 40·94 per cent., took place in the offices of Superintendent Registrars without any religious rite. Seventy-eight, or ·15 per cent., were celebrated according to Quaker rites, and 427, or ·82 per cent., were marriages of Jews.

First Marriages; Re-marriages.—The number of men who married in 1877 was 194,352; of these, 167,443 were bachelors, and 26,909 were widowers; 158,798 of the bachelors married spinsters; and 8645 bachelors married widows. Of the 26,909 widowers who re-married 16,238 wedded spinsters, and 10,671 wedded widows.

Of the same number of women who married, 175,036 were spinsters, and 19,316 were widows; 158,798 of the spinsters were wedded to bachelors, and 16,238 to widowers. Of the widows, 10,671 were re-married to widowers, and 8645 to bachelors. The number of persons who re-married in 1877 was 46,225.

The number of marriages of divorced persons in 1877 was 82, or 8 fewer than in 1876. Of 38 divorced men who re-married, 26 married spinsters, and 11 married widows. Of 45 divorced women who re-married, 30 married bachelors, and 14 married widowers. There was one marriage in which both parties had been divorced.

Ages at Marriage.—It has still to be regretted that in a large proportion of cases the marriage registers are imperfect as to age: thus of the 194,352 couples who married in 1877 the precise ages of both parties were not stated in 41,957 instances, the age column of the marriage register in these cases being filled in by the officiating minister or by

the registrar of marriages with the words "of full age," "minor," or "under age;" such imperfect returns amounted to 21·6 per cent. of the total marriages, a reduction of only 1·2 from the per-centage of the previous year.

The gradual improvement which has taken place in England during the last 20 years is shown in the subjoined table :—

TABLE IX.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER in ENGLAND, 1858–77.

YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8
1865	35·1	1875	23·7
1866	33·6	1876	22·8
1867	33·5	1877	21·6

The returns, as to age, continue to be very incomplete in London, the proportional number of cases in which the ages of both parties were not stated in 1877 being 40·4 per cent. In the South Midland, South-western, South-eastern, and Eastern counties the proportions were high. The returns were more complete in the mining and manufacturing counties than in and around London; thus, in Yorkshire the ages of both parties were omitted to be stated in only 8·7 per cent. of the total marriages, in the Northern counties the proportional number was 9·9, in Monmouthshire and Wales 13·9, and in the North-western counties 15·2.

The annexed table shows the proportion of imperfect returns in each of the years 1876 and 1877 in each registration division of England and Wales :—

TABLE X.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER, in each REGISTRATION DIVISION in 1876 and 1877.

GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.		GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	
	1876.	1877.		1876.	1877.
Yorkshire - - -	8·0	8·7	Eastern Counties - -	23·0	24·2
Northern Counties - -	11·2	9·9	South Eastern Counties -	27·7	24·8
Monmouthshire and Wales	14·5	13·9	South Western Counties -	26·8	25·3
North Western Counties -	15·7	15·2	South Midland Counties -	28·3	27·1
West Midland Counties -	20·1	17·9	London - - - -	43·9	40·4
North Midland Counties -	21·9	21·5			

If the clergy, especially of London, would endeavour to cause the precise ages to be returned at the time of registering a marriage it would not only enhance the statistical value of these national records, but it would also be in the interest of the parties themselves to return their precise ages, for tracing pedigree, and for other purposes of personal identification.

The mean age at marriage as determined from the 304,790 men and women whose ages were stated in the year 1877, including the re-married, was 27·9 years for men, and 25·8 for women. For 133,110 bachelors it was 25·7 years, and for 138,305 spinsters 24·4 years. The mean age at marriage of 19,285 widowers was 43·0 years, and of 14,090 widows 39·6 years. These mean ages are almost exactly the same as those of ten years ago.

Minors.—A comparison of the number of minors married with the *total marriages* indicates, though less accurately than a comparison of the number of minors married with the number of minors living, the increasing tendency to early marriage. The results in Table 8. of the preliminary tables show that the proportional numbers marrying under 21 years of age gradually increased from 1848 to 1874, after which they began to decline. Thus the proportion of minors to 100 marriages attained its maximum (15·54) in 1874, and probably owing to the depression of trade gradually declined until in 1877 it fell to 15·07. The proportion has increased at a greater rate among men than among women.

The annexed table shows the proportions in periods of five years from 1841.

TABLE XI.—PROPORTIONS per Cent. of MINORS who MARRIED, 1841–77.

PERIODS of Five Years.	To every 100 Marriages the annual proportion under 21 Years of Age.	
	Males.	Females.
1841–45	4·38	13·33
1846–50	4·48	14·23
1851–55	5·45	17·28
1856–60	5·94	18·65
1861–65	6·55	19·87
1866–70	7·08	20·84
1871–75	8·15	22·22
Year 1876	8·25	21·99
„ 1877	8·11	22·03

The counties which generally show the highest proportions of marriages of minors were enumerated in my 38th Annual Report.

15,758 males and 42,815 females married in 1877 under 21 years of age; therefore to every 100 males married 8·11 were under age, and to every 100 females married 22·03 were under age.

Signature in Marriage Registers.—A fresh impetus has been given to education during the last 25 years, and this will probably account for the decrease in the proportional numbers of men and women who sign the marriage register with marks. Of the 70,237 persons who signed with marks in 1877, 29,707 were men, and 40,530 were women, so the

men were better educated than the women, the proportion to every 100 marriages being 15·3 for men against 16·3 in the previous year, and for women 20·9 against 22·1 in the previous year. Thus the number of both sexes unable to affix their names to the marriage register is still comparatively large, being equal in 1877 to 18·1 per cent.

The results in the subjoined table show the improvement that has taken place during the last thirty-seven years.

TABLE XII.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS, 1841-77.

PERIODS of Five Years.	To every 100 Marriages the annual proportion who signed the Marriage Register with Marks.		Quinquennial Decrease in the proportions who signed with Marks.	
	Men.	Women.	Men.	Women.
1841-45	32·6	48·9	1·2	2·7

	1876	31·9	37·3

Buildings registered for the solemnization of Marriages.—The number of these buildings on the register on the 31st of December 1877 was 8,051 being an increase of 255 during the year, to which number the Presbyterians of all descriptions contributed 10, the Independents 35, the Baptists 44, the Roman Catholics 15, the Unitarians 3, the various sects of Wesleyan Methodists 111, the Calvinistic Methodists 21, the New Jerusalem Church one, and other religious denominations 16, whilst the Countess of Huntingdon's Connexion showed a decrease of one.

Certified Places of Meeting for Religious Worship.—The number of certified places of meeting for religious worship on the register on the 31st of December 1877 was 19,546, being an increase of 482 during the year. The following is a list of the descriptions of the congregations on whose behalf places have been certified. Those printed in italics have been added since the publication of the list in the last Report :—

Advents.	Free Christians.	Quakers.
Apostolics.	Free Church.	Ranters.

BIRTHS.

The number of births registered in 1877 was 888,180 being in excess of the number registered in the previous year. The marriage-rate in the three years 1875-7 was lower than that of the previous three years, and this, to some extent, kept down the birth-rate of 1877, which was nevertheless as high as 36·2 per 1000 of population, a rate somewhat below that of 1876 (36·6), but above the average of the last ten years (35·6).

Compared with the preceding year the only counties in which any increase is observed in the birth-rate in 1877 are Sussex, Suffolk, Devon, Warwick, Rutland, East Riding of York, Cumberland, and the counties of North Wales.

The disparity between the rates in the different counties, owing primarily to difference in the several industries carried on, is remarkable.

If the birth-rate for the whole of England and Wales be taken as a standard, viz. 36·2, there were fourteen counties containing the great centres of the mining and manufacturing industries with high birth-rates, ranging from 37·5 in the counties of South Wales to 43·5 in Durham, and averaging 39·8.

There were as many as thirty counties with birth-rates below this standard, in which the rate averaged 31·5, and ranged from 27·6 in Dorset to 36·1 in Cheshire.

London showed a rate of 36·3, as usual approximating to that of England and Wales.

Sex.—The enumeration of the population of England and Wales at the various Censuses shows that there is an excess of females living over males living, and it is noteworthy that this excess is greater now than it was some years ago.

TABLE XIV.—PROPORTIONAL NUMBER OF MALES LIVING to every 100 FEMALES LIVING (exclusive of the portion of the Army, Navy, and Merchant Seamen abroad).

Census Years.	To 100 Females the Number of Males in England and Wales.
Mean of 1821-31 - -	96·35
„ 1831-41 - -	95·87
„ 1841-51 - -	95·80
„ 1851-61 - -	95·51
„ 1861-71 - -	94·96

Thus to every 100 women living in England and Wales at the Censuses of 1821 and 1831 the mean proportional number of men living was 96·35, but this number fell in 1841 and 1851 to 95·80, and fell still further in 1861 and 1871 to 94·96.

This disparity in the proportion of males and females living is attributable to the higher rate of mortality, and the much greater amount of emigration among males than among females. The emigration returns of 1877 show the relative proportion of the *sexes* of emigrants of *English origin*; when they have been published for a series of years they will throw some light on this interesting point. The number of male emigrants of *English origin* in 1877 was 39,829 and of female 23,882.

More boys than girls are born every year in England and Wales. In 1877 the boys were in the proportion of 103·6 to every 100 girls. The proportions of the sexes are perhaps regulated by some natural law in operation immediately preceding, or at some early stage of, intra-uterine life; probably several other causes also exert their influence, such as the social status and relative ages of the parents at marriage. The excess in the births of males over those of females is believed to be greater among first-born children than it is among those born afterwards.

To whatever influences the relative proportion of the sexes at birth is due, it is well known that an excess in the number of boys born prevails not only in England but among all European races.

Dr. Bertillon and others have collected facts which throw some light on this interesting subject. In the meantime I wish to draw attention to the remarkable fact that this excess in the proportional number of boys born to girls born in England and Wales is less than it was, as will be seen by the subjoined table.

TABLE XV.—PROPORTIONAL NUMBER OF MALES BORN TO FEMALES BORN.

Years.		Males born to every 100 Females born.
In the 10 Years 1838-47	-	105·0
„ „ 1848-57	-	104·6
„ „ 1858-67	-	104·4
„ „ 1868-77	-	103·9

Children born out of wedlock.—The births of 42,155 illegitimate children were registered in England in 1877. This number is 561 in excess of that in 1876, and 1342 in excess of the number in 1875, but considerably below that recorded in previous years; thus the average annual proportion per cent. of illegitimate to total births has declined from 6·4 in the ten years 1855-64, to 5·7 in the ten years 1865-74, and to 4·7 in the three years 1875-77. The results in these three years represent the proportional numbers since the operation of the recent Act by which the registration of births was rendered compulsory.

The counties showing the lowest rates in these three years were Middlesex (*extra-metropolitan*) 3·4, Durham 3·8, Surrey (*extra-metropolitan*) 3·9, Monmouth 3·9, Essex 4·0, Warwick 4·0, Kent (*extra-metropolitan*) 4·3, Hants 4·4, Lancaster 4·4, Gloucester 4·5, Hunts 4·5, Somerset 4·5, South Wales 4·5. The rate in London was as low as 3·7. The counties with the highest rates in these three years were:—Nottingham 6·0, Suffolk 6·0, Cornwall 6·1, Bedford 6·5, North Wales 6·7, Hereford 7·1, Westmorland 7·5, Cumberland 8·2, Norfolk 8·2, and Salop 8·3.

As the rate of illegitimacy in the different counties is, as a general rule, influenced by the proportional number of spinsters living at the child-bearing ages, I thought it would be interesting to keep up the subjoined table which appeared for the first time in my last annual report, and by which it will be observed that in the mining and manufacturing counties such as Durham and Stafford, where the proportional number of unmarried women aged 20-40 enumerated in 1871 was low, the rates of illegitimacy were also low, whereas in the counties of Cumberland, Norfolk, and Salop, with high proportional numbers of spinsters, the per-centage of illegitimate children was also high.

TABLE XVI.—PROPORTION of ILLEGITIMATE CHILDREN to every 100 BIRTHS in the several COUNTIES of ENGLAND and WALES in 1855-64, 1865-74, and in 1875-7.
[Counties arranged according to rates prevailing in 1875-7.]

Norfolk - - - -	10.5	9.6	8.2	39.9
Shropshire - - - -	9.7	9.2	8.3	40.9

A great reduction in the rate of illegitimacy has taken place during the last $16\frac{1}{2}$ years (reckoning from the middle of each of the periods 1855-64 and 1875-7): the reduction per cent. reached 39 in Leicestershire, 35 in Cheshire and Nottinghamshire, 34 in Derbyshire and the North Riding of York, 33 in Essex and Lancashire, 32 in South Wales and Wiltshire, 31 in Berkshire, and 30 in Durham. Indeed, in the whole of England and Wales the fall in the rate in the $16\frac{1}{2}$ years was not less than 27 per cent.

DEATHS.

500,496 deaths were registered in the year 1877 out of an estimated population of 24,547,309, so the mortality was at the rate of 20·4 per 1000.

The death-rate of the previous year (1876) was low, 21·0; but the rate in 1877 was remarkably low and only thrice before in 40 years has it fallen below 21·0, viz., in 1845 (20·9), in 1850 (20·8), and in 1856 (20·5).

Measles was epidemic in some parts of the country, and the deaths from whooping-cough were numerous, but those from scarlet fever and fever were below the average number and—probably owing to a cool summer—diarrhoea was also less fatal than usual; London, however, suffered from an epidemic of small-pox.

Mortality increases in some proportion to density of population, so the death-rate in the urban districts of England and Wales is always in excess of that in the rural districts. In the five years 1851-5 (when the average annual rate of mortality was 25·5 in the urban, and 20·1 in the rural districts) this excess was as great as 27 per cent., but in the two years 1876-7 (when the annual rate was 22·4 in the urban, and 18·4 in the rural districts) the excess was only 22 per cent.

The reduction in the death-rates during these $23\frac{1}{2}$ years (reckoning from the middle of each of the above periods 1851-5 and 1876-7) is equal to 12·2 per cent. in the urban, and 8·5 per cent. in the rural districts.

Testing the mortality of town and country populations in these two ways, it will be observed, first, that the difference between their respective rates has been reduced; and, secondly, that this reduction is chiefly due to the improved sanitary condition of the urban districts.

There has also been an improvement in the health of the rural districts, but not to the extent observed in the urban districts, partly, perhaps, because attention has been concentrated more on the town than on the country districts, and partly because the towns were much more unhealthy than the country, and therefore afforded greater scope for sanitary effort; but the results are encouraging, and show how much the health of the community is under the control of skilful sanitation.

TABLE XVII.—ANNUAL RATE OF MORTALITY per 1000 in the TOWN and COUNTRY DISTRICTS of ENGLAND AND WALES in the 31 Years 1847-77.

Sex and age.—The numbers of males and females who died in the year 1877 were respectively 260,567 and 239,929. The death-rate of males was 21.8 per 1000 males living; that of females 19.0 per 1000 females living. The average rates in the 25 years 1848-72 were 23.5 for males and 21.4 for females. The deaths of males in the year were as 109 to 100 deaths of females; the average of 40 years being 104 to 100. These proportions are derived from the deaths among unequal numbers living of males and females, for there is an excess of females in the population. The deaths in 1877, were there *an equal number of both sexes* living, would be in the proportion of 115 deaths of males to every 100 deaths of females.

A comparison of the death-rates at different ages in 1877 with the rates in the previous year shows that the reduction in the total mortality in 1877 was mainly due to a much lower rate among children. The exceptionally low mortality from zymotic diseases of childhood, especially summer diarrhoea, is remarkable.

TABLE XVIII.—ANNUAL RATE OF MORTALITY per 1000 Living in ENGLAND AND WALES at DIFFERENT AGES in 1848-72, and in 1877.

Compared with the mortality in the 25 years 1848-72 the death-rate in 1877 was less at every period of age among males except at ages 35-65, and less among females at every period except at ages 65-75.

Seasons.—The meteorological phenomena of the first three months of 1877 differed in many respects from the average. The mean temperature of the air ($42^{\circ}\cdot3$) was remarkably high being $3^{\circ}\cdot6$ in excess of the average of the preceding 105 years, and Mr. Glaisher reports that there were but six instances during that period of so high a mean temperature in a March quarter. In January it was as much as $6^{\circ}\cdot2$ in excess, in February it was $4^{\circ}\cdot9$ in excess of the average, and in March it was near the average. 135,000 deaths were registered during these three months, and the mortality was at the comparatively low annual rate of 22·3 per 1000 of the estimated population, the average for the corresponding season in the ten years 1867-76 being 24·3. The rain-fall in these three winter months at the Royal Observatory, Greenwich, measured 8·3 inches or 3·3 inches above the average of the preceding 62 years. In January alone rain fell during 23 days and measured as much as 4·35 inches causing extensive inundations.

The weather continued exceptional during the first two months of the second quarter. There were considerable alternations of temperature until about the middle of April, when a cold period followed, and the mean

temperature of the month of May was $3^{\circ}\cdot6$ below the average. Sometimes the night temperatures of this month were so low that great damage was done to vegetation. From the 3rd June the weather was warm and the mean temperature of the month was $3^{\circ}\cdot1$ above the average. But these exceptional meteorological conditions did not operate very unfavourably on the public health, for the mortality ($21\cdot4$) in the second quarter of the year was only slightly above the average ($21\cdot1$) of the preceding ten years. For the entire quarter the mean temperature ($51^{\circ}\cdot9$) and also the rain-fall ($5\cdot3$ inches) were slightly below their averages. In April the fall of rain was $1\cdot5$ inches above, in June $1\cdot3$ inches below, the average.

With the exception of the warm temperature from 13th to 21st August the weather in the *third* quarter of the year was cold and ungenial. The mean temperature of the quarter was $58^{\circ}\cdot5$ or $1^{\circ}\cdot2$ below the average of the season in 106 years. The month of September was cold and showed a deficiency of temperature of $3^{\circ}\cdot7$ compared with the average, and the rain-fall of this month was remarkably small. The fall of rain for the entire quarter measured $6\cdot4$ inches, being one inch below the average amount observed during the last 62 years. The cool summer temperature caused an exceptionally low mortality from infantile diarrhoea so that the death-rate in the third quarter of the year from all causes was remarkably low ($17\cdot7$), indeed it is the lowest rate in forty years, excepting in 1860, when the mortality of the corresponding quarter was but $17\cdot2$.*

The mean temperature of the air in the last quarter of the year was $45^{\circ}\cdot0$, the average for the previous 106 years being $43^{\circ}\cdot5$. The total rain-fall at Greenwich was $6\cdot9$ inches, the average quantity for the preceding 62 years being $7\cdot1$ inches. The highest and lowest readings of the barometer in the year, in the neighbourhood of London, occurred during this quarter; the highest was on 20th December $30\cdot517$ inches, and the lowest was on 11th November, $28\cdot549$ inches, giving a range of $1\cdot968$ inches. The weather in the month of October was generally fine, but there was a severe gale on the 14th. November was for the most part cloudy and wet with rapid changes of temperature and atmospheric pressure, but the mean temperature of this month was as high as $45^{\circ}\cdot5$ being $3^{\circ}\cdot2$ in excess of the average of the preceding 106 years. December was foggy and damp, and though almost sunless the mean temperature was $1^{\circ}\cdot7$ above the average. The meteorological conditions of these three months did not, however, appear to affect prejudicially the public health, for the mortality was at the annual rate of $20\cdot2$ against an average in the preceding ten years of $21\cdot9$.

Locality.—For purposes of immediate local sanitary administration it is necessary to obtain the number and causes of deaths, and afterwards the death-rates of comparatively small areas, such as the registration sub-district, or the urban and rural sanitary district; still, for many purposes of statistical comparison and investigation, the death-rate of the registration county is useful.

In every county of England and Wales the rate of mortality at all ages was lower in 1877 than the average in the ten years 1867–76 except in Rutland and in Monmouth; and as low as or lower than the rate of the preceding year, except in Oxford, Northampton, Cambridge, Suffolk, Wilts, Warwick, Rutland, Durham, Monmouth, and South Wales.

The death-rate of England in the year under review was $20\cdot4$ per 1000, and there were thirty-two counties with a lower rate than this ranging from $14\cdot8$ in the extra-metropolitan part of Surrey to $20\cdot3$ in Derby. The mortality in the other counties ranged from $20\cdot5$ in North Wales to $24\cdot8$ in Lancaster. In London the rate was $21\cdot9$ against $22\cdot3$ in the previous year.

* For further remarks on the temperature of this summer quarter and its effect on infant mortality from diarrhoea, see Quarterly Return, No. 115, 1877, page vii.

DEATH-RATES OF CHILDREN.

Children under one year of age.—In the year 1877 the proportional number of deaths of infants to births in seventeen of the twenty English towns was lower than in the previous year, but in Bristol, Birmingham, and Plymouth the rates were higher.

The towns are arranged in Table XIX., in the order of their average annual death-rates in the seven years 1870–76; comparing these average death-rates with those in the year 1877, a remarkable improvement is observed. This satisfactory result in each of the twenty towns is chiefly attributable to causes which have already been noticed.

TABLE XIX.—PROPORTIONAL NUMBER OF DEATHS OF CHILDREN under ONE YEAR of AGE from ALL CAUSES to 1000 BIRTHS REGISTERED in ENGLAND AND WALES, and in TWENTY LARGE TOWNS, 1870–77.

* The rates for England and Wales are for the complete years, and not for the 52 or 53 weeks.

In England and Wales in 1877 the proportional number of deaths of infants to every 1000 births was 136. In Portsmouth it was 133, in

Sunderland 143, in Sheffield 145, in London and in Wolverhampton it was 146, in Bristol the rate was the same as the average for the twenty towns, 154. The death-rates were highest in 1877, in Leicester 189, Liverpool 188, Nottingham 169, Leeds 165, and Birmingham 163.

Children under 5 years of age.—Any excess or defect in the mortality of children under 5 years of age, above or below the average, indicates a rise or fall in the general death-rate at all ages. The death-rates of children of this age in the large towns in the year 1877 are shown in the subjoined table. The towns are arranged in the order of their average annual death-rate in the four years 1873-6.

TABLE XX.—ESTIMATED POPULATION, DEATHS, and ANNUAL RATE OF MORTALITY, of CHILDREN under FIVE YEARS OF AGE, in TWENTY LARGE TOWNS, 1873-77.

* Mean in three years 1871-3.

NOTE.—The deaths of children under five years of age in sixteen of the above towns were supplied by the Medical Officers of Health.

Compared with this average, the decrease in the mortality of children in 1877 in each of the towns, is remarkable, but more especially so in Newcastle-upon-Tyne, Bradford, Leeds, Sheffield, Leicester, and Nottingham.

Among those with the lowest mortality of children in 1877, Portsmouth stands first with a death-rate of 50·9, then follow Brighton 59·0, Norwich 62·4, Sheffield 66·4, Sunderland 66·6, Newcastle-upon-Tyne 66·9. Among the towns with the highest death-rates in 1877, were Liverpool 89·6, Salford 85·2, Birmingham 84·1, and Manchester 83·1, and Glasgow 81·9.

A comparison of columns 3 and 4 in the Table XXI. (where the counties are arranged in the order of the death-rates under 5 years of age) shows how much the death-rate at *all ages* in the several counties is affected by the mortality of children under 5 years. This relation between the death-

rate of children under 5 years of age, and that at all ages, is seen more strikingly in the five groups of counties at the foot of the table.

* By the death-rate in cols. 5 and 6 is meant the proportional number of deaths of children under one year of age to every 1000 births.

There is no doubt that an exceptionally large proportion of children in a population conduces to a high death-rate, inasmuch as the mortality at early ages, even in a community living under comparatively healthy conditions, is much higher than among adults; thus in the five groups of counties the total mortality follows the same order as the proportions of children living to 10,000 at all ages shown in columns 8 and 9.

There is another cause, however, for the high mortality in some counties, especially in those forming the first group, viz., that they contain large towns with dense populations. Thus Lancashire comprises the towns of Liverpool, Manchester, Salford, and Oldham, then follows Monmouthshire comprising Newport. London stands third, then follow Staffordshire comprising Wolverhampton, and Warwickshire comprising Birmingham, then Nottinghamshire including Nottingham, Leicestershire including Leicester, Durham including Sunderland, and the West Riding of York including Bradford, Leeds, and Sheffield.

It will be seen for the whole country, in Table XXII., how the mortality of the population in the aggregate is made up of deaths occurring at different ages; thus, the death-rate at all ages in 1875 was 22·82 per 1000 of population, in 1877 it was 20·39, so the reduction in the rate in 1877 at all ages was 2·43 per 1000 of population, of which 1·03 was at ages under 5 years.

TABLE XXII.—ENGLAND. PROPORTIONAL MORTALITY at DIFFERENT AGES per 1000 of POPULATION living at ALL AGES.

AGE.	25 Years 1848-72.	1875.	1876.	1877.	Reduction in Rates in 1877 compared with 1875.

Deaths in Public Institutions in England.—Increased hospital accommodation, especially in large towns, is greatly needed for the treatment of persons suffering from infectious diseases.

The following table shows the number of hospitals of all classes in England and Wales in each of the nine years 1869 to 1877. The number in 1877 was 644.

TABLE XXIII.—NUMBER OF DEATHS REGISTERED IN HOSPITALS IN ENGLAND AND WALES in each of the Nine Years 1869-77.

YEARS.	HOSPITALS.				
	Number of Hospitals.	Increase in the number of Hospitals during the Year.	DEATHS.		
			Persons.	Males.	Females.
1869	241	—	9,747	6377	3370
1870	266	25	10,479	6829	3650
1871	346	80	13,706*	9002	4604
1872	450	104	11,638	7927	3711
1873	500	50	11,209	7594	3615
1874	544	44	11,963	8020	3934
1875	582	38	12,548	8494	4054
1876	611	29	12,354	8148	4206
1877	644	33	12,570	8332	4238

* The large number of deaths recorded in 1871 is owing to the epidemic of small-pox from which the country was suffering in that year. Many temporary hospitals were erected to meet the requirements of persons suffering from this disease.

The number of these institutions has increased from 500 in 1873 to 644 in 1877, but this increase of 144 is mainly attributable to additional accommodation afforded for the sick in cottage hospitals.

The deaths of men in hospitals are about double those of women in each year owing chiefly to men being more exposed in their occupations to accidents and injuries than women.

An enumeration of the patients in hospitals shows that the males are chiefly agricultural and general labourers; seamen; shoemakers; domestic servants; cabmen, coachmen, carmen, carters; carpenters and joiners; coal miners; bricklayers; messengers and errand boys; horse-keepers and grooms; plumbers, &c.; while the female patients are chiefly domestic servants, milliners, dressmakers, and seamstresses; laundresses and washerwomen; charwomen; cotton workers, &c., &c.

The abstracts relating to public institutions show the number of deaths registered in each registration division and county, and in each sub-district, in the year 1877. The total deaths registered in England and Wales were 500,496, out of which number 49,332, or 10 per cent., occurred in 1448 public institutions of England and Wales. Of these 49,332 deaths, 32,096, or 65 per cent., occurred in 721 workhouses, workhouse infirmaries, or workhouse schools, 12,570, or 26 per cent., in 644 hospitals or infirmaries; and 4666, or 9 per cent., in 83 lunatic asylums; so of the total number of persons who died in England in 1877, one out of 10 took place in one or other of 1448 public institutions, one out of 16 occurred in a workhouse, one out of 40 in an hospital, and one out of 107 in a lunatic asylum. Only those deaths registered in workhouses, hospitals, and infirmaries, and public lunatic asylums are returned, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions, and the abstracts of such deaths afford the means of correcting the mortality, which in some districts and sub-districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.*

Deaths in Public Institutions in London.—A reprint of the table published in my Annual Summary for 1877, showing the number of deaths registered in *all* public institutions of London, is appended to this Report.†

* See Introductory note p. 99.

† See Preliminary Table, No. 41.

In the fifty-two weeks of that year 14,936 deaths were registered in 172 public institutions. Of every 1000 of these deaths, 611 occurred in fifty-eight workhouses, 4 occurred in twelve prisons, 5 in two military asylums, 289 in thirty-eight general hospitals, 41 in forty-one hospitals for special diseases, 5 in five lying-in hospitals, 14 in four military and naval hospitals, 8 in three hospitals for foreigners, and 23 in nine lunatic asylums.

PROGRESS OF REGISTRATION.

Names on the Registers, and Searches.—The names of 1,777,380 persons, whose marriages, births, or deaths were recorded in the registers during the year 1877 have been added to the printed alphabetical indexes of this office.

The indexes now comprehend an aggregate number of names amounting to 57,657,729, and extend over a period of 40½ years, viz., from the middle of 1837 to the 31st December 1877.

Table XXIV. exhibits the increase in the annual number of searches, but the figures are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

TABLE XXIV.—TOTAL AND AVERAGE ANNUAL NUMBER OF SEARCHES, 1845-77.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845-9 -	4,758	952	In the year 1845 -	8.0
„ 1850-4 -	8,344	1,669	„ 1850 -	7.9
„ 1855-9 -	17,425	3,485	„ 1855 -	11.1
„ 1860-4 -	35,127	7,025	„ 1860 -	19.1
„ 1865-9 -	56,544	11,309	„ 1865 -	24.2
„ 1870-4 -	91,458	18,292	„ 1870 -	33.7
In the year 1875 -	25,407	25,407	„ 1875 -	47.0
„ 1876 -	26,762	26,762	„ 1876 -	47.9
„ 1877 -	27,030	27,030	„ 1877 -	46.9

The provisions of the Registration Act are becoming more generally known by the legal profession, and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, or employed as messengers, &c. for post office purposes.

The greatest number of registration certificates issued is of those relating to births, the number issued of deaths is somewhat less than that of births, and the number issued of marriages is considerably less than the number issued either of births or deaths.

The total number of searches in 1877 (including those relating to the non-parochial and other records) was 27,721, and the number of certificates issued was 22,377.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1877 was 4211*l.* 13*s.* 6*d.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report, pp. xxi-ii.

UNITED KINGDOM.

At the middle of the year 1877 the population of the United Kingdom was estimated to be about 33,446,930. The marriage-rate (persons married to 1000 of population) was 14·6, and the birth-rate and death-rate were 34·5 and 20·0 respectively.

The estimated population of Ireland was 5,338,906, against 5,321,618 in 1876, showing an estimated increase of 17,288 persons. The subjoined table shows the number of emigrants from Ireland (Natives) in each year from 1851 to 1877.* During the years 1866–7 emigration from this part of the United Kingdom was comparatively small.

TABLE XXV.—NUMBER OF NATIVE EMIGRANTS FROM IRELAND in each Year from 1851 to 1877.

Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.
1851*	152,060	1856	90,781	1861	64,292	1866	99,467	1871	71,240	1876	37,587
1852	190,322	1857	95,081	1862	70,117	1867	80,624	1872	78,102	1877	38,503
1853	173,148	1858	64,337	1863	117,229	1868	61,018	1873	90,140		
1854	140,555	1859	80,599	1864	114,169	1869	66,568	1874	73,184		
1855	91,914	1860	84,624	1865	101,407	1870	74,555	1875	51,462	Total 1851–77	2,453,481

* From the 1st of May, the date at which the collection of these returns commenced.

The marriage-rate in Ireland in 1877 was 9·3, but this requires correction for defective registration, owing chiefly to the neglect of the Roman Catholic clergy.† The birth-rate was 26·2, and the death-rate was 17·5.

The estimated population of Scotland at the middle of 1877 was 3,560,715. The marriage-rate was 14·5, the birth-rate 35·6, and the death-rate 20·8.

Owing to a difference between the marriage laws of Scotland and England, the marriage-rate in England is higher than that in Scotland.

The English birth-rate was 36·2 per 1000 of population, the Scottish 35·6, and the Irish 26·2. As the proportion of married women aged 15 and under 55 to the female population at all ages is considerably lower in Ireland than in England, the number of legitimate births in Ireland, assuming the same degree of fecundity to prevail in both countries, must necessarily be less than the number in England.

The English (20·4) and Scottish (20·8) death-rates were nearly the same. The Irish death-rate, owing chiefly to defective registration, was only 17·5, but the mortality in each division of the United Kingdom was remarkably low during the year 1877.

MORTALITY OF THE ARMY.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad.

The average strength of the Army at home and abroad in the year 1877 was 190,502, and the number of deaths was 1801; so the rate of mortality was 9·5 per 1000 of strength, or 1·9 per 1000 below the rate in the preceding year.

* See Dr. Burke's report on "*Emigration Statistics of Ireland*" for the year 1877.

† See Thirteenth Annual Report of the Registrar General of Ireland, p. 29.

The average strength of the Army at home was 101,904, and the deaths were 856: the rate of mortality per 1000 strength was 10·7 among officers, and 8·3 among non-commissioned officers and men, the average annual rates in the 16 years 1861-76 being 10·0 and 11·0 respectively; so the mortality among officers serving at home in 1877 was 0·7 per 1000 above the average, while that of the non-commissioned officers and men serving at home was 2·7 per 1000 below the average.

TABLE XXVI.—ANNUAL RATE OF MORTALITY per 1000 among OFFICERS and NON-COMMISSIONED OFFICERS and MEN in the ARMY AT HOME and ABROAD, 1861-77.

YEARS.	AT HOME.		ABROAD.	
	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.
Annually in the 16 years } 1861-76 - - - }	10·0	11·0	13·9	17·8
In the year 1877 - - -	10·7	8·3	12·5	10·6
Excess or defect in 1877 -	+0·7	-2·7	* -1·4	-7·2

The average strength of the Army abroad was 88,598, and the deaths were 945. The rate of mortality per 1000 of strength was 12·5 among officers, and 10·6 among non-commissioned officers and men, against an average annual rate in the 16 years 1861-76 of 13·9 and 17·8 respectively. The mortality among officers serving abroad in 1877 was, therefore, 1·4 per 1000 below the average, while that of non-commissioned officers and men serving abroad was 7·2 per 1000 below the average.

Forty per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 12 per cent. in Ireland, and 46 per cent. abroad.

MORTALITY OF THE NAVY.

Inspector-General T. R. Pickthorn, of the Royal Navy reporting to Sir A. Armstrong, M.D., K.C.B., F.R.S., the Director-General of the Medical Department, states that the sanitary condition of the Navy in the year 1877 was very satisfactory. The total force in the service afloat was 44,940; the deaths were 317, and the mortality per 1000 force was 7·1.

Compared with the mortality in the previous year (when it was exceptionally high, owing to a large number of fatal injuries) there was a reduction in the death-rate from all causes of 2·1 per 1000. The number of deaths in the total force from disease was 221, and from wounds, injuries, and drowning 96. The death-rate from disease alone in 1877 was 4·9, against 6·0 in the previous year; from violence, including drowning, the death-rate in 1877 was 2·1 against 3·2 in the previous year.

Compared with the average of the 14 previous years, there was a decrease in the death-rate of 3·3 per 1000, and in the cases placed on the sick list of 106·3 per 1000. In the ratio of invaliding there was an increase of 1·5 per 1000.

TABLE XXVII.—MORTALITY in the ROYAL NAVY at the different STATIONS during the Years 1875-77.

* Including 35 deaths from a boiler explosion in Her Majesty's ship "Thunderer."

† Including the deaths by the loss of Her Majesty's ship "Captain."

‡ Including the deaths by the loss of Her Majesty's ship "Bombay."

Of the 221 deaths from disease, 12 were referred to enteric fever, 12 to remittent fever, 6 to cholera, 46 to consumption, 11 to apoplexy, 15 to heart diseases, 8 to aneurism, 21 to pneumonia, 9 to dysentery, 25 to other diseases of the digestive organs, 8 to kidney diseases, and 4 to delirium tremens. Of the 96 deaths from violence, 45 were caused by wounds and injuries, 2 by burns and scalds, 42 by drowning, and 7 by suicide.

Of 100 deaths from all causes at all ages, forty-three were at ages 15-25, twenty-nine were at ages 25-35, twenty-one were at ages 35-45, and seven were at ages 45 years and upwards.

The mean force employed on the *home* station was 21,000, and the deaths were 130, being in the proportion of 6.2 per 1000, against 9.5 in the previous year, showing a reduction of 3.3 per 1000. The mortality from disease on this station was 4.7 per 1000 force, from violence 1.5 per 1000; against 5.8 and 3.7 in the previous year. The high mortality from violence in 1876, was chiefly owing to a boiler explosion in Her Majesty's Ship "Thunderer," whereby 35 officers and men lost their lives.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Act 37 and 38 Vict. c. 88. commanding officers of British ships not in Her Majesty's service (and commanding officers of foreign vessels trading to or from any port of the United Kingdom) are compelled, under a penalty, to transmit returns of *all* births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me, and commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships, are entered in a book kept for the purpose at this office called the *Marine Register Book*. The numbers recorded in the year 1877 were 354 births and 4338 deaths.

287 births of children and 646 deaths occurred among passengers on board merchant vessels at sea.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of mariners at sea, exclusive of masters, in registered vessels, in the year 1877 was 196,562. The deaths from all causes (including some of those which occurred on board colonial and fishing vessels) were 4181, and the rate of mortality was 21·3 per 1000 of strength. The average annual mortality in the 26 years 1852-77 was 21·4 per 1000.

In the subjoined table the mortality in the merchant service by *drowning* is compared with the mortality in the Royal Navy from the same cause.

TABLE XXVIII.—DEATHS BY DROWNING in the MERCHANT SERVICE and in the ROYAL NAVY in the Twelve Years 1866-77.

YEARS.	MERCHANT SERVICE.							ROYAL NAVY.		
	Strength.	Deaths by Drowning.*			Mortality per 1000 Strength.			Strength.	Deaths by Drowning.	Mortality per 1000 Strength.
		By Wreck.	By Accident.	Total.	By Wreck.	By Accident.	Total.			
1866	196,871	1171	1219	2390	6·0	6·2	12·2	49,475	65	1·3

1868	197,502	1785	1141	2926	9·0	5·8	14·8	51,220	78	1·5
1869	195,420	1770	1069	2839	9·0	5·5	14·5	48,820	75	1·5
1870	195,962	1655	989	2644	8·5	5·0	13·5	46,710	564†	12·1
1871	199,738	1500	976	2476	7·5	4·9	12·4	47,400	49	1·0
1872	203,720	1324	973	2297	6·5	4·8	11·3	46,830	67	1·4
1873	202,230	2231	1032	3263	11·0	5·1	16·1	45,440	48	1·1
1874	203,606	1819	1040	2859	8·9	5·1	14·0	44,530	78	1·8
1875	199,667	1526	987	2512	7·6	5·0	12·6	44,360	41	0·9
1876	198,638	1237	1033	2270	6·2	5·2	11·4	45,010	53	1·2
Average in the 11 Years 1866-76	199,025	1631	1051	2682	8·1	5·3	13·4	47,350	109	2·3
1877	196,562	1461	1077	2538	7·4	5·5	12·9	44,940	42	0·9

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those "reported" in each year.

† Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

Thus the total number of mariners drowned in 1877 was 2538 or 12·9 per 1000 strength, viz., 7·4 by wreck, and 5·5 by accident.

The average annual rate in the 11 years 1866-76 was 13·4, viz., 8·1 by wreck, and 5·3 by accident.

The number of deaths by drowning in the Royal Navy in the year 1877 was only 42 out of a total strength of 44,940, and the death-rate was 0·9 per 1000; the average annual rate in the 11 years 1866-76 was 2·3 per 1000.

WILLS.*

The number of probates and administrations granted at the Principal Registry during the year ending 31st October 1877 was 17,178. The value of the effects was sworn under 72,650,940*l*.

* See Judicial Statistics, England and Wales, 1877, Part II., pp. 18, 19.

The number of probates and letters of administration granted in the 40 district registries during the year was 27,483. The value of the property under which these probates and administrations were sworn was 52,896,964*l*.

The results for the Principal and District Registries combined were—probates and administrations 44,661—value of effects sworn under 125,547,904*l*. The average value of each was 2811*l*. against 2779*l*. in the previous year. The proportion of the cases in which people dying above the age of 21 left wills, or left estates on which letters of administration were taken, was 1 in 6, or 17·0 per cent.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

EUROPEAN STATES.

Through the courtesy of the superintendents presiding over the statistical departments of the respective European states, I am enabled to publish for the year 1876 some approximative results, showing the comparative fecundity of married women in the different States.

I pointed out in my 27th Annual Report,* that to ascertain the number of births to a marriage (unless the marriage-rate is stationary) the annual births should be divided by the annual marriages of some previous year. In the following results it has been assumed, in the absence of more precise information, that the interval between the mean age of mothers at marriage, and the mean age at the births of their children, is the same in England and in other countries, as it is in Sweden, viz., about six years. The legitimate births in 1876 have therefore been divided by the marriages of six years earlier date. Thus in Sweden the number of legitimate births in the year 1876, to the *average* annual number of marriages in six years earlier date (1869, 1870, 1871) was 4·84, so the number of children to a marriage in Sweden appears to be nearly the same as the number in England, viz., 4·63.

In Italy the proportional number of births to a marriage was apparently highest, 5·15; but this is probably owing to the fact that all the marriages are not at present registered. Prussia stands next in order of greatest fecundity, and the proportional number was 4·92. In the Netherlands it was 4·83, nearly the same as it was in Sweden. In Belgium it was 4·48, nearly the same as it was in Spain; in Denmark it was low (4·24), and in Austria still lower (3·73), while it was lowest in France, viz., 3·42.

TABLE XXIX.—COMPARATIVE FECUNDITY in different EUROPEAN STATES.

YEARS.	European States.	Births to a Marriage.
1876	Italy - -	5·15
"	Prussia - -	4·92
"	Sweden - -	4·84
"	Netherlands - -	4·83
"	England - -	4·63
"	Belgium - -	4·48
1870	Spain - -	4·47
1875	Denmark - -	4·24
"	Austria - -	3·73
"	France - -	3·42

* p. xx.

The respective rates of marriage, birth, and death in the several European States in the year under review are compared in Table XXX. with those of four previous years (1873-76) as they were undisturbed by any fluctuations from war.

The marriage-rate (persons married to 1000 of population) in 1877 was higher in Denmark, in the German Empire, in Prussia, and in the Netherlands, than it was in England. It was lowest in Austria and Sweden, but it was below the average of the four previous years (1873-6) in each of the seven European States from which returns had been received.

TABLE XXX.—EUROPEAN STATES.

COUNTRIES.	AVERAGE ANNUAL RATES per 1000 POPULATION.								
	PERSONS MARRIED.			BIRTHS.			DEATHS.

France - - -	15.9	16.6	15.1	26.1	26.2	25.6	24.4	22.6	21.7
Spain* - - -	15.1	—	—	37.2	—	—	29.7	—	—
Italy* - - -	15.4	16.0	15.3	37.4	37.0	36.7	30.2	29.9	28.1

* The mean annual rates for Spain are for the ten years 1861-70, those for Italy are for the ten years 1863-72.

NOTE.—The detailed returns relating to the vital statistics in Foreign States will be found in a series of tables on pp. cix-cxv.

In England the marriage-rate was much below the average, but in Austria and the German Empire the depression was still more marked.

Arranging the countries according to their respective birth-rates in 1877, it will be observed that the German Empire has the highest rate; then follow Austria, Italy, the Netherlands, England, Denmark, Sweden, and France. The birth-rate in Austria and in France was lower than the average of the four previous years, but in nearly all the other States the birth-rate in 1877 was near the average.

The death-rate was highest in 1877 in Austria, Italy, and the German Empire, while Sweden and Denmark had the lowest death-rates; indeed lower than the rate in England.

The death-rate in each of the European States in 1877 was below the average of the four previous years. The average death-rate in Hungary (45.0) was remarkably high.

This, Sir, is the last Annual Report that I shall have the honour of submitting to you.

It has been my good fortune to preside over this Department since 1842, and in the course of this year I intend to resign my appointment, as I do not wish to take a *fourth* Census.

In 1842 Civil Registration was in its infancy; it has been my study to prove that the usefulness of that institution, foretold at its commencement, is realised.

Previously to 1838, marriages of Roman Catholics and of Non-conformists could only be solemnised by ministers of the Established Church; during the last 40 years the Public have had the option of being married in Roman Catholic and in Non-conformist chapels, or in register offices without religious ceremony, in addition to parish churches. Upwards of 100,000 persons in each year now avail themselves of this privilege; 60,000 in chapels, 40,000 in register offices.

Previously to 1838, the only documents recognised as attempting to establish the date of birth were the parish registers of *Baptisms* kept by ministers of the Established Church; and they furnished no real proof of the exact age of the infants whose baptisms were recorded; during the last 40 years the actual date of birth has been registered together with full particulars as to parents and locality. About 900,000 of these births are annually recorded.

Previously to 1838, *Burials* only were entered in Parish Registers kept by ministers of the Established Church; during the last 40 years deaths have been recorded in the Civil Register, wherein are stated the place and cause of death, the exact names, occupation, and age of the deceased; more than 500,000 of these deaths are annually registered.

Statutes provide that, if in these Civil Registers any particular be falsely recorded wilfully, severe penalties are incurred—even penal servitude.

These are improvements which must, I think, be universally acknowledged.

It has been my endeavour in Weekly, Quarterly, and Annual Reports to inform the Public what deductions and inferences may be derived from the facts recorded in these registers; and I venture to express a hope that, in promoting the study of sanitary subjects, such reports may have been of some use.

Great provision is made for the safe custody of these Civil Registers accessible to the Public in every Poor Law Union, and safeguards are provided against improper alterations of entries being made in them. Copies of these registers and of marriage registers kept by ministers of the Established Church are transmitted to this office, where annually nearly 2,000,000 of names are indexed in strictly alphabetical order.

About 60,000,000 of these separate entries are here accessible to the Public, who in large numbers apply for certified copies under the seal of this office, nearly 30,000 searches being made in a single year.

Here, Sir, I may perhaps be permitted to acknowledge the great improvement made in the system of civil registration by the Statute 37 & 38 Vict. c. 88., which under your auspices was passed in 1874.

It would ill become me to omit mention of the 7,000 registration officers and deputies by whom this great national work is quietly executed at comparatively small cost.

I have no hesitation in assuring you that they admirably perform their simple but important duties.

Of course in the work of so large a number there must be opportunities for captious critics to have the pleasure of noticing practices not altogether in accordance with official regulations; but I maintain that such opportunities are rare. I should be ungrateful if I did not here record the

gratuitous assistance that I have during a long series of years received from registration officers in furnishing me periodically and with marvellous punctuality returns enabling me to issue to the public my Weekly and Quarterly Reports—returns for which they receive no remuneration.

Under this roof I leave for my successor an admirable staff of most efficient civil servants, who have been engaged in assisting me to take three Censuses, and who from their long experience thoroughly understand the duties assigned to them, and execute those duties with an intelligence, assiduity, and regularity I cannot praise too highly.

Lastly, I must express to Dr. Farr, whom in 1842 I had the good fortune to find here presiding over the Statistical Branch, my grateful acknowledgment of the important services he has ever since continually rendered.

He is acknowledged throughout Europe, the United States, East Indies, and the Colonies as one of the first statist of the day.

To his scientific researches and reports I attribute any reputation that may have accrued to the General Register Office of England and Wales from the time he accepted office in this Department.

I have the honour to be,

Sir,

Your faithful servant,

GEORGE GRAHAM,

Registrar-General.

REMARKS ON THE METEOROLOGY OF 1877.

By JAMES GLAISHER, Esq., F.R.S., &c.

THE following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer were very low at the beginning of the year, till January 9th the average daily deficiency of pressure was 0·57 inch; from January 10th to January 19th the pressure was that of its average, the readings being a little in excess for a day or two and a little in defect alternately; from January 20th to February 9th, with the exception of January 25th and January 30th, the pressure was in excess, and for these 21 days the average excess was 0·22 inch; from February 10th to 27th there was an average daily defect of 0·20 inch; then for 4 days there was a daily excess of 0·22 inch; this was followed by a long period of low pressure extending to April 11th, the average daily deficiency for these 39 days was 0·33 inch; till April 20th the mean pressure was that of its average, three days being below and five a little above the average; from April 21st to the end of the month the readings were low, the average daily deficiency was 0·16 inch. The first four days in May the readings were 0·24 inch in excess daily; from the 5th to the 15th the pressure was low, the deficiency being 0·22 daily; they were then high till the 26th, being 0·26 in excess daily; from May 27th to June 9th they averaged 0·32 in defect. A moderately high period set in and continued till the 20th, the mean daily excess for these 16 days was 0·10 inch; three days of low readings followed, the mean defect being 0·22 inch; then eight days of moderately high readings, the average daily excess of pressure was 0·16 inch; to June 30th the readings had been below their averages on 105 days and above on 76 days. For the first few days in July the pressures were nearly those of their averages; from the 7th to the 11th they were in excess of the average to the amount of 0·20 inch daily; from the 12th to the 24th there was a deficiency of pressure daily to the average amount of 0·27 inch; then till August 6th there was a slight excess averaging 0·11 inch daily; from August 7th to September 15th there was a general slight deficiency of pressure, on a few days it was that of its average, and on a few others a little in excess; the average of the 40 days ending September 15th was 0·11 inch in defect of the average. This was followed by nearly as long a period of a general excess of pressure. For the 36 days ending October 21st there was a mean daily excess of 0·25 inch of pressure; this was succeeded by nine days of low barometer readings, the mean defect being 0·18 inch daily; then three days of excess, whose average was 0·27 inch: this was followed by low readings for 10 days, the defect of pressure from November 4th to 13th was 0·42 inch daily; five days of high readings followed, the excess being 0·33 inch daily. From November 19th to December 1st, the readings were continually low and the average deficiency of these 13 days was 0·43 inch; from December 2nd to December 23rd, with the exception of the 6th, 7th, 12th, and 13th, the barometer readings were high, particularly on the 19th and 20th, the average daily excess of pressure was 0·21, and from December 24th to the end of the year the average daily defect was 0·36 inch. From July 1st to December 31st the readings had been below their averages on 95 days and above on 89 days. In the year the three days of greatest departure below their averages were January 1st 1·043 inch, March 25th 0·941 inch, and November 19th 0·964 inch; and the three days of greatest departure above their averages were January 21st 0·720 inch, October 6th 0·775 inch, and December 20th 0·635 inch.

The highest reading of the barometer in the year at the height of 160 feet above the level of the sea was 30.517 inches on the 20th of December, and the lowest was 28.549 inches on the 11th of November; the yearly range was 1.968 inches. The mean monthly range of the barometer varied from 1.1 inch at extreme southern stations to 1.3 inch at extreme northern stations.

Temperature.—The weather was warm from the 1st of January till the 19th of February, the average excess of temperature for these 50 days was $6^{\circ}.1$, causing the winter of 1876-7 to be exceptionally mild. On February 20th a period set in which was distinguished by several days of temperature below their averages, and then followed by a smaller number of days of temperature above their averages; and this variation of temperature, alternately warm and cold, continued till March 23rd; the average daily deficiency of temperature for the 26 days ending March 23rd was $2\frac{1}{2}^{\circ}$. From March 24th to April 11th the weather was warm, and the average daily excess of mean temperature was about 3° . On the 12th of April a cold period set in and lasted until June 2nd; the coldest days in this period were from May 1st to the 6th, and their average deficiency of temperature was as large as $11\frac{1}{2}^{\circ}$; at many places on these days the highest temperature reached was below 50° , the temperature of the air at night generally varying from 22° to 32° only. The average deficiency of mean temperature for the 52 days ending June 2nd was 4° daily. From the 3rd of June to the end of the month the weather was somewhat warm, and the average excess of temperature was $2\frac{1}{2}^{\circ}$. The weather from the 1st of July till the 12th of August was for the most part cold and ungenial; on the 13th a somewhat warm period set in, but only lasted till the 21st; the mean excess of daily temperature for this period was $4\frac{1}{4}^{\circ}$. For the 43 days ending August 12th the deficiency of temperature was $1\frac{1}{4}^{\circ}$. From the 22nd of August until the end of September the weather was almost continuously cold, and at times painfully so, particularly from the 15th to the 25th of September, when the wind was constantly blowing from the north. The average deficiency of temperature for the 40 days ending September 30th was $3^{\circ}.1$, and the mean temperature of the month of September proved to be *lower* than in any September back to 1803, or a period of 74 years. The month of October opened fine and dry, with a low temperature; on the 14th there was a severe gale, causing great destruction of property all over the country. Till the 19th of October the weather was cold, and the deficiency of temperature for the 19 days was $4\frac{1}{4}^{\circ}$. From October 20th to November 4th the weather was mostly warm, but it was occasionally cold; upon the average of these 15 days there was an excess of $2\frac{1}{4}^{\circ}$. On November 5th a considerable increase of warmth took place, and continued till the gale of the 11th day (and on which day the lowest reading of the barometer in the year took place), the average daily excess for these seven days was $7\frac{1}{4}^{\circ}$; on the 12th, immediately following the gale, a considerable depression of temperature took place, and from this day until the 28th of December the changes of temperature from warm to cold and vice versa were frequent, the warm periods being somewhat longer than the cold; the average of the 47 days ending December 28th was $\frac{3}{4}^{\circ}$ in excess of daily temperature. The year closed with three fine warm days, whose mean temperature was $8\frac{1}{4}^{\circ}$ in excess of the average. The month of December (with the exception of the last three days) was very dark, and almost sunless.

The highest temperature of the air in the year was $87^{\circ}.5$ at Salisbury, and the lowest was $13^{\circ}.0$ at Allenheads.

Rain-fall.—The fall of rain in January was excessive, and about London it fell on almost every day during the first half of the month; and during the whole month it fell on six days out of seven. The amount measured at Greenwich was 4.35 inches; and we have no instance of so

large a fall in the preceding 62 Januaries. The average fall for January is 1.85 inch, so that more than double the average fell in January; this is even more remarkable as the fall in December 1876 (see Annual Report, 1876) was so excessive. At Helston (Cornwall) there were 11 days in January on which more than a $\frac{1}{4}$ of an inch of rain fell. At Tunbridge (Kent) the total fall of rain in January was 6.38 inches, and there were no less than 27 wet days in the month: through this excessive rain-fall the meadows by the river were under water on no less than nine days. At Cockermouth the fall of rain in January was 8.53 inches, whilst at Holkham the fall in the same month was only 2.50 inches.

The fall of rain in February was 1.7 inch, being 0.2 inch above the average, the fall in March was 2.2 inches, or 0.6 inch above the average, and in April was 3.2 inch or 1.5 inch above the average; the total fall in the four months ending April 30th, was 11.5 inches, being no less than 4.8 inches above the average. The fall of rain in May was 1.4 inch, being 0.7 inch below the average, in June was but 0.7 inch, being 1.3 inch below the average, and in the preceding 62 Junes there are but seven instances of so small a fall of rain as in the year in question. In July the total fall of rain was 2.4 inch, or 0.2 inch below the average; in August it was 2.9 inches, or 0.5 inch above the average; in September it was 1.1 inch, or 1.3 inch below the average; and since 1815 there have been but nine instances when the fall of rain in September was as small as 1.1 inch. The fall in October was 1.7 inch, being 1.1 inch below the average, in November it was 3.4 inches, 1.1 inch above the average, and in the preceding 62 Novembers, there have been but eleven instances of so large a fall of rain in November as 3.4 inches. At Cockermouth the fall of rain in November was 9.86 inches, being higher than at any station; it was the wettest November *there* for 16 years, and the fall has not been equalled in any one month since October 1862, when it was 10.4 inches. On the 11th of November (the day of the great gale) the fall of rain at Guernsey was 1.65 inch, at Weybridge was 1.58 inch, and at Marlborough was 1.65 inch, and on this day scarcely any rain fell either in the Midland or Eastern Counties. The fall of rain in December was 1.8 inch, being 0.2 inch below the average. The total fall in the year was 26.9 inches, being 1.6 inch above the average of the preceding 62 years.

The heaviest total falls of rain in the year were 61.93 inches at Allenhurst, 59.94 inches at Stonyhurst, and 59.29 inches at Cockermouth, and the least total falls were 23.85 inches at Cambridge, 25.01 inches at Leicester, and 26.45 inches at Holkham. The greatest number of wet days were 252 at Nottingham, 249 at Eccles, and 246 at Stonyhurst, and the least number of wet days were 173 at Cardington, 176 at Osborne, and 177 at Gloucester.

Wind.—The prevalence of the wind during the year was S. and W.; in every parallel of latitude the ratio of the S. and W. to the N. and E. was as 2 to 1. During the year the horizontal movement of the air was greater than usual; it was 312 miles a day. The general average is 257 miles. The average weekly movement for the year was 2,184 miles; the nearest large values to this were in 1869, 2,043 miles; in 1876, 2,036 miles; in 1868, 2,029 miles; in 1872, 1,998 miles; in 1867, 1,981 miles. The general weekly average is 1,801 miles. The hourly horizontal movement of the air in 1877 was 13.1 miles, exceeding the general average by 2.4 miles per hour.

The greatest number of miles of horizontal movement of the air in one day was 893 miles on January 30th, and the least number was 67 on December 20th.

The total horizontal movement in the year was 113,943 miles.

Thunder storms occurred on 80 different days during the year. The greatest number of days in one month was 10 in April, and the least 3 in February.

At the same stations the total number in 1876 was 70.

Thunder was heard, but lightning was not seen, on 48 days in the year, of which 11 days were in August, and 8 in June, but in January, November, and December *thunder was heard*, but on one day only in each of these months.

The total number from the same stations in 1876 was 71.

Lightning was seen, but thunder was not heard, on 51 days during the year, 11 of which occurred in November, a rather unusual circumstance.

The total number in the year 1876 was 57.

Solar Halos were seen on 80 days in the year, and the number of days was pretty equally distributed in each month.

The number in the year 1876 at the same stations was 85.

Lunar Halos were seen on 65 nights in the year : May, June, July, and September, were generally free from lunar halos.

The number in the year 1876 at the same stations was 60.

Aurora Boreales were seen on three days only during the year, viz. 1 day in January at Guernsey, and 2 days in December at Torquay.

Snow fell on 71 days in the year; 17 of these were in March, 14 in January, 12 in December, 11 in February, 6 in both March and April, 4 in November, and 1 in October. The falls in January were most severe in the north, and in February, March, and December the falls of snow were pretty general over the country.

In the year 1876 the number of days on which snow fell was 77.

Hail fell on 109 different days during the year. The greatest number of days in any month was 20 in March, and the least 3 in August and September; in June *no* hail fell.

In the year 1876 the number of days on which hail fell was 80.

Fog prevailed on 149 days during the year (being 11 days less than the number recorded in 1876), and they were distributed as follows :— January 19, February 8, March 18, April 14, May 9, June 10, July 5, August 7, September 11, October 17, November 13, and December 18.

PRELIMINARY TABLES.
(1877.)

TABLE 1.—Estimated Population, and Number of Marriages, Births, and Deaths registered in England, in each of the Forty Years 1838-77.

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,009	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,106	246,232	492,574	338,984	153,590

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841-51-61-71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, see Table 69.

TABLE 2.—Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England, in each of the Forty Years 1838-77.

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.

1873 - -	17.6	35.5	21.1	57	28	47
1874 - -	17.1	36.2	22.8	59	28	45
1875 - -	16.8	35.5	22.8	60	28	44
1876 - -	16.7	36.6	21.0	60	27	48
1877 - -	15.8	36.2	20.4	63	28	49
Mean in 40 years	16.5	34.1	22.2	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 214 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between the ordinary year of 365 days and the leap year.

TABLE 3.—Proportions of Persons Married, of Births and of Deaths to 1000 of the Population of England, during the Forty Years 1838-77.

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING.		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.
MEAN OF 40 YEARS.						
Forty years 1838-1877 -	16.5	34.1	23.2	61	29	45
MEAN OF 10 YEARS.						
Ten years 1841-1850 -	16.1	33.6	23.4	62	31	45
Ten years 1851-1860 -	16.9	34.1	23.2	59	29	45
Ten years 1861-1870 -	16.6	35.2	22.5	60	28	45
MEAN OF 5 YEARS.						
Three years 1838-1840 -	15.6	31.3	23.4	64	33	45
Five years 1841-1845 -	15.7	33.4	21.4	64	31	47
Five years 1846-1850 -	16.5	33.8	23.3	61	31	43
Five years 1851-1855 -	17.2	33.9	22.7	58	29	44
Five years 1856-1860 -	16.7	34.4	21.8	60	29	46
Five years 1861-1865 -	16.8	35.1	22.6	59	28	44
Five years 1866-1870 -	16.4	35.3	22.4	61	23	45
Five years 1871-1875 -	17.1	34.6	22.0	59	28	45
Two years 1876-1877 -	16.3	36.4	20.7	62	28	49

Note.—The mean rates in this table are the averages of the rates prevailing in each of the forty years given in Table 2.

TABLE 2.—Marriages in England in each of the Thirty-seven Years 1841-77; those solemnised according to, and not according to, the Rites of the Established Church; Civil Marriages; and detailed information respecting the Marriages in the Churches of the Established Church.

Mean Annual Rate per 1000 in each quarter during the 40 years	12·7	16·8	15·9	12·6				

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.
 * These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 8.—Marriages in England. The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks**, and of Persons who were **Widowers or Widows**, in each of the Thirty-seven Years **1841-77**.

1877	230,341	223,248	213,195	221,515	38·0	36·5	34·5	35·8
Mean Annual Rate per 1000 in each Quarter during the 40 years					35·7	35·3	32·9	32·7

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, see note to Table 7.

TABLE 16.—Proportional Number of Births in England in each Quarter to 1000 Births in the Average Quarter* of each of the Forty Years 1838-77.

YEARS.	NUMBER OF BIRTHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF BIRTHS.				
		IN THE AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

Average proportion in 40 years, 1838-77			22·2	23·3	21·3	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 22·4 deaths of males; to every 1000 females living there were 21·5 deaths of females; and to each 100 deaths of females there were 105 deaths of males. The last column shows the relative mortality of males and females; and that out of equal numbers living the deaths of males were as 109 to every 100 deaths of females in 1838.

Mean Annual Rate per 1000 in the four Quarters of the 40 years					24·8	22·0	20·5	21·8

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 263 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, see note to Table 7.

TABLE 22.—Proportional Number of Deaths in England in each Quarter to 1000 Deaths in the Average Quarter* of each of the Forty Years 1838-77.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column of Table 38 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

The areas taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not so extensive throughout the seven years. The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County, Poor Law, and Lunatic Asylums, situated within the Districts or sub-districts here taken as representing the town, or by the exclusion of deaths proportioned to the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the town is situated outside that area.

LS 39.—Population, Births and Deaths, and Rates of Mortality, during the Year 1877 in Fifty large Town Districts.

TOWNS.	ESTIMATED POPULATION in the middle of the Year 1877.	REGISTERED during the Year 1877.		ANNUAL RATE to 1000 living during the Year 1877.			DEATHS under One Year to 1000 Births registered.	DISTRICTS and SUB-DISTRICTS, taken as approximately representing the several Towns.

E.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.
F.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.
 * method of framing these estimates see note * to Table 40. As the population of Devonport, Blackclee, and Ashton-under-Lyne between 1811 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the population of the inhabited houses in these boroughs.
 † Rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in Cos and Lunatic Asylums, situated within the Districts or Sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area. The Workhouse is situated outside that area.

TABLE 40.—Population; Persons to an Acre; Births and Deaths; Annual Birth and Death Rates; Mean Temperature and Rainfall, in the 52 Weeks of the Year 1877, in LONDON and TWENTY-TWO other LARGE TOWNS of the UNITED KINGDOM.

CITIES AND BOROUGHES.	ESTI- MATED POP- ULATION in the middle of the Year 1877.*	PER- SONS to an Acre. (1877).	BIRTHS in 52 Weeks ending 29th Dec. 1877.	DEATHS in 52 Weeks ending 29th Dec. 1877. NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to those cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column, excepting those for Nottingham, Salford, Oldham, and Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1877 by the addition of 6½ times the annual rate of increase which prevailed between 1861 and 1871. The rate of increase of population in Nottingham, Salford, and Oldham having since 1871 exceeded that which prevailed during the ten years 1861-71, revised estimates have been adopted for these three boroughs, based upon special returns of inhabited houses now existing within those boroughs. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE 41.—LONDON.—Deaths in Public Institutions in the 52 or 53 Weeks of each of the Thirteen Years 1865-77.*

* This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1877 will not agree with those given on page 100, which relate to the correct year instead of the 52 weeks; moreover, in some Institutions are not in all cases included in each list.

† Previously to the year 1870 the Royal Naval Hospital at Greenwich was classed with "Military and Naval Asylums"; since that year no in-patients have been received there.

Average Number living to One Annual Death in 38 years . . .	42	45	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered in each natural year, from 1st January to 31st December. Hampshire and Lewisham did not form part of London prior to 1861.
 Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

Notes.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the District of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE 45.—Births and Deaths in 1877 in 28 Foreign Cities.

CITIES.	AREA in Square Kilometers.	POPULATION (enumerated or estimated).	BIRTHS.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.
					Births.	Deaths.	
CALCUTTA - - - -	-	429,535	-	13,592	-	31.6	Cholera 1406; fevers 3641.
BOMBAY - - - -	48.2	644,405	13,873	33,482	21.5	52.0	Cholera 2671; small-pox 958.
MADRAS - - - -	69.9	397,552	13,833	46,400	34.8	116.7	Small-pox 6753; cholera 6494.
PARIS - - - -	78.0	1,989,906	-	48,740	-	24.5	Typhoid fev. 1247; sm.-pox 14
GENEVA - - - -	-	67,829	1,730	1,585	25.5	23.4	-
BRUSSELS - - - -	9.0	188,609	5,632	4,243	29.9	22.5	Small-pox 123.
AMSTERDAM - - -	14.3	280,081	10,875	7,500	37.5	25.9	Measles 186; whoop.-cough 10
ROTTERDAM - - -	7.2	136,231	5,667	3,505	41.5	25.7	-

NOTE.—The numbers in this table represent the total number of searches made in the registers.

TABLE 52.—Area, estimated Population, and Marriages, Births, and Deaths registered in the United Kingdom, in the Year 1877.

	AREA IN STATUTE ACRES.	AREA IN HECTARES.	Estimated POPULATION in the middle of the Year 1877.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM	77,635,801	81,416,767	33,446,930	244,804	489,738	1,154,683	667,995
Great Britain - -	56,815,354	23,991,538	26,108,094	220,142	440,284	1,015,094	574,442
England and Wales -	37,519,221	15,102,008	24,547,809	194,832	388,704	888,800	500,498
Scotland - - -	19,406,183	7,889,530	3,560,715	25,790	51,580	126,224	73,946
Ireland * - - -	20,810,947	8,425,229	5,338,906	24,722	49,444	136,589	93,553

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE 53.—Proportion per 1000 of Marriages, Births, and Deaths to the Population of the United Kingdom, in the Year 1877.

	ACRES TO A PERSON.	HECTARES TO A PERSON.	TO 1000 PERSONS LIVING.			
			MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM - -	2.32	.94	7.82	14.6	34.5	20.0
Great Britain - - -	2.02	.82	7.88	15.7	36.1	20.4
England and Wales - -	1.52	.62	7.92	15.8	36.2	20.4
Scotland - - - - -	5.48	2.22	7.24	14.5	35.6	20.8
Ireland - - - - -	3.90	1.58	4.63	9.2	26.2	17.5

Notes.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

TABLE 54.—Population, Area, Births, and Deaths in the Islands in the British Seas in each of the Twenty-seven Years 1851-1877.

YEARS.	ISLANDS IN THE BRITISH SEAS.		ISLE OF MAN.		ISLAND OF JERSEY.		GUERNSEY AND ADJACENT ISLANDS.

TOTAL	1,558,290	5,531,102	1,196,699	258,813	8,544,913
Average annual emigration from the United Kingdom					
From 1815 to 1877					135,634
For the 10 years 1868-77					224,257

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815-24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; 140,675 in 1875; 109,469 in 1876; and 95,195 in 1877.

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 68.—RETURN of the AGES, RATING, and CAUSES of DEATH of **4,181** Seamen reported to the BOARD of TRADE in the Year 1877 as having died in the **British Merchant Service.** (*Parliamentary Return, Session of 1878.*)

TABLE 70.

ESTIMATED POPULATION OF THE UNITED KINGDOM,
(including ISLANDS in the BRITISH SEAS)
with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 69, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (see p. vii. of Vol. I. Census of England and Wales, 1871).

TABLE 71.—Logarithms of the above Populations of the UNITED KINGDOM.

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 - -	7.2122518	6.9082749	6.9141489
1811 - -	7.2679345	6.9635210	6.9702620
1821 - -	7.3283913	7.0219850	7.0326718
1831 - -	7.3878095	7.0793269	7.0941063

1876	4,429,713	31,184	62,368	135,890	80,334	14.1	30.7	19.5
1877	4,484,542	30,574	61,148	134,475	83,175	13.7	30.9	18.5

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.
† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths the highest number in any year since 1801. In 1877 scarlet fever caused 7426 deaths and diphtheria 3567 deaths.

TABLE 76.—AUSTRIA. Population, Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1853 to 1877.
(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 Venetia was included; since 1864, however, it has been excluded. The facts for Hungary and Transylvania for years subsequent to 1867 appear in Table 77.

* Census years.

† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war.

Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE 77.—HUNGARY AND TRANSYLVANIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1866 to 1877.

(Furnished by M. C. Keleti, Director of the Hungarian Statistical Department at Buda-Pesth.)

1877	38,961,900	279,094	558,188	914,576	801,954	15.1	25.6	21.7

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera prevailed in 1865-66, and was raged in 1870 and 1871.

TABLE 83.—SPAIN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTIONS PER 1000 OF THE POPULATION.

1869	16,883,986	137,120	274,240	602,287	550,000	16.2	35.7	32.6
1870*	16,935,613	105,543	211,086	599,786	509,009	12.5	35.4	30.1

NOTE.—The Population enumerated at the Census of 1860 was 15,473,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE 84.—ITALY (inclusive of VENETIA). Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1863 to 1877.

(Furnished by Professor L. Bodio, Director of General Italian Statistics.)

1877	28,010,095	214,973	429,946	1,020,037	767,517	15.3	36.7	28.1

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome, where the census was not taken until 1872) is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, without civil contract, not being legally recognized, have not been registered; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE 85.—Fluctuations in the Marriage Rate of England,

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE.	
		Current Events and General State of the Country.	Result of the Harvest.*
1839	15.9	Chartist riots. Chinese war - - - - -	Deficient - -
1840	15.6	Penny postage came into operation. Canton blockaded -	Do. - - -
1841	15.4	British expelled from Cabul. Revenue deficient - -	Very deficient -
1842	14.7	Turn-out of cotton spinners. Great general distress. Revenue deficient. Afghans defeated - - -	Above the average
1843	15.2	Continued depression in manufacturing industry. Reduced value of agricultural produce. Deficiency in revenue. Repeal agitation in Ireland. Rebecca riots in Wales - - -	
1844	16.0	After a long period of depression, the opening of the year found the country for the most part in a thriving condition, with an increasing revenue and a reviving trade -	Very good - -
1845	17.2	General prosperity of the country. Improvement in the revenue. Potato disease in England and Ireland. Short corn crops. Great increase of railway undertakings. Speculation mania, followed by commercial panic. Sikh war - - -	Deficient - -
1846	17.2	Caffre war. Free Trade Bill passed. Corn Law repealed -	Do. - - -
1847	15.8	Commercial panic. £10,000,000 for Irish relief. Act relating to Free Trade came into operation. Owing to partial failure of crops the duty on corn was suspended till March 1848 - - -	Above the average
1848	15.0	Chartist riots. Sikh war. Agitation in Ireland. Revenue deficient - - -	
1849	16.2	Cholera epidemic. Punjaub annexed. Duty on corn reduced to 1s. per quarter - - -	Above the average
1850	17.2	Improvement of trade and revenue. Diminution of pauperism. Depressed condition of the agricultural classes was the only exception to the general prosperity of the country. Caffre war ended - - -	Below the average
1851	17.2	Australian gold discovered. Great Exhibition opened -	About the average
1852	17.5	Napoleon III. Emperor. Pegu annexed - - -	Below the average
1853	17.9	Rise in the price of provisions owing to the bad harvest and to general prosperity, especially of the labouring classes; the very poor, however, suffered great privations - - -	Bad - - -
1854	17.2	War declared against Russia - - - - -	Extremely good -
1855	16.2	Russian war continued - - - - -	Below the average
1856	16.7	Russian treaty. War with China and Persia. Revenue deficient - - -	About the average
1857	16.5	Indian revolt. Great commercial panic - - -	Above the average
1858	16.0	The commercial disturbance and distress of 1857 caused the revenue to fall short of the estimates during the greater part of the year, but towards its close there were indications of improvement. The cost of the necessaries of life was lower than in 1856 or 1857 -	Do. - - -
1859	17.0	At the commencement of the year pauperism had decreased and a spirit of general contentment prevailed. Treaties of commerce were concluded between England and Russia, and also with Japan. War with China -	Under the average
1860	17.1	Commercial treaty with France. War in New Zealand. War with China; surrender of Peking. Neapolitan revolt. Annexation of Savoy and Nice to France -	Very deficient -
1861	16.3	Famine in N.W. provinces of India. Owners of cotton mills in Lancashire began to employ hands on short time. Revenue deficient. Disruption of United States -	Under the average
1862	16.1	Distress in cotton districts. Revenue deficient - - -	Much below the average - - -
1863	16.8	Continued distress in the cotton districts. Marriage of the Prince of Wales. War in New Zealand - - -	

and some of the Causes which have contributed thereto, 1839-77.

TABLE 85. (continued)—FLUCTUATIONS in the MARRIAGE RATE of ENGLAND,

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE.	
		Current Events and General State of the Country.	Result of the Harvest.*
1864	17.3	Duty on corn 3d. per cwt. War in New Zealand brought to a close	Good - - -
1865	17.5	Cattle plague. Fenian conspiracy in Ireland	Below the average
1866	17.5	Great monetary panic in London. Cholera epidemic	Very unfavourable
1867	16.5	General commercial depression, and distress occasioned by want of employment among the artisan class. Rise in the price of bread	Deficient - -
1868	16.1	Abyssinian war. Revenue deficient	Productive - -
1869	15.9	Woolwich dockyard closed. Duty on corn ceased. No healthy revival of trade since commercial crisis of 1866. Revenue deficient. Opening of Suez canal	Deficient - -
1870	16.1	Trade and commerce depressed. Franco-German war	Under the average
1871	16.7	Revival of industrial and commercial activity. Cattle disease. Rise in prices and in the wages of labour	Deficient - -
1872	17.5	The year commenced with every promise of commercial prosperity, and there was a great increase of railway traffic. Great rise in the prices of the common commodities of life, which pressed hardly upon the salaried middle classes. Payment by France to Germany of 220 million pounds sterling	Do. - -
1873	17.6	American railway panic. Reaction from the high prices and excited demands in 1871 and 1872. Trade continued moderately active	Much below the average - -
1874	17.1	Strikes and disputes between masters and men. Wages in mining, iron, and steel trades fell. Price of commodities and wages generally declined	Very good - -
1875	16.8	Iron, coal, hardware, and shipbuilding trades agitated by strikes. Repudiation by Turkey of part of its obligations. Fall in price of silver	Very unsatisfactory
1876	16.7	Reduced wages. Commercial failures	Unsatisfactory -
1877	15.8	Prevalence of strikes. The year was unfavourable for the farmer. Depression on the Continent and in United States. Political conflict in France. War between Russia and Turkey. Famine in Southern India	Do. - -

*The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal boundaries of Counties (proper). The boundaries of Registration Counties therefore differ more or less from those of the Law Unions. Some areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

I Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 52 cases of marriage after divorce, see Table 13, page lvii.

ABSTRACT OF MARRIAGES.—Marriages registered in England, pursuant to the

* For the changes made in the constitution of the Superintendent Registrar's District of Knighton (608) through the abolition of the District of Presteligne (607), see Table 46, page cxx.

† At the end of the year 1877, the number of Superintendent Registrar's Districts was 631. The numerical arrangement, 1 to 627 was adopted on 1st January 1878. Six new Superintendent Registrar's Districts, viz., Fulham (1a), Frestwich (46a), Barrow-in-Furness (48a), Middlebrough (52a), Lancaster (54a), and Pontardawe (58a), have been constituted since 1877; and two Superintendent Registrar's Districts have been abolished, viz., Shrewsbury (83a), which has been incorporated with Atoham (351), and the parishes forming the District of Presteligne (607) have been added to the Superintendent Registrar's Districts of Knighton (608), and Knighton (608).

* The Registration Counties consist of groups of Superintendent Registrar Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

Abstract of Marriages, Births, and Deaths, 1877.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1877—continued.

* The Superintendent Registrars' Districts (331 in number at the end of the year 1877) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of institutions in any District is indicated in this column of the Table by H for Hospital or Infirmary, L for Lunatic Asylum, and W for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

* The Sub-districts (2185 in number at the end of the year 1877) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *u* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1877 are given on pages 99-120.

* 14 : A.—Haggerston sub-district consists of those two divisions of the civil parish of Shoreditch, which, prior to the 1st July 1877, formed the sub-districts of Haggerston West (14 : 6), and Haggerston East (14 : 6). See Table 26, p. cxx. In this table of Births and Deaths the facts are inserted as if the alteration had taken place on 1st January 1877.

Abstract of Births and Deaths, 1877.

* 343 : 4. — The new sub-district of Kinsham was constituted on the abolition of the Superintendent Registrar's district of Prestelme (1867) from 1st July 1877. See Table 88, page cxx.

† 331 : 8 & 9. — The sub-districts of St. Mary and St. Chad, which formed the district of Shrewsbury previously to 1st October 1874, were on that date annexed, without change in their limits, to Atcham.

DEATHS IN PUBLIC INSTITUTIONS, 1877.

THE following pages contain the numbers of deaths registered during 1877 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1448 Institutions; of which 721 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 644 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1448 Institutions 49,332 deaths were registered during the year, or 9·9 per cent. of the total deaths in England and Wales, against 8·8 and 9·1 per cent. in the two preceding years; 32,096 occurred in Workhouses, 12,570 in Hospitals, and 4666 in Lunatic Asylums. Each of these totals exceeded the corresponding number in 1876, and the proportion to total deaths was 6·4 in Workhouses, 2·5 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1877.

**CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND
AND LONDON.**

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

**DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES,
AND DISTRICTS.**

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated “Heart Disease,”—in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is the disease of the organs without any further distinction.

APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES OF DEATH
in ENGLAND AND WALES, by W. FARR, Esq., M.D., F.R.S.

YEAR 1877.

SIR,

In your Report you show that the mortality in the year 1877 was exceedingly low. Upon examining the causes which have been less than usually fatal, it will be found that there was a considerable decline from 1875 in the zymotic class; a decline also in the class of constitutional diseases, and in the developmental diseases, and a slight decline in the deaths by violence. The class of local diseases was rather unusually in excess of the average.

I.—ZYMOTIC DISEASES.

Diarrhoea was much below the average. It only destroyed 601 lives in 1,000,000, the average being 891. Small-pox (higher than in the preceding four years) was much below the average; so were measles, scarlet fever, croup, whooping-cough, and fever. Rheumatism was unusually fatal, as it had been in the three previous years.

87,043 deaths occurred from zymotic diseases; 79,640 from miasmatic diseases, of which 4278 were caused by small-pox, 9045 by measles, 14,456 by scarlet fever, 2731 by diphtheria, 3910 by croup, 11,358 by whooping-cough. These diseases affect children chiefly, but in different degrees: thus, whooping-cough of the 11,358 victims counted 11,016 under 5 years of age, of whom 5968 were girls, 5048 were boys; croup of 3910 counted 3318 under 5 years of age. Measles was fatal to 8377, out of 5045, under 5 years of age, of whom 4380 were boys and 3997 were girls; small-pox was fatal to 1056, out of 4278, under 5 years of age; scarlet fever to 9377 out of 14,456; diphtheria to 1456 out of 2731. The air passages are easily obstructed in the first years of life, which will account for the excess of deaths from whooping-cough and croup; and also partly for the excess of deaths from measles in the first five years of life. Fever is a type of the diseases that are most fatal in the prime of life; thus of the 6879 deaths from enteric fever at all ages, 1131 were of children under 5 years of age, and 987 were of persons of the age 25 and under 35, the age at which the greatest number of adult deaths are recorded from that form of disease. Diarrhoea is excessively fatal in the first five years of life. Rheumatism is most fatal at the ages 25-35 and 65-75. Erysipelas caused 693 deaths of children under one year of age, and 271 of persons aged 65-75. Enthetic diseases were fatal to 2436 persons; 2085 of whom died of syphilis, 268 of stricture of urethra, 79 of hydrophobia, and 4 of glanders. The deaths from syphilis in the last three years have been 90, 89, and 86 to 1,000,000 living. In the five previous quinquennials the proportions were 37, 51, 64, 82, and 81; so that there has really been an increase in the three years over the two previous quinquennials; but at the same time there is a tendency to decline in the last two years. The great majority of the deaths were of infants in the first year of age; who it is plain had been infected by the parents. It is one of the sad features of

this disease that life is poisoned at its source; and in the efforts that are made to diminish the prevalence of the disease, we must bear in mind that not only the persons who have been guilty of actively propagating the disease are involved, but innocent children are the principal sufferers. 1551 were children in 1877 under one year of age; 171 were one and under 5; and 363 were 5 years of age and upwards of whom 205 were females, and 157 were males. Stricture of the urethra, the result of gonorrhoea in men, was the cause of 268 deaths.

Hydrophobia has been much more prevalent in the last eight years than it was previously. To 1,000,000 living less than one (0.3) death annually was ascribed in the five years 1860-4; in the next two quinquennials the proportion rose to 1.6 and 1.5 deaths; in the last three years the mortality was 2, 2, and 3. Thus the proportion was ten times as great in 1877 as in the years 1860-4; glanders is rarely fatal, and it shows no increase.

Among dietetic diseases there are some notable changes. Thus the deaths from privation which had been 5.8 declined to 2 in 1,000,000 in the last year. Purpura and scurvy were unusually fatal; the deaths which were 18 in 1,000,000 in the 25 years 1850-74, rose to 22, 26, 31 in the last three years. Alcoholism, which was fatal to 40 in 1,000,000 in the 25 years 1850-74, was fatal to 48, 46, and 47 in the three years 1875-7.

Parasitic disease was less fatal in 1877 than in previous years.

II.—CONSTITUTIONAL DISEASES.

Diathetic diseases are less fatal than they were; this decline is due to dropsy which is now frequently classed under heart or kidney diseases by which it is assumed to be caused. Gout is twice as fatal as it was fifteen years ago. There is no doubt that this is partly due to excesses of the table, which are producing more fatal effects every year, and which deserve to be watched with as much attention as alcoholism. Cancer is one of the saddest diseases to which mankind is liable; and it is unfortunately on the increase. In the five quinquennials 1850-74 the annual mortality was 302, 327, 369, 404, and 443 to 1,000,000 living; while in the last three years the annual deaths were 480, 481, and 496. This high mortality well deserves special investigation; and is recommended to the attention of the pathological society. Is there any ground for supposing that it is transmissible from person to person?

There is a decided tendency in tubercular diseases to decline; thus the annual proportion of deaths to 1,000,000 was in the five quinquennials 1850-74, 3655, 3448, 3368, 3326, and 3018: in the twenty years the decline was 637, and in the last three years there has been a further decline which has brought the number down to 2884. Unfortunately there has been a countervailing increase in diseases of the respiratory organs, so that there is reason to suspect that the change is partly due to nomenclature.

III.—LOCAL DISEASES.

The proportional number of deaths due to diseases of the nervous system was 2761 to 1,000,000. The deaths ascribed to apoplexy were 13,283 and to paralysis 11,937. 1509 deaths were ascribed to insanity, by which it must not be understood that this was the total number of insane persons who died in the year; but the number of the insane whose deaths were referable to no other disease. The greatest number of deaths was ascribed to convulsions, 24,147; that is more than one-third of the total of 67,514 deaths referred to the diseases of the nervous system. 19,236 were of infants under one year of age; of whom 11,105 were boys and 8131 were girls.

34,330 persons died of diseases of the organs of circulation. The increase has been great since 1850 when only 11,356 were referred to this

head. In the last year the increase was 2379: 820 deaths were due to aneurism; 708 to pericarditis, carditis, or endocarditis; 452 to angina pectoris, of whom 298 were males, 154 were females; 1998 to syncope; 388 to embolism or thrombosis, of whom 139 were males, 249 were females; 51 to varicose veins, of whom 15 were males and 36 were females. 29,247 deaths were returned simply as from heart disease.

88,543 deaths were ascribed to diseases of the respiratory organs; the greater number, 54,006, to bronchitis, and 23,695 to pneumonia. The mortality from these diseases was 3620 out of 1,000,000 living.

The deaths due to diseases of the digestive organs were 24,603, or 1006 out of 1,000,000 living; 499 deaths were due to ascites, of which 301 were of females, 198 of males; 1094 were the result of hernia, 565 in males and 529 in females.

Of urinary diseases 10,294 persons died; 6659 were males, 3635 females; for obvious reasons these diseases are much more prevalent and fatal in the male than in the female. Bright's disease is the most fatal disease now recognised, and to it 4763 deaths were referred of which the numbers of males and females were 2692, and 2071. Diabetes was fatal to 1006 persons, of whom 663 were males, and 343 were females. To calculus and gravel 245 deaths were directly ascribed, 206 were of males, 39 were of females. To Addison's disease 92 deaths were referred, 51 of males, 41 of females.

To the diseases of the organs of generation 1400 deaths were due, 64 in males, 1336 in females. Among the deaths of males 10 are referred to orchitis, 2 to hydrocele, 36 to disease of perineum. Of the deaths of females 355 are ascribed to ovarian dropsy, 96 to ovariectomy, 762 to disease of the uterus. The deaths due to ovarian dropsy were at a minimum in 1874 when 168 deaths were recorded; the deaths from this disease were 219 in the year 1850. In 1875 a sudden start took place and in that and in the two years following the deaths were 343, 327, and 355. To what is this due? It is impossible to say; but it is possible that in the first years of the introduction of the operation by Spencer Wells, the great care taken in the operation prevented deaths, which, now the operation has become common, are its more frequent consequences.

Diseases of the organs of locomotion occasioned 2373 deaths. Mollities ossium is mentioned as the cause of 18 deaths, five were of boys under 5 years of age, one of a man aged 20-25, 12 were of adult women.

Diseases of the integumentary system caused 2054 deaths, including 444 by phlegmon, 8 by whitlow, 584 by pyæmia, 401 by ulcer, 343 by eczema, 16 by elephantiasis.

IV.—DEVELOPMENTAL DISEASES.

71,906 deaths were due to developmental diseases; including 18,179 to developmental diseases of children, 2116 of adults, 26,078 of old people, and 25,533 to diseases of nutrition. 11,618 of the children's deaths were of children prematurely born; 4470 were referred to teething; 2091 to malformations of various kinds, namely, 844 to cyanosis, 653 to spina bifida. Here note that there is a great excess of males who died of cyanosis, and of females in the deaths from spina bifida. 3443 mothers died of metria, or of the accidents of childbirth, or 3.9 to every 1000 children born alive, the average since 1847 was 5 per 1000.

V.—VIOLENT DEATHS.

17,684 deaths by violence were recorded in the year, and this implies a mortality of 723 to 1,000,000; this is lower by 70 than was observed in the year 1875.

There has been a great decrease in the deaths by "burns," which were 138 to 1,000,000 living in 1862 and were 90 in 1877. The decline has

these persons as they were taken to the farms by horse vans and in consequence of the very bad weather in September the deaths were 100 and 105. In the last three years the deaths were 10, 104, and 105. It was 109, 102, and 92. The deaths therefore, although not increasing numerically, are comparatively small, and in the three preceding years 1874, 1875, and 1876, the number of persons who died of sunstroke was a great many more.

How far the heat was fatal, that is, whether it was a great cause of death, varies in different parts of the country. At some of the best of the summer resorts the deaths were more numerous than at the others, and there the heat was fatal.

The Board of Trade has received returns of deaths which have taken place during the year 1877, at all of which and 27 places were asked for returns. The Board of Trade receives also returns by the same authority from the *United Kingdom*, consisting of all passengers, and of officers and crew of the steamships, and of all deaths of travellers on railways, or other persons who meet with accidents on land. The age of persons immediately returned to the Board of Trade for England and Wales were 339, a number less by 224 than the numbers returned to the Registrar General, which are undoubtedly the more complete of these two returns. It is probable that the whole number of passengers and others who die of the remote consequences of injuries are not returned to the Board of Trade. It will be noticed that few boys were killed on railways; 7 only were under 7 years of age, 26 were 7-12, 54 were 12-17; the greatest number of males, 103, were of the age of 17-25. Of the 77 females, 6 were under 7 years of age, 7 were 7-12, and 6 were 12-17, 8 were of the age of 17-25, 17 of the age 25-35, 7 of the age 35-45, 12 of the age 45-55, 12 of the age 55-65, 9 of the age 65-75, and 3 of the age 75-85. It is plain from these returns that the travellers killed by railways are chiefly men, most of whom are in the prime of life.

929 males died of injuries in mines; 821 in coal mines and 88 in mines of copper, tin, iron, or other minerals; only 4 women, two of whom committed suicide by throwing themselves down shafts, were killed in mines. It is worthy of remark that while 72 men died by explosion, 2 by burns, and 61 by choke-damp, 399 were killed by the fall of coal, stone, &c., and 73 were crushed. All these deaths occurred to adult men in coal mines.

3,419 males and 1,396 females died of mechanical injuries of various kinds. Of the numbers so returned, 243 males were killed by injuries from horses and other animals; 43 by carriages, 26 by omnibuses, 14 by tram cars, 11 by cabs, 121 by vans or waggons, 26 by drays, 535 by carts, and 71 by other conveyances. Thus it will be found that of males 1073 were killed by horse conveyances, and 243 by horses, making in the aggregate 1,316; of females only 18 died of injuries from horses, 189 from horse conveyances; 1,213 were the total deaths from horses or horse conveyances, which thus exceed the deaths by railways. More persons are perhaps exposed to accidents of that kind than the travellers on railways. If a new means of conveyance has been introduced by the bicycle, a new cause of death has not been introduced: one child and five men died by bicycles.

By chemical injuries 1,147 males and 1,344 females died. Burns and scalds make up the majority of cases; they constitute, exclusive of deaths by explosions and by lightning, 2049 of the deaths. 559 males died of burns, 149 of scalds; 824 females died of burns, and 271 of scalds; one man, 10 boys, and 15 girls died by drinking scalding water. The girls wear combustible dresses of cotton or linen; the boys wear woollen dresses, which are, comparatively speaking, incombustible; this accounts for a difference of 265 deaths in the deaths by burns. Ten men and 2 women died by lightning; 67 males died by sunstroke, 15 females died

of the same cause; 86 deaths of males, 32 deaths of females, were ascribed to gelatio or cold.

311 males and 173 females died of poisoning: 46 males and 12 females by lead; 20 males and 11 females by carbolic acid; 38 males and 25 females by laudanum and syrup of poppies; 25 males and 11 females by alcohol.

There were 2728 deaths of males by drowning, of whom 169 were drowned while bathing, 2 while skating or sliding, 76 by upsetting of boats. One female was drowned while bathing, 8 were drowned by upsetting of boats: in all 666 females were drowned. Thus 3394 persons were drowned whose deaths were registered. This is exclusive of many of the merchant seamen and men and officers in Her Majesty's Navy drowned.

347 deaths were homicides; a great part of them were infanticides, namely 78 boys, and 64 girls; thus leaving 205 deaths by murder and manslaughter. There were only 14 killed by human agency out of 1,000,000 living; or one in 1427 of the deaths were caused wilfully by criminals.

Violent Deaths and Homicides in Italy and in Eleven other Countries.

This presents a considerable contrast with what is observed in Italy. There the homicides amounted in 1876 to 1504*; against 412 recorded in England and Wales during that year. Thus to 1,000,000 of population there were 54 homicides in Italy against 17 in England. If we had the same proportion the homicides would have amounted to 1309 in England and Wales. In Rome the proportion is much higher: it is 141 in Rome, in Sicily 137. The practise of assassination is thus shown to yield these terrible results.

Although the results in England are so much more favourable as regards homicide than in Italy, it is the reverse with other violent deaths: there the violent deaths in 1876 were 6656 against 18,358 (exclusive of executions) in England; or 240 in 1,000,000 of population in Italy against 757 in England.

If we deduct the 1024 suicides and 1504 homicides, there will remain 4128 violent deaths in Italy; from which we deduct also 47 deaths from intemperance, and 6 from hydrophobia and bites of vipers, and one by privation. To render them comparable with the English returns we obtain 4074 which are thus accounted for:—

Deaths by Violence in Italy in 1876.

Drowning	-	-	-	-	-	1324
Suffocation	-	-	-	-	-	137
Explosions	-	-	-	-	-	131

Unknown and various causes	-	-	-	-	-	163
						4074

* The homicides are thus classified according to the returns made to the "Stato Civile": involuntari 285; voluntari 1163; infanticide 56. They are little more than half the number given by the Judicial Statistics. There is no coroner's inquest in Italy.

Upon comparing these with the English returns the difference is evident. There are no mines in Italy; and the physical forces set in motion by coal are much less than in England and Wales. The railway accidents and burns are less fatal there than in this country. Upon looking back to the state of England in the last century we shall find a state of things very like what is prevalent now in Italy, and our progress in the industrial arts has been accompanied by hecatombs of deaths which it becomes necessary to endeavour to avert by special measures. The genius of the country has been directed to the achievement of certain works, and has never asked at what expense of life. The time has come to ask at what cost? and to consider carefully how life may be saved. For though there are fewer homicides in England and Wales than in Italy, it must be recollected that the lives are equally sacrificed by negligence as if they were taken by the red hand of the murderer. The 774 lives lost in the "Princess Alice" were lost to the country as completely as if they had been deliberately sunk in the Thames. Then does it not follow that the thousands of lives lost in England are of little less importance than if they fell under the hand of the assassin? The mine inspectors and the railway inspectors are well employed if they suggest improvements by which life may be saved; and the same analogy would lead us to try how far similar minds may be directing to the suggesting ways of saving life. The medical health officers will be well employed in this direction.

It will be seen in the annexed table that the United Kingdom is at the head of every country except Switzerland in the number of violent deaths. The avalanches and falls down precipices no doubt give Switzerland its fatal pre-eminence.

TABLE showing the POPULATION in 1876, and the NUMBER of DEATHS from VIOLENCE, distinguishing those from SUICIDE, HOMICIDE, and ACCIDENT in each of the under-mentioned COUNTRIES.

COUNTRIES.	Popu- lation, 1876.	Deaths from Violence.	Suicide.	Homi- cide.	Acci- dent and Negli- gence.	Proportion to 1,000,000 living.

Italy - - -	27,700,175	6,656	1,024	1,504	4,128	240	57	54	149

* The above facts given for Norway are for the year 1873, for Scotland 1873, for Finland 1874, and for Prussia 1875.

† The figures for the United Kingdom relate to the population inclusive of the Royal Navy and Merchant Service.

‡ The difference between Scotland and England may be partly accounted for by the returns for England being made by coroners juries and in Scotland by the sheriff substitute; of 430 persons apprehended for murder or manslaughter, and 417 cases of inquest in which the verdict was murder, or manslaughter, or homicide, 247 prisoners were committed for trial in England.

PROXIMITY OF POPULATION.

I am indebted to Dr. Robertson of Edinburgh for the following communication :

" In letters that have reached the Registrar-General of Scotland some doubts have been expressed as to the accuracy of the formula connecting Density with Proximity. Dr. Farr has most kindly communicated to the Statistical Superintendent the following full account of the mathematical reasoning which originally led him to the establishment of the formula, and which may be regarded as a demonstration of its accuracy :—

' DENSITY AND PROXIMITY.

' The density of the population is determined by dividing the population of the country or district by the area. Prony calls this the specific population. It may be described thus :

$$d = \frac{P}{A}, \text{ where } P \text{ represents the population and } A \text{ the area.}$$

' It is assumed that the population is evenly distributed over the area.

' Now, let a be the area to each person ; then $a = \frac{A}{P}$; it is the reciprocal of d , or $a = \frac{1}{d} = \frac{A}{P}$. This a may be called the *areality*.

' Now, upon the same hypothesis of even distribution over the area, what is the *proximity* of person to person ?

' In England the areality (in 1878) is 7267 square yards to each person ; for the population is 24,854,397, and the area is 58,311 square miles, or 180,625,029,640 square yards. So areality, or $a = 7267$ square yards. If areality is 7267 square yards, then proximity is 91.604 linear yards.

' Any other unit might be taken to express the proximity and the areality. But if the areality is expressed in square miles, the proximity must be expressed in linear miles ; if in square yards in linear yards ; if in square metres in linear metres. The yard or the metre is the most convenient unit by which to express the proximity.

' PROXIMITY.

' To explain its derivation from the given *areality*. All the persons of the population may be conceived as in the centre of plots of ground in equal hexagonal forms ; then if the area of the hexagon is known the mean distance from person to person is known. The proximity is a function of the areality.

' Strike a circle with radius r , then inscribe therein a hexagon H_1 with the side r in the usual way ; construct six similar hexagons on the six sides. The line AA' from the centre A of H_1 to the centre A' of H_2 represents the proximity p ; $AA' = AC + CA'$ where $AC = CA'$.

‘ And as $AC = r \cos 30^\circ$, $p = 2r \cos 30^\circ$,
 Now $BC = r \sin 30^\circ$; and $BD = 2r \sin 30^\circ$,
 And $r = \frac{p}{2 \cos 30^\circ} = \frac{p}{2 \times \frac{\sqrt{3}}{2}} = \frac{p}{\sqrt{3}}$. (Equation 1)

‘ The area of the triangle

$$ABD \text{ is } BD \times \frac{AC}{2} = 2r \sin 30^\circ \cdot \frac{\cos 30^\circ}{2} = r^2 \sin 30^\circ \cdot \cos 30^\circ;$$

but there are six similar triangles in the hexagon (H_1), the area of which is therefore—

$$a = 6r^2 \sin 30^\circ \cdot \cos 30^\circ.$$

But $r \sin 30^\circ = \frac{1}{2}r$; and $r \cos 30^\circ = \frac{\sqrt{3}}{2}r$;

$$p = 2r \cos 30^\circ = 2 \cdot \frac{\sqrt{3}}{2}r = \sqrt{3}r \therefore r = \frac{p}{\sqrt{3}}.$$

‘ By substituting for r its equivalent $\frac{p}{\sqrt{3}}$ in equation 1, we have instead of

$$a = 6r^2 \sin 30^\circ \cdot \cos 30^\circ = 6 \cdot \frac{1}{2} \cdot \frac{\sqrt{3}}{2} r^2; a = \frac{6p^2}{3} \cdot \frac{1}{2} \cdot \frac{\sqrt{3}}{2} = \frac{\sqrt{3}}{2} p^2.$$

$$\text{And } p^2 = \frac{2}{\sqrt{3}}a = \frac{2}{3^{\frac{1}{2}}}a;$$

$$\text{taking the square root of both sides, } p = \frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}}a^{\frac{1}{2}} = \left(\frac{4}{3}\right)^{\frac{1}{4}}a^{\frac{1}{2}}.$$

‘ Thus, putting $\frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}} = \left(\frac{4}{3}\right)^{\frac{1}{4}} = c$, which is a *constant*, and is equal to the square root of 2 divided by the fourth root of 3, or to the fourth root of 4 divided by the fourth root of 3, the formula is reduced to the simplest form:— $p = ca^{\frac{1}{2}}$ = proximity when areality (a) is given; and $a = \left(\frac{p}{c}\right)^2$ = areality when p is given.

‘ Thus the proximities vary as the square roots of the arealities; the arealities as the squares of the proximities; precisely as the areas of circles vary as the squares of their radii.

‘ By logarithms—

$$\lambda c = \frac{\lambda 4 - \lambda 3}{4} = .0312347$$

$$\text{and } c = 1.07457$$

$$\lambda p = \frac{\lambda a}{2} + \lambda c$$

$$\lambda a = 2(\lambda p - \lambda c).$$

‘ To determine the proximity of houses on the hypothesis that they are all distributed evenly over the surface of the country, the house areality is deduced by dividing by the number of houses the area expressed in square units.

‘ Let the *house-areality* be expressed by a' , and if there are 5 persons to a house, as

$$a = \frac{A}{P} \text{ and } P = 5H; \text{ then } a' = 5a.$$

' The proximity of the houses (p') is thus determined from the proximity of the population by substituting a' for a in the previous formula.

$$\text{And } p' = a^{\frac{1}{3}}c = (5a)^{\frac{1}{3}}c = 5^{\frac{1}{3}}a^{\frac{1}{3}}c = 5^{\frac{1}{3}}p.$$

' And generally, to obtain the proximity of houses from the proximity of population (p), multiply the latter by the square root of the mean number of persons to a house—say n : $n^{\frac{1}{2}}p = p'$.

' W. FARR.'

" The following independent and original demonstration of the truth of the formula the Statistical Superintendent owes to the kindness of Professor Tait. In regard to this demonstration it is right to explain, that it was communicated before Professor Tait was made aware of the process followed by Dr. Farr in establishing the formula :—

' Taking a hexagonal distribution, let $n + 1$ be the number of points on each side (including both ends), then

$$\text{Whole number of points} = 1 + 6 \frac{n+1}{1 \cdot 2}.$$

' But those at the corners (6) belong each to only two triangles in the hexagon and to four external ones. They count therefore only as $\frac{2}{6} \times 6$. Those on the sides but not at corners ($6(n-1)$) belong to as many outer as inner triangles, and therefore count only as $3(n-1)$. Hence, subtracting $3(n-1)$ and $\frac{4}{6} \times 6$ from the above number, we have

$$\text{Virtual number of points} = 1 + 3n \frac{n+1}{1 \cdot 2} - 3n - 1 - 4 = 3n^{\frac{1}{2}}.$$

' Also, the number of triangles in the hexagon is evidently $6n^{\frac{1}{2}}$.

$$\text{Thus, } \frac{\text{No. of points}}{\text{No. of triangles}} = \frac{3n^{\frac{1}{2}}}{6n^{\frac{1}{2}}} = \frac{1}{2}.$$

' But the area of one triangle, if l be the length of side, is $\frac{l^2}{4} \sqrt{3}$.

$$\text{Thus, } \frac{\text{No. of points}}{\text{Area of hexagon}} = \frac{1}{l^2 \frac{\sqrt{3}}{2}}.$$

This is the reciprocal of the 'mean area to each person,' what Farr calls a .

$$\text{Hence } a = l^2 \frac{\sqrt{3}}{2}, \text{ or } l = \frac{2^{\frac{1}{2}}}{3^{\frac{1}{2}}} a^{\frac{1}{2}}.$$

' Hence it appears that l is what Farr calls p or proximity.

' This method is rigorous even when $n = 1$, so that it applies to any form of area.'

In an additional note Professor Tait writes :—

' Still better, and I don't think to be farther improved.

' Take one equilateral triangle. Its three corners count each for $\frac{1}{3}$ th only, being common to other five triangles.

' Hence $\frac{\text{points}}{\text{triangles}} = \frac{\frac{1}{3} \cdot 3}{1} = \frac{1}{2}$, and the same holds good for any number of such triangles grouped together.' "

DENSITY OR PROXIMITY OF POPULATION: ITS ADVANTAGES AND DISADVANTAGES.

Dr. Chervin, in a periodical of great merit,* points out the fact that Carey, Schaeffle, and Herbert Spencer have not succeeded in applying statistics to their theory of sociology. In our social science we were more fortunate. It is true that in many branches of social science we have to forego the use of analysis; but to others analysis has been successfully applied. I propose to illustrate one of these applications.

The population is distributed over the face of the earth in town and country; and I will consider here some of the advantages and disadvantages of the two kinds of distribution. To do this we must, for mathematical purposes, use terms more precise than town and country: and density—usually of population—has been the term employed. For instance, the density of population in England (1861-70) was 367 persons to a square mile. This implies that England is divided into 58,311 square miles; and that on each square mile there are 367 persons. The density of population on every square mile is different, but taken in the aggregate this is the mean density.

We can conceive the mean population of England in 1861-71 (21,389,245) distributed over 37,319,221 acres, or one person to every 1.74 acres. Thus, imagine the population distributed in the centre of circles—or rather hexagons—of the area of 1.74 acres; then every person must be a certain number of yards from his neighbour: this distance I propose to call the proximity. The proximity of the people of England—their nearness to each other—is now (in 1876) 93 yards.

The advantage of residence in towns—of proximity of people to each other—is evident. Man is a sociable animal; and naturally in his workshop meets his fellow-man. It is, perhaps, impossible to enumerate all the ways in which men derive pleasure or benefits from frequent intercourse with each other; but it is possible to determine the sum of their gratifications by an economical test. What do they give per acre for the ground on which they live in country and town? You will find as from the country you approach the centre of the town the value of the land increases; thus it is 25*l.*, 50*l.*, 100*l.*, 200*l.*, 400*l.*, 800*l.*, 1600*l.* per acre. Now, on what score are these additional sums demanded or given? Is it not that men derive advantages from living near to each other?

There are countervailing disadvantages to which I shall now invite your attention. The first disadvantage strikes every one that comes from the country; and is embodied in Cowper's line—

“ God made the country, and man made the town.”

In the country you are surrounded by fields, by trees—in hill or vale; there the breezes coming from sea, shore, or mountain have free play. The atmosphere is redolent of ozone. In the town, this is wanting. Angus Smith, by chemical tests, proves the air is different. You know that nitrogen and oxygen are everywhere nearly the same in proportion; but carbonic acid varies with the density of population, and there are exhalations—smokes—of various kinds from dead matter, as well as from living bodies. Every town has an atmosphere of its own. Nay, every street has its own peculiar atmosphere. I was going to say that every living being has its own atmosphere.

Now, this atmosphere becomes in certain proportions deleterious, and I will proceed to show that as the population becomes more dense—within certain limits—this deleteriousness is expressed by the mortality. For example, if we arrange the 619 districts of England and Wales in groups according to the rates of mortality, we find that the 18 groups follow this

* *Annales de Démographie Internationale*, No. 5. Article.—Sociologie et Statistique, pp. 75-96.

law; the rate of mortality increases as the density of population increases.* Thus at one end of the scale the deaths per 1000 of population are 15, 16, 17; at the other end of the scale, 31, 33, and 39; the acres to a person in the corresponding districts are 12, 4, and 3; and .01, .05, and .01. The intermediate rates of mortality are 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, and 29; the acres to a person are 4.0, 3.3, 2.9, 2.1, 1.1, 1.0, 0.5, 0.2 and .02.

Now, excluding the London districts, about which there is some difficulty, we have seven groups of districts where the mortality ranges thus: 17, 19, 22, 25, 28, 32, and 39. In the same districts the numbers of persons to a square mile are—166, 186, 379, 1718, 4499, 12,357, and 65,823. Thus in Liverpool, the densest and the unhealthiest district in England, there were 65,823 persons to a square mile; of whom 39 per 1000 died annually. This series of facts may be put in a different way: the nearer, people live to each other the shorter their lives are. Thus, the proximity of people in 53 districts is 147 yards, the mean duration of life is 51 years; in 345 districts the proximity is 139 yards, and the mean duration of life is 45 years; in 137 districts the proximity is 97 yards and the mean duration of life is 40 years; in 47 districts the proximity is 46 yards, and the mean duration of life is 35 years; in 9 districts the proximity is 28 yards, and the mean duration of life is 32 years; in Manchester district the proximity is 17 yards, and the mean duration of life is 29 years; in Liverpool district the proximity is 7 yards, and the mean duration of life is 26 years.†

This is a determined law; and the duration of life being given in one set of conditions, the duration of life in another set of conditions is determined from the proximities.

$$e' = e \left(\frac{p}{p'} \right)^{\frac{2396}{139}}; \quad 35 = 45 \left(\frac{46}{139} \right)^{\frac{24}{139}}$$

applied to the districts where the mean lifetime is 45 and the proximity 139 yards enables us to determine the lifetime where the proximity is 46 yards.

We will now draw some inferences from this law: that proximity and shortness of life go together.

(1.) The question is of the highest importance to England. Every town is surrounded by circles of new houses; and at every census villages are found grown into new towns. Thus, in the last three censuses, the town population was set down at 8,990,809, 10,960,998, and 14,041,404; and to England and Wales 2,000,000 of people have probably been added since the census of 1871, the greater part of whom will be found in the towns.

Now, according to our law, this should imply an increase of mortality; and no doubt such an increase would have been observed, had there not been a countervailing law in operation.

(2.) The mortality was at the annual rate per 1000 in the last three decennials of 22.36 in 1841-50, 22.24 in 1851-60, and 22.51 in 1861-70. In the last seven years, 1871-7, the mortality was at the rate of 21.64, or .87 per 1000 less than in the ten years last quoted. Thus we may hope that there is a reduced mortality in the last seven years; and that thus about 20,000 lives are saved annually.

(3.) While the population has increased, the atmosphere has become purer; and this should encourage us to persevere in our efforts in the same direction.

* The mortality and the density are for the ten years 1861-1870. See Supplement to Registrar-General's 35th Report, p. cli. to clxii.

† It has been found that the mean duration of life of a people (by the English and other Life Tables) is nearly equivalent to the reciprocal of the death-rate minus one-third of the difference between the reciprocal of the death-rate and that of the birth-rate; and the above values were determined in this way. Thus the birth-rate in the group of 53 districts was .03022 and the death-rate .01675; so

$$\frac{1}{.01675} - \frac{1}{3} \left(\frac{1}{.01675} - \frac{1}{.03022} \right) = 59.7 - \frac{1}{3} (59.7 - 33.0) = 51.$$

(4.) The law of proximity would lead us to lay down some standard, and to fix some invariable rule, that beyond a certain density, no further houses should be built on the town areas. Thus, in 23 towns of the United Kingdom, there are 38 persons to an acre; and if such was the standard, where would Liverpool be with its 102 persons to an acre; where would Glasgow be with its 94 persons; Manchester with its 84 persons; Edinburgh and Plymouth with their 53 persons to an acre?

(5.) It is certain that the most effective means of reducing the mortality is to thin the dwellings in the dense parts of the towns; to abolish under Mr. Cross's Act, all the rookeries, and not to rebuild them.

(6.) Simultaneously to put a stop to much of the smoke, and to the sewage gases which are poured into the air the population breathes.

(7.) The law might enact for the future that squares and parks should be left in the area of every town; as these spaces are indispensably required for the health of the population.

(8.) And for the present time the whole of the available land should not be built over, but spaces be appropriated for parks wherever they can be procured. Miss Vernon's paper in the transactions of the Social Science Association will throw much interesting light upon this subject.

(See Diagram on opposite page.)

TABLE A.—PROXIMITY OF POPULATION.

Five hundred and ninety-three districts of England and Wales are arranged in seven groups in the order of mortality. The districts of London are excluded.

	Proximity of the Population (in yards).	Number of living out of which one will die annually.	Mean duration of Life.

Belgium - - - - -	79·84	87·32	181·163
Netherlands - - - - -	99·25	108·54	117·236
France - - - - -	128·76	140·82	69·652
Spain (1870) - - - - -	186·06	203·48	33·357
Italy - - - - -	111·00	121·39	93·714

The Populations used for the above Table are taken from the Registrar-General's 39th Report. With the exception of Hungary and Spain they are for the year 1876 (estimated or enumerated).

The areas were obtained from the Almanach de Gotha.

FORMULA.

$$p = \left(\frac{4}{3}\right)^{\frac{1}{3}} a, \text{ where } p = \text{Proximity, and } a = \text{Area to each Person. } \left(\log. \left(\frac{4}{3}\right)^{\frac{1}{3}} = .0812347\right)$$

Number of living, out of which one
will die annually (long line).
Mean duration of life (short line).

NOTE.—Given the mean duration of life (e) in an area with a stated proximity (p), the mean duration of life (e') in another area with a different proximity (p') can be calculated approximately by the formula $e' = e \left(\frac{p'}{p}\right)^{.24}$.

TABLE C.—FOREIGN TOWNS.

TOWN.	Date at which the Population is taken.	Proximity of the People in metres.	TOWN.	Date at which the Population is taken.	Proximity of the People in metres.
Bombay - -	1872	9·29	Breslau - -	Jan. 1878	11·43

PRESENT PROVISION OF PARKS IN THE GREAT TOWNS.

To show the present provision of parks in the great towns of the country, queries were addressed to the authorities, and replies, of which the following is a digest, have been furnished by Edward Hornsby, Esq., Secretary, Board of Public Works, Dublin; by Joseph Rayner, Esq., Town Clerk, Liverpool; by Dr. Robertson, M.D., F.R.S.E., Edinburgh; by William Price, Esq., Town Clerk, Bristol; by Dr. Russell, M.D., Medical Officer of Health, Glasgow; by J. A. Freeman, Esq., Town Clerk, Brighton; by J. E. Wakefield, Esq., Clerk of the Metropolitan Board of Works, Spring Gardens, London; by W. T. McGowen, Esq., Town Clerk, Bradford; by W. H. Talbot, Esq., Deputy Town Clerk, Manchester; by E. J. Hayes, Esq., Town Clerk, Birmingham; by C. C. Whiteford, Esq., Town Clerk, Plymouth; by G. W. Morrison, Esq., Town Clerk, Leeds; by J. Storey, Esq., Town Clerk, Leicester; by S. G. Johnson, Esq., Town Clerk, Nottingham; by C. Moorhouse, Esq., Town Clerk, Salford; by H. Booth, Esq., Town Clerk, Oldham; by W. Snowball, Esq., Town Clerk, Sunderland; by C. S. Todd, Esq., Town Clerk, Hull; by R. P. Philipson, Esq., Town Clerk, Newcastle-on-Tyne; by J. Yeomans, Esq., Town Clerk, Sheffield; by J. Howard, Esq., Town Clerk, Portsmouth; by H. B. Miller, Esq., Town Clerk, Norwich; and by H. Underhill, Esq., Town Clerk, Wolverhampton.

DUBLIN contains 10,050 acres, and an estimated population in 1879 of 314,666; it has one public park, viz., Phoenix Park, with an area of 1753 acres, the Glasnevin Botanic Gardens covering an area of nearly 40 acres, and a lawn of 3 acres belonging to Leinster House, to which the public are admitted. The annual cost of maintenance of the park, which is situated to the west, and in the immediate vicinity of the city, is 6768*l.*, that of the Botanic Gardens, *excluding* the pay of officials and workmen, which is defrayed by the Science and Art Department, is 986*l.* In addition to the park and gardens, there is an open space of about 40 acres, known as St. Stephen's Green, which is now being ornamented at the expense of Sir A. Guinness, Bart., M.P., and will, when completed, be opened as a public park. It will be vested in the Commissioners of Public Works and maintained as a public park from 1st July 1879, at an annual estimated cost of 1,400*l.*

EDINBURGH contains an area of 4191 acres, and an estimated population in 1879 of 226,075; it has one royal park, viz., Queen's Park, containing 407 acres, and about 145 acres of park and meadow ground which belong to the city. Music is occasionally performed by military bands. The parks are frequented by all classes of the population. Queen's Park is situated about half a mile to the east of the centre of the city; the other park is about a quarter of a mile to the south, and the meadow ground is nearly a mile to the north-west of the centre of the city.

BRISTOL, containing an area of 4452 acres, and an estimated population in 1879 of 209,947, has two downs or commons covering an area of 442 acres. They are thickly planted with thorn and other bushes and contain many fine timber trees, but nothing of an ornamental style, the prevailing idea being to preserve the down or common character, and avoid that of a garden. Clifton Down was settled without any payment, subject to certain commonable rights; and the Corporation purchased Durdham Down, subject to such rights for 15,000*l.* The cost of maintaining these two downs is between 500*l.* and 600*l.* a year. The property in the neighbourhood is said, undoubtedly, to have increased in value, both on account of the many advantages the downs afford, and the certainty that they will always remain open and unenclosed. In the summer months music is constantly per-

formed by itinerant bands, and others partly supported by the inhabitants. The downs are frequented by all classes of the population, and form one of the chief attractions to Clifton as a health resort. They lie in a north-westerly direction and within two miles from the centre of the city.

LIVERPOOL, containing an area of 5210 acres, and an estimated population in 1879 of 538,338, has four parks covering an area of 525 acres. They are planted and ornamented. The original cost of two of the parks including the building land was 573,382*l.*, but the cost of the other two cannot be obtained, as they were formed out of the Corporate Estate, and not purchased separately for this specific purpose. The annual cost of maintenance of the four parks is about 80,50*l.* Music is generally performed by the band of the Liverpool police force, and by the bands of various volunteer corps. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. The parks are situated south-east, north-east, and east, at an average distance of about one mile and a quarter from the centre of the town.

GLASGOW contains 6033 acres, and an estimated population in 1879 of 578,156; it has four parks covering an area of 447 acres, about one-fourth of which is planted with trees, shrubs, and flowers. The parks were purchased by the Town Council of Glasgow as trustees under "The Glasgow Public Parks Act, 1859," and "The Glasgow Improvement Act, 1866," at a cost, including expense of formation, of 310,000*l.* The annual cost of maintenance of the parks, (together with 9000*l.* interest,) amounts to 19,250*l.* The property in the neighbourhood is said to have increased considerably in value since their formation. Music is performed at the cost of the Corporation, by military bands three nights in the week during the summer in each of the parks, which are frequented by all classes of the population, especially the working classes. It is believed that the parks have contributed to the health of the neighbourhood. They are situated between one and two miles from the centre of the town, in easterly, westerly, and southerly directions.

BRIGHTON, containing an area of 2354 acres, and an estimated population in 1879 of 105,608, has no parks, but two recreation grounds, viz., the Level, and the Race Ground, covering an area of about 106 acres, the outer pathways of which are planted with trees and shrubs. They were dedicated to the public use by the Lords of the Manor and their tenants on a division of certain lands in the borough known as the tenantry lands. The cost of maintenance of the Level, which contains a little over 10 acres, is about 100*l.* a year. The Race Ground is vested in trustees, and no cutlay is made upon it. The grounds are chiefly frequented by the working classes and their children, and, it is believed, have contributed to the health of the neighbourhood. The Level is situated in the centre of the town, and the Race Ground at the north-east corner.

LONDON, having an area of 75,362 acres, and an estimated population in 1879 of 3,620,868 is provided with nine royal parks, containing 1790 acres, all of which are planted and ornamented. The cost of maintaining the parks is stated to be about 74,553*l.* annually. It has also two people's parks and several commons and open spaces, covering an area of about 1459 acres, under the management of the Board of Works, who are negotiating for the acquirement of other open spaces near the metropolis. Excluding Plumstead and Welling Commons, the Board of Works have expended about 346,033*l.* in the purchase, formation, and improvement of the two people's parks, commons, and open spaces, which cost annually about 7390*l.* for maintenance. The Board also paid 20,450*l.* for a part of Victoria Park, which the Government were about to devote to building purposes. The parks, in nearly all of which music is performed frequently during the summer months, are frequented by all classes of

the population, and without doubt exercise a very beneficial influence over the people in many ways. They are situated in all directions around the metropolis.

"It may perhaps be assumed that London, with her royal as well as her people's parks, is better provided with open spaces than provincial towns. The Thames is certainly a great air artery and a source of never-ending enjoyment to the Londoner; but for recreation ground we have but an acre for 1114 persons (less than several provincial towns), and there are very few neighbourhoods where there is any land that it is possible to convert into another park. In Paddington, however, there is still time to save nearly 100 acres from the builder. The land is adjacent to Kilburn and Maida Vale, and is surrounded on all sides by an ever-increasing population which is practically out of reach of any park or recreation ground.

"At this moment a petition, signed by 18,000 persons, is about to be presented to the Board of Works from Paddington and the adjoining parishes, praying the Board to secure this land, the remainder unbuilt over of the so-called Paddington Estate. The ground is now surrounded, within a radius of a mile, by nearly 100,000 people; whole districts in Kilburn and Queen's Park Estate being inhabited exclusively by the artisan class, far removed from amusements of all sorts, indoor or outdoor. It would be particularly appropriate that the Paddington Estate should be restored to public uses, forming as it does part of the lands left long ago to the parishioners of Paddington."*

LEICESTER, containing an area of about 3200 acres, and an estimated population in 1879 of 125,622, has about 65 acres of park land for the recreation of the people; it consists of good open grass land, but is not planted or ornamented. The original cost is not known, and the annual outlay for maintenance is more than covered by the adjustment of sheep. The property in the neighbourhood of the park is said to have increased in value. Music is performed one evening in a week during the summer by a private subscription band. The park is frequented by all classes of the population, and, it is believed, has contributed to the health of the neighbourhood. It is situated about a mile in a south-easterly direction from the centre of the town.

Leicester also has two public recreation grounds, one on the southern side of the town containing 9 acres, and the other on the eastern side, containing about 26 acres, each about three quarters of a mile from the centre of the town. The Corporation have recently purchased about 60 acres of land on the north-western side of the town (three-quarters of a mile from its centre), and intend planting and ornamenting it at a total cost, including purchase, of 30,000*l.*

BRADFORD, containing about 7220 acres, and an estimated population in 1879 of 191,046, has four parks, one of which is not quite complete, covering an area of 215 acres. They are all planted and ornamented in a most liberal manner. The original cost is stated to be about 169,804*l.* One park valued at 40,000*l.*, was established by a public committee, and handed over to the Corporation free of cost, the other three being purchased by the Corporation. Thirty acres of land have also been acquired for the formation of a fifth park, which when complete will cost the Corporation about 20,000*l.* The annual cost of maintenance at present is about 2000*l.*, but will be increased as Bowling and Bradford Moor Parks are completed. The property in the neighbourhood of the parks has increased very considerably in value; land which was formerly used for pasture has been extensively taken up for building sites, and instead of being sold by the *acre* it is now sold by the *yard*. Music is performed in the parks on appointed afternoons throughout the summer months, by bands

* See Miss M. J. Vernon's paper on "Public Parks and Gardens," read at the Social Science Congress, Cheltenham, Oct. 1878.

supported by subscribers, and sums voluntarily contributed. The parks are frequented by all classes of the population (especially by the industrial classes), and, it is believed, have contributed much to the health of the neighbourhood, and exercise beneficial influences on the visitors. The parks are situated on all sides of the town, in the most open and healthful spots that could be selected, such as are already, or are fast becoming, centres of population, in order that they may be available without requiring the inhabitants to walk far to get to them.

MANCHESTER, containing 4293 acres, and an estimated population in 1879 of 361,819, has three parks, covering an area of about 121 acres, all of which are planted and ornamented. Two of the parks were purchased by public subscription, and cost about 14,963*l.*; the other was purchased and formed by the Corporation, at a cost of about 79,000*l.* In addition to the three parks there is an open space of about 5 acres known as Ardwick Green, which was presented to the city by the owners. The annual cost of maintenance is about 6000*l.* for the whole. The property in the neighbourhood of the parks has increased in value, particularly that adjoining the Alexandra Park, where, since its formation, many residences have been built. Music is performed by the police band, the expense of which is defrayed by private subscription. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. They are situated north-west, north-east, east, and south of the city, and between one and two miles from its centre.

BIRMINGHAM, containing an area of 8400 acres, and an estimated population in 1879 of 388,884, has seven public parks and two public recreation grounds. The area of the parks is about 211 acres, and that of the recreation grounds about 13 acres. They are all laid out and planted, and two of them have ornamental sheets of water. Four of the parks and one recreation ground were presented to the Corporation. The remainder cost the Corporation, in the purchase, planting, &c., about 58,000*l.* The cost of maintenance in the year 1877, exclusive of interest on loans and sinking funds, was 4227*l.* In the summer months music is performed in two of the parks by the police band. The parks are frequented by all classes of the population, and very largely by the working classes; and, it is believed, have contributed to the health of the neighbourhood; they are situated on all sides of the town and between one and two miles from the centre.

LEEDS contains an area of 21,572 acres, and an estimated population in 1879 of 311,860; it has one park and five recreation grounds. The recreation grounds cover an area of 108 acres. The Corporation expended a sum of about 151,487*l.* in the purchase of the park estate which contains 774 acres, and it is intended to retain 350 acres, which are planted and ornamented, for park purposes and to sell the remainder. The cost of four of the recreation grounds was about 13,367*l.*, the other being held by the Corporation at a rental of 140*l.* The annual cost of maintaining the park is about 3507*l.* and of the recreation grounds 111*l.* The park is situated about two miles and three quarters in a north-easterly direction from the centre of the town.

PLYMOUTH, containing an area of 1395 acres, and an estimated population in 1879 of 74,293, has parks or open spaces known as the Plymouth Hoe, the Governor's Meadow, and part of the Glacis of the Citadel; they contain altogether an area of about 22 acres; the Governor's Meadow only is planted with a border. The Hoe has been the property of the Corporation time out of mind; but the other two spaces are rented from the War Department for 30 years at 52*l.* per annum. The annual cost of maintenance is between 350*l.* and 400*l.* In the summer months music is performed by the bands of the Royal Marine corps and by those of the regiments stationed in Plymouth and Devonport. The parks are frequented by all classes of the population, and, it is believed, have contributed to the

health of the neighbourhood. They are situated about half a mile in a southerly direction from the centre of the town.

NOTTINGHAM, containing 9960 acres, and an estimated population in 1879 of 169,396, has 150 acres of parks and recreation grounds, about 40 acres of which are planted and laid out in an ornamental manner; the remainder consists of cricket and recreation grounds and public walks. Of the 150 acres about 120 were allotted to the Corporation by the Commissioners under the Nottingham Inclosure Act of 1845 for recreation purposes; the remainder is the private property of the Corporation. The property in the neighbourhood of the parks is considered to have increased in value. Music is occasionally performed in the evenings by the Nottingham police and other local bands. The parks and grounds, costing annually 2570*l.* for maintenance, are frequented by all classes of the population, but chiefly by the working classes, and, it is believed, have contributed to the health of the neighbourhood. They are situated in nearly all directions, and within a mile, from the centre of the town.

SALFORD, containing an area of 5170 acres, and an estimated population in 1879 of 177,849, has three parks covering an area of 70 acres, all of which are planted and ornamented with flower beds, mounds, and shrubberies. There is also, at the present time, another park, of about 17 acres, in course of construction. The amount expended by the Corporation in the purchase and formation of parks is 21,725*l.* One of them was, however, almost entirely acquired by public subscription and handed over to the Corporation for management. They cost about 4673*l.* per annum for maintenance. Music is performed in each of the parks during the summer months by the police band; and property in their neighbourhood is said to have increased in value. They are chiefly frequented by the working classes, and, it is believed, have contributed to the health of the neighbourhood. The sites have been so selected that each park is within easy reach of the most populous parts of the borough.

OLDHAM, containing 4666 acres, and an estimated population in 1879 of 111,318, has one park covering an area of 60 acres, which is planted and ornamented. It was purchased and planted by the Corporation at a cost of about 33,000*l.*, and the sum of about 1250*l.* is expended annually in its maintenance. The property in the neighbourhood of the park is said to have increased considerably in value. Music is occasionally performed by volunteer and other bands. The park is frequented by all classes of the population, and particularly by the working classes, and it is believed to have contributed much to the health of the neighbourhood. It is situated about a quarter of a mile in a southerly direction from the centre of the town. It is intended to secure 16 acres of land in another part of Oldham as recreation ground.

SUNDERLAND, containing an area of 2768 acres and an estimated population in 1879 of 114,575, has about 24 acres of park ground, planted and laid out with intersecting walks and an ornamental sheet of water. It was purchased and formed by the Corporation at a cost of 15,500*l.*, and about 700*l.*, exclusive of interest, &c., is expended annually in maintaining it. The property in its neighbourhood is said to have increased very considerably in value. Music is performed occasionally during the summer months by the police and other local bands. All classes of the inhabitants frequent the park, which is believed to have contributed to the health of the neighbourhood. It is situated as nearly as may be in the centre of the town.

HULL containing an area of 5635 acres, and an estimated population in 1879 of 146,347, has one park and two recreation grounds. The park contains 26 acres and the two recreation grounds nearly 5 acres. Only the park is planted and ornamented. The land for the park was presented, and the recreation grounds are leased to the Corporation. The park costs annually for maintenance about 450*l.*, and the recreation grounds 160*l.*; the property in the neighbourhood of the former is said to have increased

immensely in value. Music is performed by the police and other bands on stated days and hours. The park is frequented by all classes, and it is believed to have contributed to the health of the neighbourhood. It is situated about one mile from the centre of the town in a north-westerly direction.

NEWCASTLE-ON-TYNE contains 5371 acres, and an estimated population in 1879 of 146,948; it has one park covering an area of 35 acres planted and ornamented. It was obtained free of cost, the only expense being the formation. The annual cost of maintenance is about 650*l.* Music is performed weekly in the summer months by the police band, and the park is frequented by all classes of the population. The distance of the park from the centre of the town is about three quarters of a mile in a northerly direction. Owing to the success and the satisfaction given to the public by the park, the Corporation have purchased about 31 acres, and have been presented with 26 acres of land by Sir W. G. Armstrong, for the formation of two other parks, which it is thought will be opened in the spring of 1879. This additional outlay on the part of the Corporation will cost about 26,560*l.* in purchase money. One of these new parks is situated in the western and the other in the eastern part of the town.

SHEFFIELD containing an area of 19,651 acres, and an estimated population in 1879 of 297,138, has two parks covering an area of 49 acres, both of which are planted to a greater or a less extent. The original cost of Weston Park, containing 13 acres, was 17,500*l.*; it was purchased by the Corporation. The other park, containing 36 acres, was presented to the Corporation by Mr. Alderman Mark Firth, J.P. The annual cost of maintaining the two parks is about 1300*l.* Music is occasionally performed during the summer months by the volunteer and police bands. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. Weston Park is situated about one mile in a westerly direction and Firth Park about two miles and a half in a northerly direction from the centre of the town.

In addition to the two parks, there is one belonging to the Duke of Norfolk containing about 30 acres, to which the public are admitted. It is situated about one mile from the centre of the town in an easterly direction.

PORTSMOUTH, containing an area of 4486 acres, and an estimated population in 1879 of 131,821, has one park, opened in June last, the area of which is about 14 acres. It is planted, and adjoining is an additional space of about 2 acres, set apart exclusively for children, with swings and other amusements. The land is held for 50 years, under a lease from the War Department, at an annual rent of 50*l.* The cost of formation, lodges, &c. was 3500*l.* No arrangement as to the performance of music has yet been made, but the "Union" band plays in the afternoon and evening in the summer months. The park is chiefly frequented by the poorer classes, and is situated in the centre of the town.

Another piece of land of 17 acres, near the sea, has been acquired for a park which is now in course of formation.

NORWICH, containing an area of 7472 acres, and an estimated population in 1879 of 85,222, has no park, but there is a space of about 7 acres known as Chapel Field, which is surrounded with fine elm trees. The field has been in the possession of the Corporation for 600 years at least, and costs about 60*l.* or 70*l.* per annum for maintenance. It is chiefly frequented by the working classes and their children, and it is believed to have contributed to the health of the neighbourhood. It is situated about half a mile in a southerly direction from the centre of the city.

WOLVERHAMPTON, containing an area of 3396 acres, and an estimated population in 1879 of 75,100, has at the present time no public park for the recreation of the people. The town council have, however, just accepted a lease of 50 acres of land which they are about forming into a public park. It will be situated almost in the centre of the borough, and will probably be opened in about a year.

COMPARATIVE ANALYSIS OF PARK PROVISION IN THE TOWNS.

An attempt is made in the following table to show how the principal towns of England are relatively provided with parks. Thus, in the 22 towns there is one acre of park area to 25 acres of town area; and there are 965 inhabitants to one acre of park area. In Dublin there are six acres of town area to one acre of park area; and there are 175 inhabitants to one acre of park area; in London there are 23 acres of town area to one acre of park area, and there are 1114 inhabitants to one acre of park area; there are 47 acres of town area to one acre of park area in Leeds, and 681 inhabitants to one acre of park area.

ACRES OF TOWN AREA TO ONE OF PARK; PERSONS TO ONE ACRE OF PARK, and to ONE ACRE OF TOWN AREA; and the NUMBER and PROPORTION of OUTSIDE HOUSES.

NAME OF TOWN.	Acres of Town Area to One Acre of Park.	Persons		Outside Houses.	
		To One Acre of Park.	To One Acre of Town.	Number.	Proportional Number to Total Houses.
		$\frac{I}{P}$	$\frac{I}{A}$	$4(H-1)$	$\frac{4(H-1)}{H^2}$

Portsmouth	280	8239	29	549	·02874
Norwich	1067	12175	11	537	·02933
Wolverhampton (no Parks)	—	—	22	456	·03448

A = Town area; P = Park area; I = Inhabitants; H^2 = Total Houses; H = Houses on side of a square; $\frac{A}{P}$ = Town area to Park area; $\frac{I}{P}$ = Inhabitants to Park area; $4(H-1)$ = Outside Houses; $\frac{4(H-1)}{H^2}$ = proportional number of Outside Houses to the total.

NOTE.—The Table may be read thus : In London there are 23 acres of town area to one acre of park, 1114 persons to one acre of park, 48 persons to one acre of town; the number of outside houses is 2581, and the proportional number to total houses ·00618. In Plymouth there are 63 acres of town area to one acre of park, 3377 persons to one acre of park, 53 persons to one acre of town; the number of outside houses is 338, and the proportional number to total houses ·04631.

It must be evident that there is another element that has to be taken into account; that is the size of the town compared with its circumference. For a town is supplied with air from without as well as from within; and generally the number of houses in the circumference of a town is greater in proportion in the small than in the large towns. Thus, suppose the houses to be symmetrically arranged in a square round the centre of a town, then a single house is surrounded on every side with air. If the square has five houses to a side then the houses will be 25, and the outside houses will be 16;

1	2	3	4	5
16				6
15				7
14				8
13	12	11	10	9

with six houses to a side there will be 36 houses and 20 outside houses; with 100 houses to the side there will be 10,000 and 396 outside houses. The degrees of the supplies of outside air will be expressed by the fractions

$\frac{1}{3}, \frac{3}{8}, \frac{396}{10,000}$. The general formula will be $\frac{4(H-1)}{H^2} = h$.

Then a correction will be required in comparing towns of different sizes. Thus the population of Birmingham is 388,884 and the population of London is 3,620,868. The houses in Birmingham are 68,532, the houses in London are 417,767. Supposing the houses to be arranged symmetrically in squares in both towns the outside houses will be 1043 in Birmingham and 2581 in London. The proportion of air supplied from outside to Birmingham will be to that supplied from outside houses in

London, as $\frac{1043}{68532}$ to $\frac{2581}{417767}$ or as .01522 to .00618.

The houses are not arranged symmetrically in squares, but the numbers given are *minima*, for any irregularity in contour would increase the number of outside houses to the total number of houses.

I have the honour to be,

Sir,

Your very obedient servant,

WILLIAM FARR.

To

The Registrar General.

**APPENDIX TABLES,
1877.**

NOTE.—For the causes of death in the 5 years 1850–54, and the 5 years 1847–51, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1845–46.

* Deaths from violence were not classified according to orders prior to 1858. All deaths from violence are classified to Order I. (Accident or Negligence), unless they are specially ascribed to homicide, suicide, or execution. Order 2, comprising violent deaths in battle, is inapplicable to the civil population.

† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in the Criminal Returns, inasmuch as the executions therein recorded in each year are classed according to the date of conviction, while the numbers in this Table are placed under the years in which the deaths are registered.

in each of the 28 Years 1850-1877.

	Sudden Deaths (Cause unascertained) - -	3,500	3,458	3,591	4,018	3,903	4,129	3,474	3,403	3,006	2,821	2,894	2,697	2,778
	Causes ill-defined or not specified - - -	9,776	9,070	9,187	9,227	8,267	8,205	7,394	6,793	5,638	5,434	5,767	5,037	4,783

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to estab-
lish like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions of
the same numbers bore to the sum of the two in subsequent years, when they were separately classified.
† Note referring to classification of deaths from violence on page 218.

Causes of Death in 1877.

					16 Spleen Disease, &c. -	184	255				

* See note referring to the classification of deaths from violence on page 248.

NOTE.—The causes of 1,846 deaths were ill-defined or not specified; the figures in this Table represent therefore the proportion of deaths from each cause to a million deaths from specified causes.

TABLE 4.*—Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 25 Years 1850-74, and in each Quinquenniad of that Period; also the Rate of Mortality in the Years 1875, 1876, and 1877.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1838 these have been distributed ratably over all the specified causes in the Table. See note referring to the classification of deaths from violence on page 346.
Average in 10 years.

TABLE 4.* (continued.) Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 25 Years 1850-74, and in each Quinquennial of that Period; also the Rate of Mortality in the Years 1875, 1876, and 1877.

* The populations of these counties have been estimated to the middle of 1877 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1877. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

CLASS B. STERELMINTHA.										
Tænia (Tape Worm) - - - - - 6 - 6										
Hydatids - - - - - 51 27 24										

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as *Leamington, Torquay, &c.*, which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 289) and "Index of certain Towns" (page 299).

A

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.

INDEX OF SUB-DISTRICTS.

alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having compound names in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P.,
President of the Local Government Board, &c. &c.

*General Register Office, Somerset House,
31st March 1880.*

(1878.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the marriages, births, and deaths that were registered in England and Wales during the year 1878.

The country had not recovered from the general depression which began at the close of 1873, and the fall in the marriage-rate in recent years consequently continued; the proportion of marriages of minors has declined since 1875. Comparing the proportion of men and women who now sign the marriage register with marks with the proportion thirty-three years ago, a decrease equal to 50 per cent. is observed. I am therefore able to report that only 15 men and 20 women out of every 100 couples marrying signed with marks in 1878. These proportions will no doubt be much reduced when the scholars receiving instruction under the provisions of the Elementary Education Acts of 1870 and 1876 attain a marriageable age. The number of marriages of divorced persons in 1878 was 107, or 25 more than in the previous year.

The birth-rate was about the average. I have shown that to 1000 married women living at the child-bearing ages there were 302 legitimate births annually in the three years 1875-7; in France the proportion was 196. It is satisfactory to find that to every 100 children born in England less than five were illegitimate: twenty years ago the proportion was 7 per cent.

The death-rate, notwithstanding the high temperature experienced in the summer, and consequent increase in the deaths from certain zymotic diseases, did not exceed the average. Mortality generally increases with density of population; it is gratifying therefore to observe, notwithstanding the increase of population, a reduction in the death-rate of town districts during recent years: the mortality was at the annual rate per 1000 of 24.7 and 24.8 in the two decennials 1851-60 and 1861-70, whereas in the last eight years 1871-8 the mortality was at the annual rate of 23.6, or 1.2 per 1000 below that in the previous ten years. This implies a saving during the eight years of 16,000 lives annually in the urban registration districts; a reduction is also apparent in the rural registration districts.

I have discussed the subject of town death-rates at some length, and suggested how the mortality statistics of urban and rural *sanitary* districts might be published in a collective form. Such results for purposes

of general investigation and comparison would be of greater practical utility than those published, once in every ten years, for such large areas as superintendent registrars' districts.

The death-rates of children in the various towns afford an interesting subject of observation and inquiry for Medical Officers of Health and other sanitary reformers.

More complete records of immigration are now kept for the United Kingdom, so that it is possible to determine the balance of population more accurately than heretofore.

The abstracts relating to public institutions show that there has been little or no increase in the number of public lunatic asylums in recent years: the proportion of lunatics in all asylums to 1000 of population has, however, gradually increased from 2.03 annually in the five years 1859-63, to 2.72 in the five years 1874-8. This is no doubt partly due to wider recognition of the advantages of asylums.

The alphabetical indexes of marriages, births, and deaths for public use now comprehend more than 59,000,000 names, extending over a period of 41½ years. 27,776 searches were made in 1878, for which and for certificates, fees to the amount of 4,313*l.* 8*s.* 6*d.* were received.

I have given the usual summary of vital statistics for the United Kingdom; the marriage rate of Scotland is lower than that of England, but the Registrar-General of Scotland reports that although the laws which regulate the registration of marriages are not the same there as in England, still a marriage hardly ever escapes registration, and therefore the difference between the respective marriage rates is not owing to defective registration as is the case in Ireland.

The mortality of the Army in 1878 both at home and abroad was below the average of the previous seventeen years.

The death-rate in the Royal Navy from disease was 5.3 per 1000 force; slightly above that in 1877, when the health of the Navy was very satisfactory.

The death-rate of the Mercantile Marine from all causes is double that of the Royal Navy; this is chiefly attributable to the excessive mortality in the former from drowning by shipwreck and otherwise.

The commercial depression of 1878 was felt more or less throughout Europe, and was expressed in a low marriage-rate in each of the European states. Compared with the average rates of the previous five years, it was most depressed in the German Empire; and in Austria, Denmark, Switzerland, and Italy it was more depressed than in England.

I have exhibited some results indicating the relation between the birth-rate and the distribution of the land in France.

The meteorological phenomena of the year 1878 were, in some respects, unfavourable to the public health; the excess in the temperature of the summer months and the severe cold towards the end of the year raised the mortality of those seasons.

The foregoing is a brief summary of some of the subjects discussed more fully in detail in the subsequent pages.

Emigration and Immigration.—Mr. Giffen's report to the Board of Trade relating to the *United Kingdom* shows that although the number of emigrants in 1878 was slightly in excess of that in each of the two preceding years, it was small compared with the number in former years.

The emigrants in 1878, including 32,390 foreigners (after adding a certain proportion of 3064 whose birthplaces were not distinguished) numbered 147,663 against 119,971 in 1877, showing an increase of 27,692. See Table I. For the occupations of emigrants see preliminary table, pp. cvi-cvii.

TABLE I.—EMIGRANTS OF VARIOUS NATIONALITIES, 1863-1878.

YEARS.	Of British Origin.				Foreigners.	Not distinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	58,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	23,619	6,291	209,801
1866	58,856	12,307	98,890	170,053	23,691	8,138	204,882
1867	55,494	12,966	88,622	156,982	31,193	7,778	195,953
1868	58,268	14,954	64,965	138,187	51,956	6,182	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	106,293	22,935	74,233	202,511	46,396	6,033	256,940
1871	102,452	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,343	21,310	83,692	228,345	72,198	10,069	310,612
1874	116,400	20,286	60,406	197,072	38,465	5,277	241,014
1875	84,540	14,086	41,449	140,075	31,347	1,797	173,809
1876	73,396	10,097	25,976	109,469	25,584	3,169	138,222
1877	63,711	8,653	22,831	95,195	21,289	3,487	119,971
1878	72,323	11,087	29,492	112,902	31,697	3,064	147,663

The number of emigrants of *British* origin was 115,273, against 97,967 in the previous year, showing an increase of 17,306 about one half of whom were emigrants to the United States.

Of the 115,273 emigrants of *British* origin, 74,089 or 64 per cent. were English, 11,298, or 10 per cent. were Scottish, and 29,886, or 26 per cent. were Irish. In the number of emigrants of *Irish* origin there was an increase of 6604, or 28 per cent.

The number of British emigrants to the several destinations were in nearly the same relative proportions as in 1877. See Table II.

TABLE II.—AVERAGE ANNUAL NUMBER OF EMIGRANTS OF BRITISH ORIGIN to each of the under-mentioned PLACES.

PERIOD.	TO UNITED STATES.		TO BRITISH NORTH AMERICA.		TO AUSTRALASIA.		TO ALL OTHER PLACES.		TOTAL.
	Average Annual Number.	Percentage of Total.	Average Annual Number.	Percentage of Total.	Average Annual Number.	Percentage of Total.	Average Annual Number.	Percentage of Total.	
Three years 1853-55	143,606	62	27,856	12	59,876	26	396	—	231,733
Five years 1856-60	74,958	61	7,968	6	37,136	30	3,437	3	123,497
" 1861-65	93,208	65	9,548	7	37,268	26	3,535	2	143,559
" 1866-70	133,317	78	16,514	10	16,204	9	4,772	3	170,807
" 1871-75	134,853	70	22,283	11	27,882	14	8,889	5	193,907
Year 1876	54,564	50	9,335	9	32,196	29	13,384	12	109,469
" 1877	45,481	48	7,720	8	30,138	32	11,856	12	95,195
" 1878	54,694	49	10,652	9	36,479	32	11,077	10	112,902

Note.—No correction has been made in the above table for those whose nationality was not distinguished.

Of the 112,902 emigrants of British origin (uncorrected for those whose nationality was not distinguished) 17,449 were under 13 years of

age and 95,453 were aged 13 years and upwards; of this latter number 58,852 were males—of whom 14,868 were married and 43,984 were unmarried—and 36,601 were females, of whom 15,412 were married, and 21,189 were unmarried.

The total number of immigrants in 1878 was 77,951, being 3,897, or 4·8 per cent. below the number in 1877.

TABLE III.—NUMBER of IMMIGRANTS, 1876-1878.

YEARS.	Of British Origin.	Foreigners.	Not distinguished.	TOTAL.
1876 - -	71,404	22,153		93,557
1877 - -	63,890	17,755	203	81,848
1878 - -	54,944	23,007	—	77,951

As regards immigrants of British origin only, the number was 54,944, against 63,890 in the previous year, being a decrease of 8946 or 14 per cent.

TABLE IV.—NUMBER of BRITISH IMMIGRANTS from each of the under-mentioned PLACES.

YEARS.	FROM UNITED STATES.		FROM BRITISH NORTH AMERICA.		FROM AUSTRALASIA.		FROM OTHER PLACES.		TOTAL.
	Number.	Proportion per cent. of Total.	Number.	Proportion per cent. of Total.	Number.	Proportion per cent. of Total.	Number.	Proportion per cent. of Total.	
1876 -	54,997	76	6,629	9	2,579	4	7,499	11	71,404
1877 -	44,878	70	5,687	9	4,637	7	8,688	14	63,890
1878 -	34,946	63	6,204	11	4,207	8	10,493	19	54,944

The excess of emigrants over immigrants of British origin in 1878 was 57,958, against 31,305 in 1877, and 38,065 in 1876.

TABLE V.—EXCESS of EMIGRANTS over IMMIGRANTS of BRITISH ORIGIN, 1876-78.

DESTINATION OR COUNTRY OF DEPARTURE.	Emigrants of British Origin.			Immigrants of British Origin.			Excess or defect of Emigrants.		
	1876.	1877.	1878.	1876.	1877.	1878.	1876.	1877.	1878.
United States - -	54,354	45,481	54,694	54,697	44,878	34,040	-143	603	20,654
British North America	9,335	7,729	10,652	6,629	5,687	6,204	2,706	2,033	4,448
Australasia - -	32,196	30,138	36,479	2,579	4,637	4,207	29,617	25,501	32,272
All other places - -	13,384	11,856	11,077	7,499	8,688	10,493	5,885	3,168	584
TOTAL - -	109,469	95,195	112,902	71,404	63,890	54,944	38,065	31,305	57,958

Note.—The numbers in this Table are uncorrected for those whose nationality was not distinguished.

The number of emigrants to the United States in the years 1876-7 was nearly the same as the number of immigrants therefrom; in the year 1878

the numbers were, emigrants 54,694, immigrants 34,040, the excess of emigrants being 20,654. To British North America the numbers were, emigrants 10,652, immigrants 6204, and the excess of emigrants was 4448. To Australasia the emigrants were 36,479, while the immigrants therefrom were only 4207, showing an excess of 32,272 emigrants.

The above numbers relate to passengers to and from places out of Europe.

Increase of Population.—The numbers of births and deaths registered in the year 1878 were 891,906 and 539,872 respectively; so the natural increase of population was 352,034. The balance of emigrants (deducting immigrants from emigrants of British origin) was 57,958, about 73 per cent., of whom (42,309) were probably of English descent, so the net gain to the population in 1878 was (352,034—42,309) 309,725. The population of England and Wales estimated from the actual rate of increase during the thirty years 1841–71 was 24,700,853 at the end of 1877 and 25,009,867 at the end of 1878; the estimated increase in the twelve months was 309,014, which is almost identical with the number deduced as above.

Meteorology.—The mean reading of the barometer for the year, 29.751 inches, was lower by 0.023 inch than the average of 37 years. In the first quarter of the year the readings, on the whole, were high; during the last three quarters they were below the average. The highest reading at 160 feet above the level of the sea was 30.507 inches on 12th January, and the lowest was 28.857 inches on 26th October, so the range in the year was 1.650 inch.

The mean temperature of the air during the year 1878 at Greenwich was 49°·6, which is 1°·0 above the average of 107 years. The first three months of the year were, with the exception of a cold period from 25th January to 12th February when snow fell generally, and about 12 days in March—exceedingly mild. March terminated and April set in with severe frosts, lasting to 11th April, and then up to the middle of May followed a warm period with the temperature every day in excess of the average; during the remainder of May and until 19th June the temperature was constantly low. There was a week of hot weather at the end of June, the thermometer showing in some places 90° or higher, and again in the middle of July. Three weeks ending 11th September and the first three weeks of October were generally warm and fine, after which a period of cold weather set in, which lasted through November. In December severe wintery weather was experienced, and the mean temperature of the last three months of the year was 2°·0 below the average of 107 years. The average deficiency of temperature for the 65 days ending 25th December was 5°·6; on the 24th December the deficiency was as large as 17½°.

There was a downfall of rain equal to 29.2 inches in 166 out of 365 days. The average rainfall at Greenwich in 63 years was 25.4 inches, so that the amount in 1878 was 3.8 inches in excess of the average. The rainfall in the second or spring quarter was excessive, no less than 13.2 inches being measured, or 7.6 inches above the average.

The wind blew at the mean velocity of 11.2 miles an hour, or 0.4 mile above the average of 30 years 1849–78.

Although the above remarks refer to observations made principally “about London,” Mr. Glaisher states that they apply generally to the whole country.

The meteorology of this year, 1878, is fully described on pp. xlix–lii, by Mr. Glaisher, F.R.S., who also shows in his tables the meteorological variations at different places. See pp. xcvi–ci.

Prices.—The commercial and financial history of 1878 was worse than that of any of the previous four years; and prices of commodities, and wages, continued to decline. Among the chief causes which contributed to

the general state of depression were the continued prevalence of strikes in most of the great trades, inactivity in the iron and coal industries, agricultural distress, bank failures, war between Russia and Turkey, and rupture between the Indian Government and the Ameer of Afghanistan.

As the harvest of 1877, from which the wheat supply of 1878 should be derived, was unsatisfactory, there were large importations in 1878 of foreign wheat, at low prices. The average price of wheat, which was 56s. 9d. per quarter in 1877, fell to 46s. 5d. in 1878.

The area under wheat in the United Kingdom* in 1877 was 3,321,065 acres against 3,124,342 acres in 1876, but the average number of acres under wheat in the three years 1876-78 was considerably below the acreage in the several years 1869-75.

The quantity of meat imported in 1878 (1,315,004 cwts.) was slightly in excess of that imported (1,277,686 cwts.) in the previous year. The average price of beef per lb. by the carcass at the Metropolitan Meat Market in 1877 was 6½d., and of mutton 7d.; in 1878 the average prices were the same.

TABLE VI.—QUANTITY OF MEAT IMPORTED in the Eight Years, 1871-8.

Total Meat (exclu- sive of Pork)	599,252	634,995	601,144	646,347	531,908	788,973	1,277,686	1,315,004

Comparing the number of animals imported in 1878 with the number in 1877, there was an increase in oxen and bulls of 48,482, in sheep and lambs of 18,070 and in swine of 35,874, while in the number of calves there was a decrease of 3164.

TABLE VII.—NUMBERS AND VALUE OF ANIMALS IMPORTED in 1876-8.

ANIMALS.	NUMBERS.			VALUE.		
	1876.	1877.	1878.	1876.	1877.	1878.
Oxen and Bulls	168,958	148,619	197,101	£ 3,554,480	£ 3,243,125	£ 4,455,832
Calves	44,998	30,172	27,008	298,941	130,132	131,668
Sheep and Lambs	1,041,329	874,035	892,125	2,226,952	2,107,466	2,171,904
Swine	43,558	20,037	55,911	172,723	87,599	200,803
Total	1,298,843	1,072,863	1,172,145	6,163,096	5,568,322	6,960,207
Cows	58,520	25,404	29,354	1,097,019	444,456	404,193
GRAND TOTAL	1,356,463	1,098,267	1,201,499	7,260,115	6,012,778	7,454,400

NOTE.—The figures in this Table, excepting for Sheep and Lambs, are derived from the Monthly Return of "Trade and Navigation of the United Kingdom," compiled by the Board of Trade, as the "Statistical Abstract" does not distinguish the several kinds of cattle or give the number of Swine.

* Including, for this purpose, the islands in the British Seas.

The price of oxen and bulls rose from 21*l.* 16*s.* to 22*l.* 12*s.*, of calves from 4*l.* 6*s.* to 4*l.* 18*s.*; sheep and lambs were of about the same value in the two years, viz., 2*l.* 8*s.*; and swine decreased in value from 4*l.* 8*s.* to 3*l.* 12*s.*, and cows from 17*l.* 10*s.* to 16*l.* 16*s.*

Potatoes were dear in 1877, the mean price for the best quality at the waterside market in Southwark being 146*s.* per ton, but in 1878 they rose to 156*s.* 6*d.* per ton.

Pauperism.—The average number of paupers (returned on the last day of each week) in each of the years 1877 and 1878 was—in-door 146,851 and 154,961—out-door 519,506 and 527,986, showing an increase in the number both of in-door and out-door paupers relieved.

MARRIAGES.

The unfavourable commercial and financial history of 1878 has already been noticed. The continued depression of trade and industry caused a further decline in the marriage-rate (persons married to 1000 persons living) which was 15·3, a rate below that of any year since 1842 and 1843, when the rates were 14·7 and 15·2 per 1000 respectively. The average annual rate in the ten years 1868–77 was 16·6, so the marriage-rate in 1878 was 1·3 per 1000 below this average.

The marriage-rates in three years of high prices and high wages and in five years of lower prices and lower wages are appended:—

Years.	Marriage-rate.	Increase or Decrease per cent. from year to year.
1871	- - 16·7	- - -
1872	- - 17·5	- - +4·79
1873	- - 17·6	- - +0·57
1874	- - 17·1	- - -2·84
1875	- - 16·8	- - -1·75
1876	- - 16·7	- - -0·60
1877	- - 15·8	- - -5·39
1878	- - 15·3	- - -3·16

The decrease in the marriage-rate in 1878 was general throughout England, but was most marked in the mining and manufacturing counties of Monmouth, Durham, Northumberland, Stafford, York, South Wales, and Nottingham (counties where the rate is nearly always high), and in the corn-growing and grazing counties of Cambridge, Huntingdon, Salop, Leicester, Gloucester, and Oxford. This may be seen on reference to Table 9, p. lxii., where the marriage-rate in 1878 is contrasted with the average annual rate in the previous ten years. The decrease in the rate in the counties of Monmouth, Durham, and Northumberland amounted to no less than 27, 23, and 21 per cent. respectively.

Some of the chief causes which contributed to the fluctuation in the marriage-rate in England and Wales during the forty years 1839–78 are shown in Table 69. The quantities of imported wheat retained during this period in the United Kingdom for home consumption are there shown, together with the value of imports and exports.

The value of *imports*, which was almost stationary in the seven years 1864–70 increased from 303,257,493*l.* or 9*l.* 14*s.* 1*d.* per head of population in 1870, to 394,419,682*l.* or 11*l.* 15*s.* 10*d.* per head in 1877. In

1878 the value fell to 368,770,742*l.* or 10*l.* 18*s.* 3*d.* per head of population. On the other hand the value of the *exports* of British and Irish produce attained a maximum in 1872 of 256,257,347*l.* or 8*l.* 1*s.* per head of population : since 1872 their value has gradually declined, and, in 1878, it fell to 192,848,914*l.*, representing only 5*l.* 14*s.* 1*d.* per head of population, a result probably due partly to a falling off in the demand for British produce and manufactures, and partly to the decrease in the value of goods exported.

These figures reflect the general industrial depression, and consequent closing of factories, mines, &c., which necessitated a reduction in the number of hands employed and a more economic habit of living on the part of many connected with such concerns ; and as men do not generally choose to marry in a period of reduced or uncertain incomes, but wait for more prosperous times, there is ample reason for the decrease that has taken place in the marriage-rate during the last five years.

Forms of Marriage.—190,054 marriages were celebrated during the year 1878 ; 137,969, or 72·6 per cent., according to the rites of the Established Church, and 52,085, or 27·4 per cent., otherwise.

Of the former, 28, or ·02 per cent., were by special license ; 15,498, or 11·29 per cent., by license ; 118,414, or 86·22 per cent., after banns ; and 3,389, or 2·47 per cent., by Superintendent Registrar's certificate. The particular form of marriage was not specified in 640 instances.

In the English Church for some reason or other opinion has, since 1861, set in favour of marriage after the proclamation by banns of the names of bride and bridegroom in the face of the congregation. The subjoined table shows the proportions of marriages of the Established Church according to the forms of license, banns, and Superintendent Registrar's certificate at different periods. Thus, the number of marriages by license increased from 15 per cent. in the five years 1841-5 to 16 per cent. in the five years 1856-60, and then gradually fell off to 11 per cent. in the year 1878. The number of marriages after banns declined from 83 per cent. in 1841-5 to 81 per cent. in 1856-60, after which period the number gradually increased, until in 1878 the proportion per cent. reached 86.

TABLE VIII.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-78.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS OF MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.*				
	Total.	Special License.	License.	Banns.	Superinten- dent Registrar's Certificate.
1841-45 - -	100	·01	15·42	83·28	1·29
1846-50 - -	100	·01	15·47	82·39	2·13
1851-55 - -	100	·01	15·58	81·53	2·88
1856-60 - -	100	·01	16·01	80·88	3·10
1861-65 - -	100	·01	14·93	81·94	3·12
1866-70 - -	100	·01	13·56	83·43	3·00
1871-75 - -	100	·01	11·58	85·71	2·70
Year 1876 - -	100	·02	11·89	85·59	2·50
" 1877 - -	100	·01	11·55	85·96	2·48
" 1878 - -	100	·02	11·29	86·22	2·47

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

It is to be regretted that some of the clergy still omit to insert in the marriage register the words "by license," &c., thus rendering the returns incomplete: the 640 instances of this kind in 1878 were equal to 46 per cent., which shows little or no improvement on the proportions of the last few years. The following are the proportions per 1000 Church marriages from 1841:

Years.	Mean Annual Number.
In the five years 1841-45	159
" " 1846-50	122
" " 1851-55	41
" " 1856-60	29
" " 1861-65	25
" " 1866-70	20
" " 1871-75	7
Year 1876	4.7
" 1877	4.8
" 1878	4.6

Although the proportional number of cases was nearly the same in each of the years 1876, 1877, and 1878, the results in the annexed table show that the proportions varied considerably in the different Registration Divisions in the three years.

TABLE IX.—PROPORTION of MARRIAGES in the ESTABLISHED CHURCH not described whether by LICENSE, by Banns, or by SUPERINTENDENT REGISTRAR'S CERTIFICATE.

REGISTRATION DIVISIONS.	Proportions in 1000 Church Marriages.		
	1876.	1877.	1878.
ENGLAND - - -	4.69	4.79	4.64
London - - - -	1.15	0.73	0.49
South-Eastern Counties - -	8.14	11.16	10.45
South Midland Counties - -	9.71	10.17	13.92
Eastern Counties - - -	13.83	10.11	11.70
South Western Counties - -	10.98	11.38	8.74
West Midland Counties - -	5.38	6.08	4.16
North Midland Counties - -	4.22	4.48	5.17
North Western Counties - -	0.68	1.00	1.29
Yorkshire - - - -	3.38	3.00	2.66
Northern Counties - - -	3.71	3.63	1.29
Monmouthshire and Wales -	7.59	5.70	8.75

Of the 52,085 marriages not according to the rites of the Establishment, 7,980, or 15.32 per cent., were solemnized in the registered places of Roman Catholics, and 21,484, or 41.25 per cent., in those of other principal Christian denominations, while 22,056, or 42.34 per cent., took

place in the offices of Superintendent Registrars without any religious rite. Sixty, or '12 per cent., were celebrated according to Quaker rites, and 505, or '97 per cent., were marriages of Jews.

First Marriages; Re-marriages.—Of the 380,108 persons married in 1878, 164,265 were bachelors, 171,474 were spinsters, 25,789 were widowers, and 18,580 were widows; so of 100 men married 13·6 and of 100 women 9·8 had been previously married.

Of the bachelors, 156,037 married spinsters, and the remaining 8,228 married widows.

Of the spinsters, 156,037 were married to bachelors and the remaining 15,437 to widowers.

Of the 25,789 widowers who re-married, 15,437 wedded spinsters, and 10,352 wedded widows; and of the 18,580 widows, 10,352 were re-married to widowers and 8228 to bachelors.

Table 10 of the preliminary Tables shows the proportional number of re-marriages of widowers and widows in each county.

The number of marriages of divorced persons in 1878 was 107, or 25 more than in 1877. Of 57 divorced men who re-married, 43 married spinsters, and 12 married widows. Of 52 divorced women re-married, 32 were married to bachelors, and 18 to widowers. There were two marriages in which both the bride and bridegroom had been previously divorced.*

Ages at Marriage.—Of the 190,054 couples who married in 1878 the ages of both parties were recorded in 149,897 cases, so that in no fewer than 40,157 instances the precise ages were not returned by the officiating Minister, or by the Registrar of Marriages; 21·1 per cent., therefore, of the returns were imperfect in this respect, a result which shows very little improvement on that (21·6) of the previous year.

The gradual improvement which has taken place in England during the last 21 years is shown in the subjoined Table:—

TABLE X.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER in ENGLAND, 1858–78.

YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8
1865	35·1	1875	23·7
1866	33·6	1876	22·8
1867	33·5	1877	21·6
		1878	21·1

* The number of decrees of divorce pronounced by Her Majesty's Court for Divorce and Matrimonial Causes in the year ending 31st October 1878 was, *nisi* 496, absolute 292.

As will be observed in Table XI. the proportions vary in different parts of the country; thus in Yorkshire only 8·7 and in the Northern counties 9·7 per cent. of the returns were incomplete as to age, whereas to every 100 marriages in the South Midland counties the number of cases in which the ages of both parties were not returned was 26·4; but the returns were most imperfect in London where the proportion was 39·5 per cent.

TABLE XI.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER, in each REGISTRATION DIVISION in 1877 and 1878.

REGISTRATION DIVISIONS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.		REGISTRATION DIVISIONS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	
	1877.	1878.		1877.	1878.
Yorkshire - - -	8·7	8·7	Eastern Counties - -	24·2	23·4
Northern Counties - -	9·9	9·7	South Eastern Counties -	24·8	24·2
North Western Counties -	15·2	13·2	South Western Counties -	25·3	24·7
Monmouthshire and Wales	13·9	13·6	South Midland Counties -	27·1	26·4
West Midland Counties -	17·9	18·5	London - - - -	40·4	39·5
North Midland Counties -	21·5	21·0			

I should be glad if the clergy, at the time of registering the marriage, would state that it is of considerable importance, not only to the parties themselves that their precise ages should be returned either for tracing pedigree or for proof of personal identification in establishing title to property—but that such particulars would also enhance the value of these national records for purposes of statistical investigation.

The mean age at marriage as determined from the 149,897 couples whose ages were stated in the year 1878, including the re-married, was 27·9 years for men, and 25·8 for women. For 131,212 bachelors it was 25·8 years, and for 136,179 spinsters 24·4 years. The mean age at marriage of 18,685 widowers was 43·1 years, and of 13,718 widows 39·6 years. These mean ages are almost exactly the same as those of ten years ago.

Minors.—The numbers of men and women under 21 years of age who married in 1878 were 14,785 and 41,062 respectively; so that of every 100 men married 7·78 were not of full age, and of every 100 women married 21·61 were not of full age.

The increasing tendency to early marriage (indicated by the proportional number of minors married) received a check in 1875. From 1848 to 1874* the proportion had gradually increased, but the stagnation in trade, and consequent reduction in the prices of labour in recent years caused even young people to take a less cheerful view of their prospects; accordingly the proportional number of minors of both sexes to 100 couples fell from 15·54 in 1874, to 14·70 in 1878, a reduction equal to 5·4 per cent.

* See preliminary Table No. 8.

TABLE XII.—PROPORTIONS per Cent. of MINORS who MARRIED, 1841-78.

PERIODS of Five Years.	To every 100 Marriages the proportion of Males and Females under 21 Years of Age.		
	Males.	Females.	Mean.
1841-45	4.38	13.33	8.86
1846-50	4.48	14.23	9.36
1851-55	5.45	17.28	11.37
1856-60	5.94	18.65	12.30
1861-65	6.55	19.87	13.21
1866-70	7.08	20.84	13.96
1871-75	8.15	22.22	15.19
Year 1876	8.25	21.99	15.12
„ 1877	8.11	22.02	15.07
„ 1878	7.78	21.61	14.70

The counties showing the greatest proportional decrease are Monmouthshire, Shropshire, Northumberland, Cambridgeshire, South Wales, Cumberland, Herefordshire, Cheshire, Worcestershire, Leicestershire, Derbyshire, West Riding of Yorkshire, Staffordshire, and Cornwall. In London and in certain counties there was an increase.

Signature in Marriage Registers.—The result of the efforts made during the last quarter of a century to provide for the better education of the people is reflected, year by year, in the diminution of the number of persons who sign the marriage register with marks. Of the 65,334 persons who, in the year 1878, signed this document with marks, 27,740 were men, and 37,594 were women; of 100 men married 85, whereas of 100 women married only 80, were able to write their names.

Table XIII. shows the improvement that has been effected during the last thirty-eight years.

TABLE XIII.—SIGNATURE of the MARRIAGE REGISTER by MARKS, 1841-78.

PERIODS of Five Years.	To every 100 Marriages the proportion of Men and Women who signed the Marriage Register with Marks.		Quinquennial Decrease in the proportions who signed with Marks.	
	Men.	Women.	Men.	Women.
1841-45	32.6	48.9	1.2	2.7
1846-50	31.4	46.2	1.2	2.7
1851-55	30.2	43.5	3.1	5.4
1856-60	27.1	38.1	3.5	5.2
1861-65	23.6	32.9	3.1	4.6
1866-70	20.5	28.3	2.0	3.1
1871-75	18.5	25.2	—	—
Decrease in the 35 years 1841-75 -			15.5	25.6
Year 1876	16.3	22.1	—	—
„ 1877	15.3	20.9	—	—
„ 1878	14.6	19.8	—	—

In 13,965 instances in 1878 *both* the husband and the wife were unable to write their names, and in 37,404 cases either the husband or the wife signed with marks. Of 100 marriages thirty-one years ago (1847) there were 24 in which both husband and wife signed with marks, now (1878) the proportional number is only 7.

Table XIV. shows the state of elementary education, as indicated by the proportional number of men and women who signed the marriage register with marks, in the different divisions of the United Kingdom for the most recent years for which the abstracts are available.

TABLE XIV.—SIGNATURE OF THE MARRIAGE REGISTER BY MARKS IN DIFFERENT DIVISIONS OF THE UNITED KINGDOM.

—	Years.	To every 100 Marriages the proportion of Men and Women who signed the Marriage Register with Marks.	
		Men.	Women.
ENGLAND AND WALES - {	1877	15·3	20·9
	1878	14·6	19·8
SCOTLAND - - - {	1874	9·1	18·0
	1875	8·6	16·9
IRELAND - - - {	1877	30·4	36·0
	1878	28·5	33·7

The annexed table shows the mean proportion of men and of women who signed with marks to every 100 marriages, in the several counties of England, in each of the periods of five years 1841-5 and 1874-8.

These proportions show that the elementary education of the people has made considerable progress during the last thirty-three years, reckoning from the middle of the first period to that of the second period.

The counties are arranged in the order of education of *men*, and it will be observed that in no county are as many men able to write as in Westmorland where the per-centage of those who make use of marks instead of writing their names is only 7·4. London (8·0) and the counties of Surrey extra-metropolitan (10·8), Middlesex extra-metropolitan (11·0), Hants (11·7), Northumberland (12·0), Devon (12·3), East Riding of York (12·4), Cumberland (13·0), and Sussex (14·0), contrast favourably with the rest.

The counties showing the greatest educational deficiency are Worcestershire (28·4), Monmouthshire (28·3), Suffolk (25·5), Bedfordshire (24·8), Hertfordshire (24·7), Norfolk (23·8), Cambridgeshire (23·5), and North and South Wales (23·6 and 22·7).

The counties in which the greatest progress (represented by the greatest proportional decrease in the per-centage of men who signed with marks) has been made in the thirty-three years are not always those where there was most room for improvement; thus the decrease per cent. was greatest among men in Surrey extra-metropolitan (69·8), Middlesex (65·8), Westmorland (62·2), Hants (62·0), and Essex (60·8), and least in Cumberland (19·8), Durham (20·6), North Riding of York (30·1), and London (32·2).

As regards the education of *women*, South Wales, where the proportion who signed with marks was 36·8 per cent. is most benighted, then follow Worcestershire (35·0), Lancashire (32·2), Monmouthshire (32·0), North Wales (31·4), Bedfordshire (30·6), Durham (30·0), and the West Riding of Yorkshire (29·7). It is, however, gratifying to observe that the

proportional decrease in the per-centage of women who signed with marks has been during the thirty-three years as high as 77.4 per cent. in Surrey (extra-metropolitan), 77.1 in Sussex, 74.6 in Wiltshire, 73.8 in Essex, 73.2 in Berkshire, 73.1 in Middlesex (extra-metropolitan), and 72.3 in Hampshire.

TABLE XV.—PROGRESS OF ELEMENTARY EDUCATION in the several COUNTIES of ENGLAND as indicated by the DECREASE in the NUMBER of PERSONS who sign the MARRIAGE REGISTER with MARKS. (Counties arranged in the order of the Education of Men in the Period 1874-78.)

Although as a rule elementary education is more neglected among women than men, this is not the case in some counties, for the education of women, judged by this test, is not so deficient as that of men in Surrey (extra-metropolitan), Middlesex (extra-metropolitan), Hants, Sussex, Kent (extra-metropolitan), Lincoln, Berks, Rutland, Oxford, Wilts, Dorset, Essex, Somerset, Hereford, Hunts, Bucks, Cambridge, Norfolk, Hertford, and Suffolk. The disparity in the educational abilities of the two sexes is striking in Durham, Lancashire, Nottinghamshire, Suffolk, Yorkshire, and Wales. In Westmorland, Hampshire, and the home counties, however, the education of both sexes is fairly advanced.

Up to 31st August 1878 provision had been made in England and Wales for the attendance, in 16,293 schools receiving annual Government grants, of 3,942,337 scholars. In the year 1868 accommodation was provided for only 1,663,043 children, so that additional provision has been made during the ten years for 2,279,294 scholars. This increase, however, is still below what is necessary. On the day of inspection 2,944,127 scholars were present, and the average daily attendance was 2,405,197, being 30 per cent. below the number, which it is estimated, should be under daily instruction in efficient schools. 3,495,892 scholars were on the registers, of whom 1,189,557 were under seven years of age, 2,158,179 were aged seven and under 13 years, and 148,156 were aged 13 years and upwards.

In London the average number of scholars on the roll during the six months ending Christmas 1878 was 444,322, the average daily attendance being 350,507. This is about double the number in the year 1871, before the School Board established their first school, when the registered number at efficient schools was only 222,518, and the average daily attendance was 174,301.

And, looking at the spread of elementary education as evidenced by the constantly decreasing number of men and women failing to write their names in the marriage register, the country is to be congratulated on the success attending its efforts in this direction, which will doubtless be shown in a more striking manner when the children now receiving education at Board and other schools become men and women.

Buildings registered for the solemnization of Marriages.—The number of these buildings on the register on the 31st of December 1878 was 8,251 showing an increase of 200 during the year, to which number the Presbyterians of all descriptions contributed 5, the Independents 31, the Baptists 23, the Roman Catholics 7, the Unitarians 4, the various sects of Wesleyan Methodists 113, the Calvinistic Methodists 13, the New Jerusalem Church 2, and other religious denominations 2.

Certified Places of Meeting for Religious Worship.—The number of certified places of meeting for religious worship on the register on the 31st of December 1878 was 19,977, showing an increase of 431 during the year. The following is a list of the descriptions of the congregations on whose behalf places have been certified. Those printed in *italics* have been added since the publication of the list in the last Report :—

Advents.	Baptists, different sects— <i>cont.</i>	Catholic and Apostolic Church.

Independent Unionists.	Reformers.	Wesleyan Reform Glory
Independent Wesleyans.	Revival Band.	Band.
Inghamites.		Wesleyans.
		Working Man's Evangelistic
		Mission Chapels.

BIRTHS.

Although the births in the year 1878 were more numerous than in any previous year, the number (891,906) was only 3,706 in excess of that registered in 1877. The birth-rate was 35.9 per 1000, nearly the same as the average annual rate in the previous ten years, but below the rates in 1876 and 1877, which were respectively 36.6 and 36.2. Considering the depression in the marriage-rate in recent years the birth-rate has been well maintained; indeed the rate in 1878 though below the respective rates in 1876 and 1877, was higher than it was in any year previously to 1876 excepting 1874.

The birth-rate varies in different localities, owing chiefly—as has been shown in previous reports—to difference in local industries. The rate of 1878, compared with the average of the previous ten years, was high in London 36.3, in the county of Northampton 35.9, in Essex 35.5, Norfolk 31.4, Wilts 31.5, Warwick 39.4, Leicester 40.1, Rutland 31.9, Lincoln 34.0, Nottingham 41.0, Derby 41.1, Lancaster 41.2, East and North Ridings of York 38.3 and 36.6, Cumberland 37.3, Westmorland 30.4, and in North Wales 32.1.

The lowest rates in 1878 were generally in those counties where there is a comparatively low proportion of married women at the child-bearing ages, viz., Cornwall 27.5, Surrey (extra-metropolitan) 28.7, Hereford 28.8, Dorset 28.9, Devon 29.5, &c. Table XVI. shows how much the general birth-rate in each county in the ten years 1868–77 was affected by the proportion of married women aged 20–40 living in the several counties.

TABLE XVI.—NUMBER OF MARRIED WOMEN aged 20-40 Years, to every 100 WOMEN at the same Age living in 1871, and the AVERAGE ANNUAL NUMBER OF BIRTHS to 1000 PERSONS living in the 10 Years 1868-77 in the several COUNTIES of ENGLAND.

Sex.—455,048 boys and 436,858 girls were born in 1878, so 1042 boys were born to every 1000 girls. The proportions differ in the several counties, and range from 953 in Westmorland, 997 in Northampton, and 1015 in Middlesex (extra-metropolitan), to 1074 in Norfolk, 1075 in Lincoln, and 1090 in Hertford. As shown in the last report—the excess in the proportional number of boys born to 1000 girls born in England and Wales has declined from 1050 in the ten years 1838-47 to 1039 in the ten years 1868-77.

Fecundity.—The annual number of legitimate births, in the three years 1875-7 to 1000 married women estimated to be living, aged 15 and under 45, was 302. In France the proportional number in the same period was 196.

Some remarks on the proportional number of births to married women at the child-bearing ages, in France, will be found on pp. xlvii-viii.

Children born out of wedlock.—The proportion of women bearing illegitimate children to the total female population of the child-bearing ages is comparatively small. Thus the births registered as illegitimate amounted to 42,100, being in the proportion of 4'7 to every 100 children born. Though this is the same proportion as that in the previous year, it is considerably lower than the average (5'8) in the 24 years 1855-78.

As shown in previous reports, high or low rates of illegitimacy may to some extent be explained by large or small proportions of spinsters aged 20-40 in the female population; thus it will be seen by the subjoined table, that in the counties of Hereford, Westmorland, Cumberland, and Salop, where the illegitimate births equalled from 7 to 8 per cent. of the total births, the spinsters aged 20-40 formed upwards of 40 per cent. of the female population.

TABLE XVII.—PROPORTION of ILLEGITIMATE CHILDREN to every 100 BIRTHS in the several COUNTIES of ENGLAND and WALES in the 10 years 1855–64 and 1865–74, and in the 4 years 1875–8.

[Counties arranged according to rates prevailing in 1875–8.]

DEATHS.

In 1878, the deaths registered in England were 539,872; they were 39,376 above the number registered in the previous year. Forty years ago the deaths numbered a third of a million, they now exceed half a million annually.

The rate of mortality in 1878 was 21·7 per 1000; it was in excess of that of 1877, but identical with the annual average in the eight years 1871-78. Compared with the numbers in the previous year, the deaths in 1878 from small-pox were less than half; the deaths from measles were also fewer, but the deaths from scarlet fever, diphtheria, whooping-cough, and fever were more numerous: some high temperatures in the summer raised the mortality considerably from infantile diarrhoea.

The diseases which prevailed and the fatality of the various causes are shown in Dr. Farr's letter at pp. 225-6 in the Appendix.

Town death-rates.—The annexed table (XVIII.) shows the annual rate of mortality in the urban and rural registration districts since 1847.

The average annual death-rate in the urban districts in the ten years 1851-60 was 24·7, in the next ten years it was nearly the same, 24·8. When it is borne in mind that increased density of population ordinarily has the effect of raising the death-rate, and that there has been a constant tendency towards increased density, these results indicate that the laws affecting the public health have been administered with success; this is more apparent in the mean annual death-rate of these urban districts in the succeeding eight years 1871-8, which was 23·6.

In the rural registration districts there has also been improvement, but not to the same extent.

Similar powers to those in force for urban populations are—from time to time—conferred upon rural authorities for purposes of sanitary administration; but it is questionable whether there should be any difference in the sanitary regulations governing urban and rural districts. Town populations are rapidly increasing, and equivalent sanitary arrangements are requisite; but as preventive are better than remedial measures, the laws affecting the public health should not be relaxed outside the town areas, and it is well known that many sanitary defects exist in our villages generally, especially with regard to water supply and drainage; the cottages of the labouring population also require much improvement.

TABLE XVIII.—ANNUAL RATE OF MORTALITY per 1000 in the TOWN and COUNTRY DISTRICTS of ENGLAND and WALES in the 32 Years 1847-78.

Mean of 32 Years 1847-78	355		22·3	24·7	19·7

How best to promote the health of our town populations is one of the leading questions of the day. Previously to the Royal Commission appointed in 1844 to inquire into the sanitary condition of large towns and populous districts, the subject had not attracted the attention it deserved, but from that time its importance became more evident, and in 1848 an Act (11 & 12 Vict. c. 63) was passed for the object of improving the sanitary condition of towns and populous places; the Act provided for the constitution of Local Board districts and a central Office to be called the "General Board of Health." The Board was to be continued only for five years, but the period was extended from time to time until 1858, when the powers of the General Board of Health were transferred to a Department of the Privy Council, presided over by a Medical Officer, to advise and report on the health requirements of the population, whose appointment had been previously provided for by an Act passed in 1855.

By the Local Government Board Act of 1871, the administration of Local Government and Sanitary Improvements, the powers and duties of the Medical Department of the Privy Council, and the business of the Poor Law Board were transferred to the Local Government Board, but the year 1872, when the Public Health Act was passed, may be said to be the commencement of a new era in the promotion of public Health. The Act provided that the country should be divided into "urban" and "rural" sanitary districts, each to be provided with a medical officer of health, so that local sanitary authorities are now held responsible for the health of the communities under their charge. The Act has only been in operation six years and therefore there has barely been time to fully develop its administrative machinery, but nevertheless its successful working can be traced in the improved sanitation of the country. The Acts relating to the Public Health in England were consolidated and amended by the Public Health Act of 1875.

Previously to 1865 death-rates were published by the Registrar-General *annually* for no smaller areas than counties, but these results, for purposes of statistical and sanitary investigation, were not sufficiently localized, and in that year was commenced the publication of the mortality of the largest towns; the list of towns has since then been greatly extended.

The death-rates were also computed every *ten years* for each Superintendent Registrar's district, but in reviewing the comparative salubrity of different localities the area which these districts embrace is found to be too extensive for practical use, some of them comprising fourteen or more sanitary jurisdictions varying materially in character and density—some healthy, some unhealthy, some urban, some rural. Thus, therefore, the Superintendent Registrars' districts or Poor Law Unions, which are well adapted for other purposes, are no longer used for local administration of the laws relating to public health; the urban and rural sanitary districts, which comprise smaller areas, are better suited for this purpose.

TABLE XIX.—NUMBER of SANITARY JURISDICTIONS in ENGLAND and WALES on 31st December 1878, exclusive of the Metropolitan Districts.

ENGLAND & WALES, exclusive of London	37,243,859	21,277,093	1539	584	955	225	678	52

Seeing therefore that the sanitary district has become the recognised unit of local sanitary government, some scheme to digest national health statistics on this basis and on a plan commensurate with the importance of the subject would be of great practical value.

The causes of insalubrity that may be at work in any of the sanitary districts are now promptly discovered by medical observers and other authorities watching over these areas, acting in concert with the Medical Department of the Local Government Board, by whom the laws affecting the public health are administered.

On the last day of 1878 there were, exclusive of London, 1539 sanitary districts in England and Wales, of which 584 were rural and 955 urban. Of the 955 urban sanitary districts, 225 were boroughs, 678 local government districts, and 52 improvement Commissioners' districts. The correct population of all these will be known in 1881.

It would probably be sufficient at first to publish the following ten results, annually, for each of the urban districts: (1) the estimated population, (2) total births, (3) deaths from all causes, (4) deaths of infants under one year of age, (5) deaths from the seven principal zymotic diseases, and from each of the seven, (6) the birth-rate, (7) the death-rate from all causes, (8) the death-rate from the seven principal zymotic diseases, (9) the proportion of deaths from the seven principal zymotic diseases to 100 deaths from all causes, and (10) the proportion of deaths of infants under one year of age to 1000 births.

(Example.)

TABLE XX.—MORTALITY STATISTICS OF URBAN SANITARY DISTRICTS in the Year 1878.

Urban Sanitary Districts.	Estimated Population in the middle of the Year 1878.	Total Births.	Total Deaths.	Deaths of Infants under One Year of Age.	Deaths from the Seven principal Zymotic Diseases.								Annual Birth-rate to 1000 Persons living.	Annual Rate of Mortality per 1000 Persons living.		Proportion of Deaths from the Seven principal Zymotic Dis. to 100 Deaths from all Causes.	Deaths of Infants under One Year of Age to 1000 Births.
					Total from the Seven.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.		From all Causes.	From Seven principal Zymotic Diseases.

On the next two pages is another example, viz., a similar series of facts for London extending over a long term of years, and such a comparative table might be constructed for each of the sanitary districts (now represented by 29 registration districts) presided over by 47 Metropolitan Medical Officers of Health, in order to show the improvements that have been effected in different parts of London.

TABLE XXI.—LONDON.

YEARS.	Estimated Population in the middle of each Year.	TOTAL BIRTHS.	TOTAL DEATHS.	Deaths of Infants under One Year of Age.	DEATHS FROM THE PRINCIPAL

were not included until 1847; thus the figures in the above Table do not relate to the same area Births and Deaths.

weeks, and the proportions are calculated on the deaths registered in the same time. All the figures for years and also for years represented by 52 or 53 weeks.

To enable this information to be prepared, it would be necessary for the Registrars, in making out their usual quarterly returns, to furnish a summary of the results relating to each sanitary jurisdiction in their sub-districts, the detailed particulars of which they already supply periodically to the Medical Officers of Health.

Or, if the Registrars were instructed to distinguish in the first column of the death register (where the sanitary districts comprise parts of parishes or townships) the name of the urban district in which the death occurred, then the causes of death and the ages, together with some additional particulars, could be accurately abstracted at the Central Office for each of the sanitary districts of England.

The annual reports of the Medical Officers of Health often furnish the requisite results, and if these were uniform, the necessary particulars could perhaps be extracted and shown collectively for the sanitary jurisdictions, on the same principle as has been adopted for the causes of death of children under one year of age in certain large towns. *See Appendix, p. 258, Table 29.*

As regards rural sanitary districts, it is of almost equal importance that these should have the advantage of similar investigation, for as I have remarked earlier in this report our villages and outlying portions of towns stand in great need of sanitary supervision, and the publication of such figures as are here suggested could not fail to draw attention to so important a question.

The subjoined table shows the mortality from all causes in the twenty largest towns during the ten years 1868-77 and in the year 1878. For details relating to the mortality from seven of the principal zymotic diseases, &c., in each of these towns, see Tables 19-28, pp. 253-7.

TABLE XXII.—MORTALITY OF TWENTY LARGE ENGLISH TOWNS, 1868-78.

CITIES AND BOROUGHES.	ANNUAL DEATH-RATE PER 1000 LIVING (Years of 52 or 53 Weeks).

The remarkable reduction in the mortality of these towns will be better observed in the following table where the death-rates in the three years 1876-78 are contrasted with those in the previous five years.

TABLE XXIII.—MORTALITY OF TWENTY LARGE ENGLISH TOWNS, 1871-78.

[Arranged according to the Average Annual Rates prevailing in 1876-78.]

TOWNS.	Annual Rate of Mortality to 1000 living.	
	In the 5 Years 1871-75.	In the 3 Years 1876-78.
Mean - -	24·8	23·4
Portsmouth - - -	20·1	19·5
Brighton - - -	20·8	19·8
Nottingham - - -	24·8	21·4
Leicester - - -	25·8	21·8
Bristol - - -	23·6	21·9
Norwich - - -	24·4	22·5
London - - -	23·0	22·6
Bradford - - -	26·1	22·8
Hull - - -	25·3	23·0
Plymouth - - -	21·6	23·0
Newcastle-on-Tyne -	28·8	23·0
Sunderland - - -	26·4	23·1
Sheffield - - -	26·4	23·7
Leeds - - -	27·5	23·7
Wolverhampton - -	25·6	23·8
Birmingham - -	25·3	24·1
Oldham - - -	26·8	25·3
Salford - - -	28·0	26·3
Liverpool - - -	29·6	27·8
Manchester - - -	30·1	28·2

Mortality statistics of certain large *town districts* were first published in 1868. The towns were represented by entire registration districts, sub-districts, or groups of districts, and although the figures relating to them approximately indicate the sanitary condition of the several towns, the areas of these places are not conterminous with the municipalities they are taken to represent.

The annexed table shows the average annual death-rates in each of two periods comprised in the last eight years, arranged according to the average annual rates prevailing in the latter period 1876-8.

TABLE XXIV.—DEATH-RATES IN FIFTY LARGE TOWN DISTRICTS, 1871-78.

[Arranged according to the Average Annual Rates prevailing in 1876-78.]

TOWN DISTRICTS.	ANNUAL RATE OF MORTALITY TO 1000 LIVING.

Preston	32.4	7.2	29.4	5.1

In thirty-eight of these town districts the death-rate in the three years 1876-8 shows a reduction compared with the rate in the previous five years 1871-5. In thirteen town districts the death-rate was below 20 per 1000 (the rate laid down that none of our towns should exceed); in thirty-one town districts the rate was between 20 and 26 per 1000, and in six town districts it ranged from 26 to 29 per 1000.

Turning to the registration counties, it will be observed in the preliminary table No. 29, that the death-rate in 1878 was in excess of the average in Sussex, Berkshire, Northamptonshire, Bedfordshire, Essex, Suffolk, Norfolk, Wiltshire, Devonshire, Staffordshire, Worcestershire, Warwickshire, Rutlandshire, Lincolnshire, Lancashire, and the East Riding of Yorkshire; in London and South Wales the rate was also above the average.

Sex and age.—The deaths of 278,772 males, and of 261,100 females were registered in 1878. The death-rate of males was 23·0 per 1000 males living; that of females 20·5 per 1000 females living. The average rates in the 25 years 1848–72 were 23·4 for males and 21·4 for females. The deaths of males in the year were as 107 to 100 deaths of females; the average in 41 years being 104 to 100. These proportions are derived from the deaths among unequal numbers of males and females living, for there is an excess of females in the population. The deaths in 1878, were there *an equal number of both sexes* living, would be in the proportion of 112 deaths of males to every 100 deaths of females; the average proportion in 41 years was 109 to 100.

In Table XXV. the mortality at different ages in 1878 is compared with the average mortality at the same ages in the 25 years 1848–72, for each sex.

TABLE XXV.—ANNUAL RATE OF MORTALITY per 1000 Living in ENGLAND AND WALES at DIFFERENT AGES in the 25 years 1848–72, and in the year 1878.

85 & upwds.	309·7	284·4	326·6	288·5	+16·9	+ 4·1

Although the rates in 1878 at the younger ages compare favourably with the mean annual rate at those ages in the 25 years 1848–72, the mortality of children under five years of age was much higher than in the preceding year, owing to the large number of deaths from scarlet fever, whooping-cough, and diarrhoea. The excess in the death-rates of 1878 at the advanced ages was mainly due to the severe winter, which caused the death of many of the aged by diseases of the respiratory organs.

Since 1870 there has been a marked decrease in the mortality of children of both sexes under 5 years of age. The mortality of males, at ages between 5 and 25 years, has generally decreased during the last 41 years, at ages 25–35 it has remained nearly stationary, while at ages 35 and upwards it has increased. The mortality of females at ages between 5 and 45 years has diminished, at ages 45–55 it has remained nearly stationary, whereas at ages 55 and upwards it has increased. See preliminary tables 25–28.

TABLE XXVI.—ENGLAND. PROPORTIONAL MORTALITY at DIFFERENT AGES
per 1000 of POPULATION living at ALL AGES.

AGE.	25 Years 1848-72.	1875.	1876.	1877.	1878.
ALL AGES -	22·41	22·68	21·05	20·39	21·72

75—	1·68	1·84	1·61	1·60	1·72
85 and upwards -	·51	·54	·46	·47	·50

In the above Table (XXVI.) it will be seen how the mortality of the population in the aggregate is made up of deaths occurring at different ages; thus, the death-rate at all ages in 1878 was 21·72 per 1000 of population, this rate being 1·33 in excess of that in 1877; nearly the whole (1·02) of this excess was due to a higher rate of mortality among children under 5 years of age.

Table XXVII. shows the reductions in the mortality at the several ages in *London*, in the eight years 1871-8, compared with the average in the 30 years 1841-70.

DEATH-RATES OF CHILDREN.

Children under one year of age.—The proportional number of deaths of infants to births was higher in each of the twenty English towns in 1878 than in the previous year.

TABLE XXVIII.—PROPORTIONAL NUMBER OF DEATHS OF CHILDREN under ONE YEAR of AGE from ALL CAUSES to 1000 BIRTHS REGISTERED in ENGLAND AND WALES, and in TWENTY LARGE TOWNS, 1870-78.

[Arranged in the order of their average annual death-rates, 1870-77.]

* The rates for England and Wales are for the complete years, and not for the 52 or 53 weeks.

In eight of these towns the proportion was above the average of the eight years 1870-7, viz., Portsmouth, Brighton, Plymouth, London, Sunderland, Wolverhampton, Hull, and Norwich. The increased infant mortality in 1878 compared with the average, was due to the prevalence of zymotic diseases, chiefly whooping-cough and diarrhoea. For

the proportional mortality of infants from *different causes* in some of the large English towns see Appendix, Table 29.

Children under five years of age.—Out of 1000 persons living of all ages in England 22 died in 1878, of whom 9 were children under five years of age: any fluctuation in the mortality of children of this age greatly influences the mortality at all ages, thus the increase in the general death-rate in 1878, compared with the mortality in the previous year, was chiefly due to a higher rate among children.

The proportional number of children under five years of age dying in 1878 to 1000 children living of the same age was 66·7, and with this may be contrasted the proportional numbers in the twenty towns shown in the subjoined table.

TABLE XXIX.—ESTIMATED POPULATION and DEATHS in 1878, and ANNUAL RATE OF MORTALITY, of CHILDREN under FIVE YEARS OF AGE, in TWENTY LARGE TOWNS, 1873-78.

TOWNS.	CHILDREN UNDER FIVE YEARS OF AGE.

NOTE.—The deaths of children under five years of age in eighteen of the above towns were supplied by the Medical Officers of Health.

* Mean of four years 1874-77.

† The Medical Officer of Health for Hull was unable to supply the information.

If the towns are arranged from the lowest rate at this age in 1878, Portsmouth stands first with a rate of 59·4, then Brighton 65·8, Bristol 66·2, Newcastle-on-Tyne 73·2, Wolverhampton 74·8, London 78·6, Bradford 80·3, Leicester 82·9, Nottingham 82·9, Manchester 83·4, Leeds 84·6, Norwich 84·7, Glasgow 86·2, Oldham 92·0, Sunderland

93·0, Salford 93·8, Birmingham 95·2, Sheffield 95·9, and Plymouth 98·1, while Liverpool 103·6, stands last on the hygienic scale.

Seasons.—The weather during the first three months of the year, with the exception of the last nine days, was exceedingly mild, the mean temperature of the air for the quarter (41°·5) being 2°·8 in excess of the average of 107 years. During these nine days, however, the weather was "bitterly inclement," snow fell on each of these days accompanied with very cold N. and N.E. winds, and the average daily deficiency of temperature was 6½°; more trying weather than that on the 29th and 30th March had not been experienced during the winter. 139,373 deaths were registered during these three winter months, and the mortality was at the annual rate of 22·7 per 1000 of population, the average rate for this quarter in the preceding ten years being 24·0 per 1000. The mean reading of the barometer was high, and the rainfall at the Royal Observatory, Greenwich, was below its average in each month; the rainfall for the quarter showing a deficiency of two inches compared with the average of 63 years.

The mean temperature of the air during the second quarter of the year was 54°·6, or 2°·3 in excess of the average of 107 years. During the first 11 days of the quarter the weather was cold, and ungenial, but after this, a warm period set in; on the 20th May the weather again turned cold, but changed on the 20th June, and from this date to the end of the month the weather was warm. This quarter was remarkable for a deficiency of sunshine and for almost continuous rain during the month of May; the total fall for the quarter at Greenwich was no less than 13·2 inches, exceeding its average by 7·6 inches; so heavy a fall, for these three months, had not occurred since 1815. The mean reading of the barometer was 0·104 inch below its average; during May it was 0·168 inch below, and back to 1841 there was no instance of so low a mean reading for this month. The exceptional meteorological conditions of the season, however, did not unfavourably affect the public health. 129,096 deaths were registered during the 91 days, equal to an annual rate of 20·8 per 1000 of population, the average being 21·1 per 1000.

The temperature during the quarter ending 30th September was changeable, but exceeded the average in each month of the quarter; indeed in July the excess was as large as 1°·5. The hottest day of this month was the 19th when the temperature in the shade exceeded 80° at all the stations except two; at many stations it was nearly 90°, at Halifax 90°·2, and at Leeds 92°. High temperatures during this quarter were the cause of increased fatality from diarrhoea. 129,664 deaths were registered from all causes during the quarter, the death-rate being at the annual rate of 20·7, nearly the same as the average. The mean temperature of the quarter was 60°·8 or 0°·9 above the average. The rain-fall at Greenwich measured 6·5 inches, of which 0·3 inch fell in July, 5·4 inches in August, and 0·8 inch in September, being respectively 2·3 inches below, 3·0 inches above, and 1·6 inches below the average of 63 years; while the rain-fall in August was excessive, being greater than in any August during the preceding 63 years the fall in July was very deficient, and going back to the year 1815 there are but three instances of so small a fall in July. The mean reading of the barometer was 29·863 inches in July, 29·586 inches in August, and 29·819 inches in September, being respectively 0·060 inch above, 0·206 inch below, and 0·015 inch above the average of 37 years.

With the exception of the first 21, and the last six days of the December quarter, the weather was cold; on the 6th December the cold increased in intensity, on several days between the 6th and 25th December the mean temperature was more than 12° below its average, and on the 24th it was as much as 17½° below. The cold acted prejudicially on

the public health, and 141,739 deaths were registered during this quarter, equal to an annual rate of 22·6 per 1000 of population, or 0·8 per 1000 in excess of the average for the corresponding quarter of ten previous years. The mean reading of the barometer in each month was below the average. The rain-fall at Greenwich was 1·7 inches in October, 3·5 inches in November, and 1·2 inches in December, being respectively 1·1 inches below, 1·1 inches above, and 0·9 inch below the average of 63 years. The total fall for the quarter was 6·4 inches, or 0·9 inch below the average.

Deaths in Public Institutions in England.—These abstracts* show the number of deaths in 1878 in the public institutions of each registration sub-district. The total deaths registered in England and Wales were 539,872, out of which number 51,425, or 9·5 per cent., occurred in 1459 public institutions of England and Wales. Of these 51,425 deaths, 33,534, or 65 per cent., occurred in 718 workhouses, workhouse infirmaries, or workhouse schools; 13,136, or 26 per cent., in 658 hospitals or infirmaries; and 4755 or 9 per cent., in 83 lunatic asylums; so of the total number of persons who died in England in 1878, one out of 10 took place in one or other of 1459 public institutions, one out of 16 occurred in a workhouse, one out of 41 in an hospital, and one out of 114 in a lunatic asylum. Only those deaths registered in workhouses, hospitals and infirmaries, and public lunatic asylums are here noted, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions; and the abstracts of such deaths afford the means of correcting the mortality, which in some districts and sub-districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.

The following Table (XXX.) shows the number of hospitals of all classes in England and Wales in each of the ten years 1869 to 1878.

TABLE XXX.—NUMBER OF DEATHS REGISTERED IN HOSPITALS IN ENGLAND AND WALES in each of the Ten Years 1869-78.

YEARS.	HOSPITALS.				
	Number of Hospitals.	Increase in the number of Hospitals during the Year.	DEATHS.		
			Persons.	Males.	Females.
1869	241	—	9,747	6377	3370
1870	266	25	10,479	6829	3650
1871	346	80	13,706†	8902	4804
1872	450	104	11,638	7927	3711
1873	500	50	11,209	7594	3615
1874	544	44	11,963	8029	3934
1875	582	38	12,548	8494	4054
1876	611	29	12,354	8143	4206
1877	644	33	12,579	8332	4238
1878	658	14	13,136	8596	4540

† The large number of deaths recorded in 1871 is owing to the epidemic of small-pox from which the country was suffering in that year. Many temporary hospitals were erected to meet the requirements of persons suffering from this disease.

The number of hospitals in 1878 was 658; the increase in recent years is mainly attributable to additional accommodation afforded for the sick in cottage hospitals.

* See pp. 99-120.

Further hospital accommodation in large towns is greatly needed for the treatment of persons suffering from infectious diseases.

The deaths of men in hospitals are about double those of women owing chiefly to men being more exposed in their occupations to accidents and injuries than women.

The deaths of 2700 male and 2055 female lunatics were registered in the year 1878 as occurring in 83 public asylums; insanity, therefore, is somewhat more frequently a cause of death among males than females, especially when the larger proportion of females in the population is considered.

TABLE XXXI.—MORTALITY STATISTICS of LUNATICS in ASYLUMS in ENGLAND and WALES, in each of the Ten Years 1869-78.

YEARS.	PUBLIC LUNATIC ASYLUMS.				MORTALITY.*		Proportion of Lunatics in all Asylums, at the end of each Year, to 1000 Population.
	Number of Asylums.	Deaths of			Deaths to 1000 average daily number of residents.		
		Males.	Females.	Persons.	County and Borough Asylums.	All Asylums (including Private and Idiot Asylums).	
1869	72	1975	1594	3569	111·6	107·2	2·43
1870	78	1989	1633	3622	108·1	102·9	2·40
1871	82	2314	1783	4097	107·1	102·3	2·54
1872	83	2160	1634	3794	95·7	91·9	2·58
1873	79	2425	1830	4255	107·0	101·6	2·62
1874	79	2473	2014	4487	106·7	102·9	2·66
1875	83	2758	2174	4932	113·6	108·5	2·68
1876	83	2569	2044	4613	106·0	100·8	2·71
1877	83	2663	2003	4666	103·1	99·0	2·76
1878	83	2700	2055	4755	104·3	100·0	2·78

* The proportions in these columns are extracted from the Thirty-third Annual Report of the Commissioners in Lunacy, pp. 24-5 and p. 11.

The Commissioners in Lunacy report that the mortality (deaths to 1000 average daily number of residents) among lunatics, in 1878, in county and borough asylums was 104·3. Amongst patients of all asylums, including those in private and idiot asylums, the rate of mortality was 100·0 per 1000.

The reports of the Commissioners show an increase in the number of the insane every year, and an increase also in the proportional number of lunatics to the population.

Period of five Years.		Proportion of Lunatics in all Asylums to 1000 Population.	
In the five years	1859-63	-	2·03
"	" 1864-68	-	2·28
"	" 1869-73	-	2·53
"	" 1874-78	-	2·72

Thus the average proportion has increased from 2·03 in 1859-63 to 2·72 in 1874-8.

This increase is no doubt partly due to wider recognition of the advantages of asylums, and to a diminished rate of mortality among the insane owing to more skilful treatment.

Deaths in Public Institutions in London.—A reprint of the table published in the Annual Summary for London, 1878, showing the number of deaths registered in *all* public institutions of London, is appended to this Report.* In the fifty-two weeks of that year 15,502 deaths were registered in 157 public institutions. Of every 1000 of these deaths, 620 occurred in workhouses, 3 occurred in prisons, 5 in military asylums, 294 in general hospitals, 34 in hospitals for special diseases, 2 in lying-in hospitals, 12 in military and naval hospitals, 9 in hospitals for foreigners, and 21 in lunatic asylums.

PROGRESS OF REGISTRATION.

Names on the Registers, and Searches.—The names of 1,811,886 persons, whose marriages, births, or deaths were recorded in the registers during the year 1878 have been added to the printed alphabetical indexes of this office.

The indexes now comprehend an aggregate number of names amounting to 59,469,635, and extend over a period of $41\frac{1}{2}$ years, viz., from the middle of 1837 to the 31st December 1878.

Table XXXII. exhibits the increase in the annual number of searches, but the figures are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

TABLE XXXII.—TOTAL AND AVERAGE ANNUAL NUMBER OF SEARCHES, 1845-78.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845-9 -	4,758	952	In the year 1845 -	8.5
„ 1850-4 -	8,344	1,669	„ 1850 -	8.2
„ 1855-9 -	17,425	3,485	„ 1855 -	11.5
„ 1860-4 -	35,127	7,025	„ 1860 -	19.6
„ 1865-9 -	56,544	11,309	„ 1865 -	24.8
„ 1870-4 -	91,458	18,292	„ 1870 -	34.4
In the year 1875 -	25,407	25,407	„ 1875 -	47.8
„ 1876 -	26,762	26,762	„ 1876 -	48.7
„ 1877 -	27,030	27,030	„ 1877 -	47.6
„ 1878 -	27,776	27,776	„ 1878 -	47.4

The provisions of the Registration Act are becoming more generally known by the legal profession; and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. Numerous applications for birth certificates are made by candidates for civil service clerkships and by those seeking employment in connection with the post office; the certificates are also largely required for life insurance purposes.

The greatest number of registration certificates issued is of those relating to births, and the number issued of marriages is considerably less than the number issued either of births or deaths.

* See Preliminary Table, No. 41.

The total number of searches in 1878 (including those relating to the non-parochial and other records) was 28,540, and the number of certificates issued was 22,903.

The amount received as fees for searches and certificates in the year 1878, and paid into Her Majesty's Exchequer, was 4313*l.* 8*s.* 6*d.*

For a list of the various public registers and records at this Office, see the 34th Annual Report, pp. xxi-ii.

UNITED KINGDOM.

The estimated population of the United Kingdom at the middle of the year 1878 amounted to 33,799,386, of whom 24,854,397 inhabited England and Wales, 3,593,929 inhabited Scotland, and 5,351,060 inhabited Ireland.

The number of emigrants, natives of Ireland, who left Irish ports in 1878 was 41,124, showing an increase of 2,621 compared with that in 1877. In Table XXXIII. it will be noticed that emigrants from Ireland since 1865 have been comparatively few; during the ten years 1866-75, they averaged 74,667, and in the three years 1876-8 only 39,071.

TABLE XXXIII.—NUMBER OF NATIVE EMIGRANTS from IRELAND in each Year from 1851 to 1878.

Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.
1851*	152,060	1856	90,781	1861	64,292	1866	99,467	1871	71,240	1876	37,587
1852	190,322	1857	95,081	1862	70,117	1867	80,624	1872	78,102	1877	38,503
1853	173,148	1858	64,337	1863	117,229	1868	61,018	1873	90,149	1878	41,124
1854	140,555	1859	80,599	1864	114,169	1869	66,568	1874	73,184	Total 1851-78	2,494,605
1855	91,914	1860	84,621	1865	101,497	1870	74,855	1875	51,462		

* From the 1st of May, the date at which the collection of these returns commenced.

In the year 1878 the marriage-rate of the United Kingdom (persons married to 1000 of population) was 14·2, the birth-rate was 34·1, and the death-rate was 21·2.

The marriage, birth, and death-rates for England and Wales in 1878—15·3, 35·9, and 21·7 respectively,—have already been noticed.

The marriage-rate of Scotland (13·5) was much below that of England (15·3). The Registrar General of Scotland in his 21st Annual Report states that "no doubt the laws which regulate registration of marriage are not the same in Scotland as in England; but their stringency is certainly not less rigid on this side of the Tweed, where there is reason to believe that a marriage hardly ever escapes registration." In the year 1878 the marriage rates in London and Edinburgh were 18·8 and 18·4 respectively. The Scottish birth and death-rates, 35·3 and 21·4 respectively, were somewhat below the English rates.

In consequence of defective registration the marriage and death rates for Ireland (9·5 and 18·6) differ considerably from those for England. The birth-rate (25·1) is depressed by the emigration of women at the child-bearing ages, and is therefore not altogether due to defective registration.

MORTALITY OF THE ARMY.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers of officers and men who died in Great Britain, Ireland, and abroad.

The average strength of the Army *at home and abroad* in the year 1878 was 200,758, and the number of deaths was 2249; so the rate of mortality was 11·2 per 1000 of strength, or 1·7 per 1000 above the rate in the preceding year.

The average strength of the Army *at home* was 109,201, and the deaths were 778: the rate of mortality per 1000 strength was 7·6 among officers, and 7·1 among non-commissioned officers and men, the average annual rates in the 17 years 1861–77 being 10·1 and 10·9 respectively; so the mortality of the British Army at home in 1878 was below that of the previous year, and much below the average.

TABLE XXXIV.—ANNUAL RATE OF MORTALITY per 1000 among OFFICERS and NON-COMMISSIONED OFFICERS and MEN in the ARMY AT HOME and ABROAD, 1861–78.

YEARS.	AT HOME.		ABROAD.	
	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.
Annually in the 17 years } 1861–77	10·1	10·9	13·8	17·4
In the year 1878 . . .	7·6	7·1	12·3	16·2
Decrease in 1878 . . .	2·5	3·8	1·5	1·2

The average strength of the Army *abroad* was 91,557, and the deaths were 1471. The rate of mortality per 1000 of strength was 12·3 among officers, and 16·2 among non-commissioned officers and men, against average annual rates in the 17 years 1861–77 of 13·8 and 17·4 respectively. The mortality, therefore, among officers serving abroad in 1878 was 1·5 per 1000 below the average, while that of non-commissioned officers and men serving abroad was 1·2 per 1000 below the average.

In the year 1878, 40 per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 12 per cent. in Ireland, and 46 per cent. abroad.

MORTALITY OF THE NAVY.

Mr. J. N. Dick, Fleet Surgeon, R.N., reporting to Sir A. Armstrong, M.D., K.C.B., F.R.S., the Director-General of the Medical Department, shows that the sanitary condition of the Royal Navy in the year 1878 continued to be satisfactory. The total force in the service afloat was 46,400; the number of deaths from disease was 247, and the death-rate was 5·3, against 5·0 in the previous year.

Compared with the mortality in 1877 there was a great excess in the death-rate from violence. The total number of deaths from this cause was 422, which gives a ratio of 9·1 per 1000, showing an increase of 7·0 per 1000 on the death-rate of 1877. Of the 422 deaths by violence 311 were attributable to the loss of Her Majesty's ship "Eurydice;" deducting these, the normal death-rate in 1878 from violence will be 2·4.

Compared with the average of the previous 15 years, there was an increase in the total death-rate of 3·7 per 1000 force, but in the cases placed on the sick list there was a decrease of 51·0 per 1000. In the ratio of invaliding there was an increase of 1·3 per 1000.

TABLE XXXV.—MORTALITY in the ROYAL NAVY at the different STATIONS during the Years 1876-78, and in the previous Fifteen Years.

STATIONS.	DEATHS per 1000 Force.									
	From Disease.			From Wounds, Injuries, and Drowning.			Total from All Causes.			Total from All Causes annually in 15 Years.

* Including 311 deaths by the loss of Her Majesty's ship "Eurydice."

† Including 35 deaths from a boiler explosion in Her Majesty's ship "Thunderer."

‡ Including the deaths by the loss of Her Majesty's ship "Captain."

§ Including the deaths by the loss of Her Majesty's ship "Bombay."

Of the 247 deaths from disease, 16 were referred to enteric fever, 14 to remittent fever, 3 to cholera, 54 to consumption, 3 to apoplexy, 23 to heart diseases, 10 to aneurism, 31 to pneumonia, 7 to dysentery, 4 to diarrhoea, 19 to various diseases of the digestive organs, 7 to kidney diseases, and 2 to delirium tremens. Of the 422 deaths from violence, 28 were caused by wounds and injuries, 2 by burns and scalds, 391 by drowning, and 1 by suicide.

The death-rate from all causes per 1000 force in 1878, was 15.8 at ages 15-25, 11.8 at ages 25-35, 14.4 at ages 35-45, and 15.7 at ages 45 and upwards.

The mean force employed on the home station was 19,000, and the deaths were 137, being in the proportion of 7.2 per 1000, against 6.2 in the previous year. The mortality from disease on this station was 5.2 per 1000 force, from violence 2.0 per 1000; against 4.7 and 1.5 in the previous year.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Act 37 and 38 Vict. c. 88., commanding officers of British ships not in Her Majesty's service, and commanding officers of foreign vessels trading to or from any port of the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me; and commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships, are entered in a book, kept for the purpose at this Office, called the Marine Register Book. The numbers recorded in the year 1878 were 356 births and 4058 deaths.

291 births of children and 613 deaths occurred among *passengers* on board merchant vessels at sea.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of mariners at sea in registered vessels, in the year 1878 was 197,587. The deaths from all causes (excluding the deaths of masters but including some of those which occurred on board colonial and fishing vessels) were 3872, and the rate of mortality was 19·8 per 1000 of strength. The average annual mortality in the 27 years 1852–78 was 21·4 per 1000.

In the subjoined table the mortality in the merchant service by drowning is compared with the mortality in the Royal Navy from the same cause.

TABLE XXXVI.—DEATHS BY DROWNING in the MERCHANT SERVICE and in the ROYAL NAVY in the Thirteen Years 1866–78.

YEARS.	MERCHANT SERVICE.							ROYAL NAVY.		
	Strength.	Deaths by Drowning.*			Mortality per 1000 Strength.			Strength.	Deaths by Drowning.	Mortality per 1000 Strength.
		By Wreck.	By Accident.	Total.	By Wreck.	By Accident.	Total.

1875	199,067	1525	987	2512	7·6	5·0	12·6	44,360	41	0·9
1876	198,638	1237	1033	2270	6·2	5·2	11·4	45,010	53	1·2
1877	196,562	1461	1077	2538	7·4	5·5	12·9	44,940	42	0·9
Average in the 12 Years 1866–77	198,820	1607	1054	2661	8·1	5·3	13·4	47,150	104	2·2
1878	195,585	1164	922	2086	6·0	4·7	10·7	46,400	391‡	8·4

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those "reported" in each year.

† Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

‡ Including 311 deaths by the loss of Her Majesty's ship "Eurydice."

Thus the total number of mariners drowned in 1878 was 2086 or 10·7 per 1000 strength, viz., 6·0 by wreck, and 4·7 by accident. The average annual rate in the 12 years 1866–77 was 13·4, viz., 8·1 by wreck, and 5·3 by accident.

The number of deaths by drowning in the Royal Navy in the year 1878 was 391 out of a total strength of 46,400, and the death-rate from this cause was 8·4 per 1000; but this exceptionally high rate was owing to the loss of Her Majesty's ship "Eurydice"; the average annual rate in the 12 years 1866–77 was 2·2 per 1000, and in the year 1877 the rate was no higher than 0·9 per 1000.

WILLS.†

The number of probates and administrations granted at the Principal Registry during the year ending 31st October 1878 was 17,531. The value of the effects was sworn under 68,998,655*l*.

The number of probates and letters of administration granted in the 40 district registries during the year was 27,546. The value of the property under which these probates and administrations were sworn was 50,914,890*l*.

The results for the Principal and District Registries combined were—probates and administrations 45,077—value of effects sworn under 119,913,545*l*. The average value of each was 2660*l*. against 2811*l*. in the previous year. The proportion of people dying above the age of 21 who left wills, or left estates on which letters of administration were taken, was 16·6 per cent., or about 1 in 6.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this Office.

EUROPEAN STATES.

Vital statistics are now published for twelve of the chief States of Europe, arranged in conformity with the order determined by a resolution of the Statistical Congress held at St. Petersburg in 1872. Switzerland has been recently added to the series.

In Table XXXVII. the marriage, birth, and death rates in the several European States during the year 1878 are compared with the average rates in previous years. Detailed returns relating to these countries will be found in a series of tables on pp. cxxi-cxxvii.

* The mean annual rates for Spain are for the ten years 1861-70, those for Italy are for the ten years 1863-72.

† See Judicial Statistics, England and Wales, 1878, Part II., pp. 18, 19.

Marriage-rate.—The most remarkable feature in these returns, in 1878, is the depression in the marriage-rate; in each State it was below the average of the preceding five years 1873-7.

The rate was most depressed in the German Empire, the reduction there being as great as 15 per cent. In Austria, Denmark, and Italy the falling off amounted to 11 per cent., in Switzerland to 10 per cent., in Sweden and England to 9 per cent., in Belgium to 8 per cent., and in France and the Netherlands to 7 per cent.

Birth-rate.—The reduction in the birth-rate in 1878, compared with that in the five years 1873-7, was greatest in Sweden, 3.9 per cent. In the German Empire it fell 3.7 per cent., in Belgium 3.4, in France 3.1, in Austria 3.0, in Italy 2.7, in Switzerland 2.5, and in the Netherlands 1.4 per cent. In England the birth-rate in 1878 was almost the same as the average, and in Denmark it was slightly in excess.

The birth-rate is lower in France than in any other European State. In the year 1872 it had risen to 26.8, but this was unusually high, and after being slightly above 26 in intervening years, it fell in 1877 to 25.5, and in 1878 to 25.2. Although no general decrease is observed in the marriage-rate of France, the birth-rate has, for many years, with more or less fluctuation, gradually decreased, as will be seen by the subjoined statement, and in the eight years 1871-8 with a higher marriage-rate, it was as low as 25.6.

	Persons married to 1000 Persons living.*	Births to 1000 Persons living.*
In the ten years 1801-10	- 15.6	- 32.9
" " 1811-20	- 15.8	- 31.8
" " 1821-30	- 15.5	- 30.6
" " 1831-40	- 15.9	- 28.8
" " 1841-50	- 15.9	- 27.3
" " 1851-60	- 15.9	- 26.3
" " 1861-70	- 15.6	- 26.3
In the eight years 1871-78	- 16.3	- 25.6

The low birth-rate in France cannot be attributed to a small proportional number of women at the child-bearing ages, for the proportion is higher in France than in any other country of Europe; indeed it is generally recognised to be chiefly though indirectly due to the sub-division of land among the peasant proprietors. The better class of the labouring population aspire to become proprietors of small holdings: by thrift and industry they accumulate capital for this purpose, and avoid, by their social philosophy, the division of their property amongst a large family at their decease.

The recent census of France supplies the means for obtaining the proportional number of births to the married women at the child-bearing ages in the different departments, and some results have been deduced from the legitimate births in the three years 1875-7, and from the enumeration of the married women, aged 15 and under 45 years in 1876.

They show the influence which the division of the land exerts on the birth-rate, and therefore on the general prosperity of the community. The departments were arranged in the order of the proportional number of "*Cotes Foncières*"† to population in 1878.

* For the first five decennials the rates are taken from "*Annales de Démographie Internationale*," 1877, by Dr. Chervin; for the later periods from French official publications.

† The number of "*Cotes Foncières*" in each department has been taken to represent, approximately, and for purposes of comparison only, the number of land holdings; they unfortunately include, however, "*propriétés bâties*" and "*propriétés non bâties*."

It will be observed in the subjoined table of groups of departments that the proportional number of births is as a rule lowest in the groups having numerous small holdings, while those with fewer and probably larger holdings have a higher proportional number of births.

TABLE XXXVIII.

GROUPS OF DEPARTMENTS.	Number of	
	<i>Cotes Foncières</i> to 1000 Population in the Year 1878.	Legitimate Births to 1000 married Women aged 15-45 in the Three Years 1875-77.
FRANCE - - -	385	196
17 departments with the greatest proportional number of <i>Cotes Foncières</i> - - - }	600	162
42 departments with an intermediate proportional number of <i>Cotes Foncières</i> - - - }	448	197
23 departments with the smallest proportional number of <i>Cotes Foncières</i> - - - }	299	221

NOTE.—The Groups exclude the following departments, containing some of the large towns where exceptional circumstances exist :—Seine Inferieure, Landes, Rhône, Finistère, and Seine.

Table XXXIX. exhibits the proportional number of legitimate births to married women and of *Cotes Foncières* to population in each of 12 departments, viz., 6 departments where the proportion of births was lowest and 6 departments where it was highest; the relation between the birth-rate and the division of the land, as indicated in the previous table, is generally maintained. The last column of the table shows the prejudicial effect of the low birth-rate on the numbers of the population.

TABLE XXXIX.

DEPARTMENTS.	Number of		Increase or Decrease per cent. of the Civil Population, 1872 to 1876.
	Legitimate Births to 1000 married Women aged 15-45 in the Three Years 1875-77.	<i>Cotes Foncières</i> to 1000 Population in the Year 1878.	
Six Departments with the lowest Proportions of Births.			
Lot et Garonne - - -	120	484	- .71
Gironde (including Bordeaux) -	129	343	+ 4.25
Eure - - -	181	537	- 1.26
Gers - - -	133	506	- .52
Aube - - -	133	770	- 1.57

Ardèche - - -	297	368	+ 1.20
Côtes du Nord - - -	288	312	+ 1.08

Arranging the departments according to the proportional number of "*Exploitations*" to the active population engaged in agriculture, results are obtained confirmatory of those derived from the "*Cotes Foncières*."

TABLE XL.

GROUPS OF DEPARTMENTS.	Number of	
	<i>Propriétés rurales</i> to 1000 active Agricultural Population.*	Legitimate Births to 1000 married Women aged 15-45 in the Three Years 1875-77.
FRANCE - - - -	599	196
21 departments with the greatest proportional number of <i>Propriétés rurales</i> - - - - }	870	180
28 departments with an intermediate number of <i>Propriétés rurales</i> - - - - }	664	195
37 departments with the smallest number of <i>Propriétés rurales</i> - - - - }	457	213

NOTE.—The Groups exclude the department of the Seine.

* The term "active Agricultural Population" includes, according to the census of France in 1876, only those persons directly employed in agriculture as masters or labourers; members of their families and domestic servants not engaged in agriculture are excluded.

Death-rate.—In each of the foreign states the mortality was either about or below the average of the preceding five years. The death-rate per 1000 of population in 1878 was highest in Austria 31·1, in Italy it was 28·8, in the German Empire 26·2, Switzerland 23·4, the Netherlands 22·8, France 22·6, England 21·7, Belgium 21·5, and in Denmark and Sweden as low as 18·5 and 18·0 respectively.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

Registrar-General.

REMARKS ON THE METEOROLOGY OF 1878.

By JAMES GLAISHER, Esq., F.R.S., &c.

THE following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer were alternately above and below their averages from the 1st to the 8th of January, they were above from the 9th till the 22nd; and then again alternately above and below to the end of the month; from the 1st to the 9th of February they were considerably above their averages, the mean amount of excess being 0.56 inch; on the 10th the reading was that of its average; on the 11th and 12th the mean values were slightly above, and on the 13th and 14th a little below; from the 15th to the 26th they were all above; from the 27th of February till the 10th of March the readings were alternately above and below their averages; from the 11th to the 21st they were all above, and from the 22nd of March till the 5th of April they were all below, excepting on one day, viz., March 26th, when the value was 0.11 inch above. The pressure from April 6th to the 15th was in excess of the average; from the 16th to the 25th it was in defect; a period of readings alternately above and below their averages set in on the 26th, and lasted till the 5th of May; from the 6th to the 20th (with the exception of the 17th) the pressure was in defect of the average; on the two following days it was in excess; and from the 23rd to the 28th it was again in defect. The mean daily readings were above their averages from the 29th of May till 2nd of June, they were slightly below on the 3rd and 4th, and a little above on the 5th, 6th, and 7th, below from the 8th to the 18th, above from the 19th to the 27th, below from the 28th till 3rd of July; they were then 0.08 inch too high till the 9th, and a little below on the four following days; from July 14th till the 23rd they were 0.19 inch too high; the next four days were 0.15 inch too low; from July 28th till August 2nd the pressure was in excess, and averaged 0.20 inch daily; from August 3rd till the end of the month the readings (with the exception of the 8th, 9th, 18th, and 21st, which were slightly in excess of their averages) were low; and particularly so on the 14th, 16th, 23rd, 24th, 25th, 26th, 29th, and 30th, on which days the values were nearly half an inch below their averages, the average deficiency of pressure from August 3rd to 31st was 0.24 inch. From September 1st to 14th the atmospheric pressure was 0.07 inch too high; from the 15th to the 24th (with the exception of the 20th) the pressure was low, the average deficiency for this period was 0.15 inch, and from the 25th till the end of the month the mean daily excess of pressure was 0.15 inch. For the first five days of October the pressure was 0.30 inch in excess of the average; from the 6th to the 10th it was 0.32 inch in defect; from the 11th to the 17th 0.23 inch in excess; from the 18th October till the 17th of November the pressure was below the average (except on four days, viz., November 1st, 2nd, 3rd, and 9th), the mean amount of daily defect for the 31 days ending November 17th was 0.32 inch. From the 18th till the 23rd of November the pressure was 0.29 inch too high; from the 24th till the 28th it was on the average 0.40 inch too low; from the 28th of November till the 6th of December (with the exception of December 1st) the pressure was in excess of the average, the mean amount for this period being 0.10 inch, and from the 7th of December till the end of the year the pressure was on the average 0.37 inch in defect.

The highest reading of the barometer in the year at the height of 160 feet above the level of the sea was 30·507 inches on January 12th, and the lowest was 28·857 inches on October 26th; the yearly range was 1·650 inches.

Temperature.—The month of January was unusually mild, and the sky was generally overcast till the 24th day, with the exception of the 10th, 11th, 12th, and 13th; the temperature was above its average on every day, and on the 14th, 15th, 21st, and 22nd, to a very large amount; the temperatures on the 21st and 22nd, both day and night, were extremely high, and the excess of daily temperature from January 1st to the 24th was 5°·1. On the 25th a cold period set in (snow falling generally) and continued till February 12th; the average deficiency of temperature for these 19 days was 2°·6 daily. On February 13th a very warm period began, and on the 17th there was a remarkably high day temperature everywhere; this very warm period continued till March 13th (the first day of March being distinguished for high temperature), and for the 28 days ending March 13th; the daily excess of temperature was on the average as large as 7°; then there occurred five days of low temperature, the daily deficiency averaging 4½°, then four days (March 18th–22nd) of warmth followed, the excess of temperature being 6¼°. Up to this time the weather since the beginning of the year had been exceedingly mild, but on March 23rd, bad weather set in with severity, and lasted generally till April 11th; several severe frosts were experienced during the first week of April. On the 12th the weather became warm, and from this day till May 19th, the mean temperature of every day was above its average; the mean excess of these 39 days was nearly 5°; on some of these days the excess of temperature was as large as 7° or 8°. On May 20th the weather again set in cold, and on nearly every day the mean temperature was below its average till June 19th; the average deficiency of these 31 days was 2½° daily; from June 20th to the end of the month the temperature was in excess of its average, particularly from the 23rd to the 29th, when the weather was hot; the temperature at some places reached 90° or higher; the average daily excess of temperature for these 11 days was 7°. The weather at the beginning of July was cold; it somewhat moderated from the 5th to the 8th, but cool and cloudy weather was experienced till the 15th, and the average daily deficiency of temperature for the first 15 days of July was 1°. On the 16th the weather underwent a favourable change to higher temperature, and bright sunshine. The hottest day in the month was the 19th, on which day the maximum temperature was nearly 90° at many places, and at Leeds it even reached 92°; this warm weather continued till the 24th; the average excess of temperature was 7¼° daily; from the 25th the weather was cool and changeable till August 3rd; the average deficiency was 1° for these 10 days. From the 4th to the 11th the daily excess of mean temperature was 3°·6, from the 12th to the 21st the temperature was nearly that of its average; on the 22nd a warm period began, and lasted till September 11th, the average excess for these 21 days was 1°·9; from the 12th till the end of the month the weather was mostly cold, and the average deficiency was 2°·1. Till the 21st of October the weather was generally fine and warm, the average daily excess of mean temperature was 3½° nearly; from the 22nd day the weather became cold, and the sky cloudy; this unpleasant weather continued throughout November, and during the first few days of December. On the 6th of December the cold increased in intensity, severe frosts set in, and very low temperatures continued till the evening of Christmas Day (25th); the average deficiency of daily temperature for the 65 days ending December 25th was 5°·6; between December 6th and 25th the mean temperature was more than 12° below the average on several days; and on the 24th it was as large

17 $\frac{1}{2}$ ° below; the average deficiency of mean temperature for the 20 days ending December 25th was 10°·8. On December 26th the weather suddenly changed and became warm; the mean temperature of both December 30th and 31st was about 14° above the average, being 31° to 32° higher than it was six days previously, viz., on December 24th.

The highest temperatures of the air in the year were 94°·6 at Silloth, 93° at Llandudno, and 92° at Leeds, and the lowest were 5° at Carlisle, 5°·2 at Nottingham, 5°·6 at Oxford, and 5°·7 at Holkham.

Rain-fall.—The falls of rain were below their averages in January, February, and March; the total fall in these three months was 3·1 inches being 2·0 inches below the average. The total fall in April was 4·3 inches, being 2·6 inches above the average; on the 10th and 11th of April it fell very heavily at many places; at Caterham the fall in the two days was 1·6 inches, at Croydon 2·2 inches, at Blackheath (London) 2 inches nearly, at Greenwich Observatory 2·8 inches; and in the north of London the fall was the heaviest, at Camden Square the fall was 3·23 inches, and at Muswell Hill 2·8 inches. This unusual fall of rain caused very heavy floods in low lying places south of the Thames, and particularly at Lee and Lewisham. The fall of rain in May was 4·3 inches, being 2·3 inches above the average, it fell on nearly every day from the 6th, there were many heavy falls between the 6th and 11th of May; the heaviest of these was at Bath, 2·0 inches on the 10th, causing serious floods in that City; on the 11th 1·8 inch fell at Gloucester, and moderately heavy falls occurred in Cornwall and Devon. At Greenwich on the 7th of May the fall was 1·6 inch, of which one inch fell between 6h. p.m., and 6h. 50m. p.m. The total fall in June was 4·6 inches, being 2·7 inches above the average. The total fall in the three months ending June 30th was 13·2 inches, being no less than 7·6 inches above the average; the number of days on which rain fell in this period was 51, exceeding the average by 19 days. The fall of rain in July was 0·3 inch only, being 2·3 inches below the average, and in the preceding 63 years there are but three instances of so small a fall in July, viz. :—In 1825 it was 0·1 inch, in 1835 it was 0·3 inch, and in 1864 it was 0·3 inch, so that really there is but one instance in that period of a *smaller* fall. The fall in August was large, being 5·4 inches, or 3·0 inches above the average, and larger than any fall in the month of August back to 1815, the nearest approach being in 1837, when the fall was 4·6 inches. The fall in September was 0·8 inch, being 1·6 inch below the average. The fall in October was 1·7 inch, or 1·1 inch below the average, in November it was 3·5 inches, being 1·1 inch above the average, and in December it was 1·2 inch, being 0·9 inch below the average. The total fall of rain in the year was 29·2 inches, being 3·8 inches above the average, and the number of days on which it fell was 166, exceeding the average by 31 days.

The heaviest falls of rain in the year were at Allenheads 47·72 inches, Stonyhurst 45·10 inches, and Truro 45·04 inches. The least falls were at Bournemouth 22·49 inches, Royston 23·36 inches, and Strathfield Turgiss 23·97 inches. The greatest number of rainy days in the year were 226 at Nottingham, 224 at Kelstern Grange, and 216 at Stonyhurst, and the least number were 150 at Osborne, 153 at Strathfield Turgiss, and 155 at Bournemouth.

Thunderstorms occurred on 90 different days during the year. The greatest number of days in any month was 18 in May; and the least, one day in both January and March. In February *no* thunderstorms were reported.

Thunder was heard, but lightning was not seen, on 81 days during the year, which were distributed as follows :—January 3, February and March

both one, April and November both 3, May 17, June 13, July and September both 7, August 16, and October 2.

Lightning was seen, but *thunder* was not heard, on 73 days in the year, 27 of which were in the last three months of the year. The number in 1877 at the same stations was 51 days.

Solar Halos were seen on 63 days in the year, and the number of days in each month was pretty equally distributed.

Lunar Halos were seen on 4 nights in January, 7 in February, 4 in March, 5 in April, 2 in May, 3 in June (in July no Lunar Halos were reported), 2 in August, 4 in September, 9 in October, 3 in November, and 8 in December, or on 56 nights during the year.

Aurora Boreales were seen, on 25th of March at Carlisle, and on the 3rd of April at Torquay.

Snow fell on 85 days during the year (being 14 days more than in 1876 at the same stations), 47 of which were in November and December; in December snow fell at one or other places on 27 days. Snow fell as late as the 21st of May at Halifax, and as early as the 29th of October at several places.

Hail fell on no less than 108 different days during the year. The greatest number of days in any month was 21 in December, and the least one day in both July and August. The number in 1877 at the same places was 109 days, or one day more.

Fog prevailed on 187 days in the year, which were distributed as follows:—January 17, February 21, March 4, April 17, May 7, June 9, July 14, August 14, September 18, October 20, November 17, and December 29. Fog prevailed at one or other place on the first 29 days of December, which is somewhat remarkable.

The number of days in 1877 that fog prevailed at the same places was 149.

PRELIMINARY TABLES.
(1878.)

TABLE 1.—Estimated Population, and Number of Marriages, Births, and Deaths registered in England, in each of the Forty-one Years 1838-78.

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,339	118,067	236,134	463,787	342,780	121,027

1878	23,947,245	190,054	380,108	891,294	529,872	361,422

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841-51-61-71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, see Table 70.

TABLE 2.—Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England, in each of the Forty-one Years 1838-78.

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING

Mean in 41 years	16.3	34.1	22.2	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated

TABLE 3.—Proportions of Persons Married, of Births and of Deaths to 1000 of the Population of England, during the Forty-one Years 1838-78.

YEARS.	To 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING.		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.
MEAN OF 41 YEARS.

1878 -	39,137	48,584	46,628	55,705	12·8	15·7	14·9	17·8
Mean Annual Rate per 1000 in each quarter during the 41 years					13·7	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may be thus read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 3.—Marriages in England. The Proportion per Cent. of Minors of each Sex, of Males and Females who signed the Marriage Register with Marks, and of Persons who were Widowers or Widows, in each of the Thirty-eight Years 1841-78.

1878	236,792	224,680	222,004	219,590	36·0	36·9	35·5	35·1
Mean Annual Rate per 1000 in each Quarter during the 41 years					35·7	35·3	32·9	32·8

NOTE. The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, 30,000 persons living 305 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, see note to Table 1.

TABLE 12.—Proportional Number of Births in England in each Quarter to 1000 Births in the Average Quarter* of each of the Forty-one Years 1838-78.

YEARS.	NUMBER OF BIRTHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF BIRTHS.				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

Mean Annual Rate per 1000 in the four Quarters of the 41 years					24.4	21.9	20.5	21.8

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1864, in 10,000 of the population 24 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, see note to Table 7.

TABLE 22.—Proportional Number of Deaths in England in each Quarter to 1000 Deaths in the Average Quarter* of each of the Forty-one Years 1838-78.

YEARS.	NUMBER OF DEATHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF DEATHS				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

Note.—The Table may thus be read:—Of each 1000 male children living under five years of age, 71·9 died in each of the 41 years 1838-78; in the five years 1841-45 this proportion averaged 68·8 per 1000; and in the five years 1871-75 it was 70·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 50 years 1841-71 (see Table 70), distributed in the several groups of ages according to the proportions found to prevail at the last four Censuses.

Note.—The Table may thus be read:—Of each 1000 female children living under five years of age, 62.0 died in each of the 41 years 1838-78; in the five years 1841-45 this proportion averaged 58.6 per 1000; and in the five years 1871-75 it was 60.2.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (see Table 70), distributed in the several groups of ages according to the proportions found to prevail at the last of our Centuries.

Table 28.—ENGLAND.—Annual Rate of Mortality per 1000 of Females living at Twelve groups of Ages in each of the Forty-one Years 1838-78.*

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrar's Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Annual Returns.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the Table 39 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not so extensive throughout the seven years.
† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County and Lunatic Asylums, situate within the District or Sub-district here taken as representing the town, or by the exclusion of all reports of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the situation outside that area.

TABLE 39.—Population, Births and Deaths, and Rates of Mortality during 1878 in Fifty large Town Districts.

TOWNS.	ESTIMATED POPULATION in the middle of the Year 1878.	REGISTERED during the Year 1878.		ANNUAL RATE to 1000 living during the Year 1878.			DEATHS under One Year to 1000 Births registered.	DISTRICTS and SUB-DISTRICTS, taken as approximately representing the several Towns.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D., signifies Improvement District.

* For method of framing these estimates see note * to Table 4. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the recent population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the

* The figures in this column, excepting those for Nottingham, Sa'ford, Oldham, and Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1878 by the addition of $\frac{7}{11}$ times the annual rate of increase which prevailed between 1861 and 1871. The rate of increase of population in Nottingham, Sa'ford, and Oldham having since 1871 exceeded that which prevailed during the ten years 1861-71, revised estimates have been adopted for those three boroughs, based upon special returns of inhabited houses now existing within those boroughs. The population of Dublin is taken as stationary at the number enumerated in April 1871.

Average Number living to One Annual Death in 39 years	42	43	41	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The rates are calculated upon the deaths registered during each natural year from 1st January to 31st December. Hampstead and Lewisham did not form part of Registration London prior to 1847. Certain alterations affecting the West and Central groups of districts were made in the year 1866, but no corrections have been made in the results given in this Table for any year prior to 1861.

* In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE 45.—Births and Deaths in 1878 in 30 Foreign Cities.

CITIES.	AREA in Square Kilometers.	POPULATION (enumerated or estimated).	BIRTHS. Exclusive of Stillborn.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.

NOTE.—The numbers for 1837 were registered in the half-year ending 31st December.

TABLE 52.—Area, estimated Population, and Marriages, Births, and Deaths registered in the United Kingdom, in the Year 1878.

	AREA IN ACRES.	AREA IN HECTARES.	Estimated POPULATION in the middle of the Year 1878.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM	77,635,801	81,418,757	33,790,366	230,671	479,843	1,182,780	716,876
Great Britain - -	56,815,354	22,991,538	28,448,236	214,887	428,774	1,018,618	616,647
England and Wales -	37,319,221	15,102,008	24,854,397	190,054	380,106	891,806	539,873
Scotland - - -	19,496,133	7,889,530	3,593,839	24,833	48,668	126,707	76,775
Ireland * - - -	20,819,927	8,425,239	5,351,080	25,284	50,508	134,117	99,239

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE 53.—Proportion per 1000 of Marriages, Births, and Deaths to the Population of the United Kingdom, in the Year 1878.

	ACRES TO A PERSON.	HECTARES TO A PERSON.	TO 1000 PERSONS LIVING.			
			MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM - -	2'30	'98	7'09	14'2	34'1	21'2
Great Britain - - -	2'00	'81	7'54	15'1	35'8	21'7
England and Wales - -	1'50	'61	7'65	15'3	35'9	21'7
Scotland - - - - -	5'42	2'20	6'77	13'5	35'3	21'4
Ireland - - - - -	3'89	1'67	4'73	9'5	25'1	18'6

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

Average annual emigration from the United Kingdom					
From 1815 to 1878					135,822
For the 10 years 1869-78					219,301

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815-24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

NOTE.—The number of Deaths in the cols. 3 to 6 are estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in Table 64; previously to 1861 the proportions used are those existing in 1851, the proportions which prevailed in 1861 being used from that year up to 1871, and the proportions which existed at the Census in 1871 for subsequent years.

TABLE 66.—Births and Deaths among Passengers, British Subjects, on board Merchant Vessels at Sea, including Soldiers, Marines, and Invalided Seamen from the Royal Navy, in each of the Twenty-three Years 1856-1878, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Shipping and Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.

(Furnished to the Registrar General by the Registrar General of Shipping and Seamen.)

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 68.—RETURN of the AGES, RATING, and CAUSES of DEATH of 3870 Seamen reported to the BOARD of TRADE in the Year 1878 as having died in the British Merchant Service. (Parliamentary Return, Session of 1878.)

TABLE 69.—Fluctuations in the Marriage Rate of England

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE.		AVERAGE PRICE OF WHEAT per Quarter in England
		Current Events and General State of the Country.	Result of the Harvest.*	
1839	15.9	Chartist riots. Chinese war - - - - -	Deficient - - -	70 5
1840	15.6	Penny postage came into operation. Canton blockaded - -	Do. - - -	65 4
1841	15.4	British expelled from Cabul. Revenue deficient - - -	Very deficient - -	64 4
1842	14.7	Turn-out of cotton spinners. Great general distress. Revenue deficient. Afghans defeated - - -	Above the average	57 5
1843	15.2	Continued depression in manufacturing industry. Reduced value of agricultural produce. Deficiency in revenue. Repeal agitation in Ireland. Rebecca riots in Wales - - - - -	Do. - - -	56 1
1844	16.0	After a long period of depression, the opening of the year found the country for the most part in a thriving condition, with an increasing revenue and a reviving trade	Very good - - -	51 5
1845	17.2	General prosperity of the country. Improvement in the revenue. Potato disease in England and Ireland. Short corn crops. Great increase of railway undertakings. Speculation mania, followed by commercial panic. Sikh war - - - - -	Deficient - - -	50 18
1846	17.2	Caffre war. Free Trade Bill passed. Corn Law repealed - - -	Do. - - -	54 8
1847	15.8	Commercial panic. £10,000,000 for Irish relief. Act relating to Free Trade came into operation. Owing to partial failure of crops the duty on corn was suspended till March 1848 - - - - -	Above the average	60 9
1848	15.9	Chartist riots. Sikh war. Agitation in Ireland. Revenue deficient - - - - -	Very bad - - -	50 6
1849	16.2	Cholera epidemic. Punjaub annexed. Duty on corn reduced to 1s. per quarter - - - - -	Above the average	44 3
1850	17.2	Improvement of trade and revenue. Diminution of pauperism. Depressed condition of the agricultural classes was the only exception to the general prosperity of the country. Caffre war ended - - - - -	Below the average	40 3
1851	17.2	Australian gold discovered. Great Exhibition opened - -	About the average	38 6
1852	17.5	Napoleon III. Emperor. Pegu annexed - - - - -	Below the average	40 10
1853	17.9	Rise in the price of provisions owing to the bad harvest, and to general prosperity especially of the labouring classes; the very poor, however, suffered great privations - - - - -	Bad - - -	52 11
1854	17.2	War declared against Russia - - - - -	Extremely good -	72 5
1855	16.2	Russian war continued - - - - -	Below the average	74 8
1856	16.7	Russian treaty. War with China and Persia. Revenue deficient - - - - -	About the average	68 2
1857	16.5	Indian revolt. Great commercial panic - - - - -	Above the average	56 5
1858	16.0	The commercial disturbance and distress of 1857 caused the revenue to fall short of the estimates during the greater part of the year, but towards its close there were indications of improvement. The cost of the necessaries of life was lower than in 1856 or 1857 - -	Do. - - -	44 3
1859	17.0	At the commencement of the year pauperism had decreased and a spirit of general contentment prevailed. Treaties of commerce were concluded between England and Russia, and also with Japan. War with China - - -	Under the average	43 10
1860	17.1	Commercial treaty with France. War in New Zealand. War with China; surrender of Peking. Neapolitan revolt. Annexation of Savoy and Nice to France - - -	Very deficient -	55 2
1861	16.8	Famine in N.W. provinces of India. Owners of cotton mills in Lancashire began to employ hands on short time. Revenue deficient. Disruption of United States - - -	Under the average	55 4
1862	16.1	Distress in cotton districts. Revenue deficient - - -	Much below the average - - -	55 8
1863	16.8	Continued distress in the cotton districts. Marriage of

TABLE 69. (continued).—FLUCTUATIONS in the MARRIAGE RATE of ENGLAND

YEARS.	MARRIAGE RATE IN ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE.		AVERAGE PRICE OF WHEAT per Quarter in England.
		Current Events and General State of the Country.	Result of the Harvest.	
1864	17.3	Duty on corn 3d. per cwt. War in New Zealand brought to a close	Good - - -	40 2
1865	17.5	Cattle plague. Fenian conspiracy in Ireland	Below the average	41 9
1866	17.5	Great monetary panic in London. Cholera epidemic	Very unfavourable	42 11
1867	16.5	General commercial depression, and distress occasioned by want of employment among the artisan class. Rise in the price of bread	Deficient - -	64 2
1868	16.1	Abyssinian war. Revenue deficient	Productive - -	63 9
1869	15.9	Woolwich dockyard closed. Duty on corn ceased. No healthy revival of trade since commercial crisis of 1866. Revenue deficient. Opening of Suez canal	Deficient - -	63 2
1870	16.1	Trade and commerce depressed. Franco-German war	Under the average	46 10
1871	16.7	Revival of industrial and commercial activity. Cattle disease. Rise in prices and in the wages of labour. Bank Holiday Act	Deficient - -	56 10
1872	17.5	The year commenced with every promise of commercial prosperity, and there was a great increase of railway traffic. Great rise in the prices of the common commodities of life, which pressed hardly upon the salaried middle classes. Payment by France to Germany of 220 million pounds sterling	Do. - -	57 1
1873	17.6	American railway panic. Reaction from the high prices and excited demands in 1871 and 1872. Trade continued moderately active	Much below the average - -	58 8
1874	17.1	Strikes and disputes between masters and men. Wages in mining, iron, and steel trades fell. Price of commodities and wages generally declined	Very good - -	53 9
1875	16.8	Iron, coal, hardware, and shipbuilding trades agitated by strikes. Repudiation by Turkey of part of its obligations. Fall in price of silver	Very unsatisfactory	45 2
1876	16.7	Reduced wages. Commercial failures	Unsatisfactory -	46 2
1877	15.8	Prevalence of strikes. The year was unfavourable for the farmer. Depression on the Continent and in United States. Political conflict in France. War between Russia and Turkey. Famine in Southern India	Do. - -	54 9
1878	15.2	War continued between Russia and Turkey. Treaty of Berlin in June. In September rupture between Indian Government and the Amir of Afghanistan. Prices of commodities, and wages, continued to decline. Prevalence of strikes, resulting generally in the defeat of the strikers. Bank failures. Failure of iron and coal industries. Trade and commerce depressed	Good - - -	46 5

NOTE.—By Act George IV. c. 60, a scale of duties was fixed, to be paid on wheat imported from a foreign country. duty was 2l. 8s. 8d., and as the average price per quarter increased the duty decreased, so that when the price reached 72s. By Act 9 & 10 Vict. c. 22 the duty was reduced to a uniform rate of 1s. per quarter, but (owing to the "partial failure" of the duty) it was further amended till 1st March 1848; by Act 12 & 13 Vict. c. 86 however the duty was to be paid "partial failure"

of the CAUSES which have contributed thereto, 1839-78.

fixed with the price of corn in the home market; thus, when the average price was 38s. and under 38s. per quarter the duty was only 1s. By Act 5 Vict. c. 14, popularly known as Sir Robert Peel's sliding scale, the duties were lessened (crops") by Act 10 & 11 Vict. c. 1 the duty on corn was suspended until 1st September 1847, and by Act 10 & 11 Vict. c. 64 of that Act, dated 1st August 1849. By Act 27 & 28 Vict. c. 18 a duty of 3d. per cwt. after 1st September 1864 was

1877	4,484,542	33,674	67,348	138,475	83,175†	13.7	30.9	18.5†
1878	4,531,863	29,151	58,302	134,464	81,418	12.9	29.7	18.0

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.
† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths, the highest number in any year since 1801. In 1877 scarlet fever caused 7426 deaths and diphtheria 3367 deaths.

TABLE 77.—AUSTRIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1853 to 1878.
(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 Venetia was included; since 1864, however, it has been excluded. The facts for Hungary and Transylvania for years subsequent to 1865 appear in Table 78.

* Census years.

† The excessive mortality in the year 1866 was due to cholera and the war.

‡ Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE 78.—HUNGARY AND TRANSYLVANIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1866 to 1878.

(Furnished by M. C. Keleti, Director of the Hungarian Statistical Department at Buda-Pesth.)

1878	37,146,385	279,892	559,784	937,211	839,056	16.1	25.2	22.6

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

TABLE 85.—SPAIN. Population: Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTIONS PER 1000 OF THE POPULATION.		
	ESTIMATED POPULATION.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	PERSONS MARRIED.	BIRTHS.	DEATHS.
1861	15,879,863	180,731	261,462	624,006	417,564	16.5	39.3	26.3
1862	16,065,124	128,696	237,292	615,919	430,963	16.0	38.2	26.8
1863	16,210,263	124,176	248,332	606,800	461,661	15.3	37.4	28.5
1864	16,340,323	120,903	232,096	620,646	490,486	15.5	38.5	30.6
1865	16,423,793	128,917	237,834	622,030	538,680	15.7	37.9	32.8
1866	16,579,090	131,381	263,962	618,981	465,684	15.9	37.3	28.0
1867	16,716,151	118,409	236,818	624,212	487,151	14.2	37.3	29.1
1868	16,832,212	111,684	223,368	570,464	548,690	13.3	34.4	32.6
1869	16,883,986	137,120	274,340	602,267	550,660	16.2	35.7	32.6
1870*	16,955,613	103,543	211,080	599,786	509,669	12.5	35.4	30.1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,539. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE 86.—ITALY (inclusive of VENETIA). Population: Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1863 to 1878.

(Furnished by Professor L. Bodio, Director of General Italian Statistics.)

1874	27,380,958	207,997	415,994	951,653	827,233	15.2	34.9	30.8
1875	27,482,174	230,486	460,972	1,032,377	843,161	16.8	37.7	30.7
1876	27,768,475	225,453	450,906	1,083,721	796,420	16.2	39.0	28.7
1877	28,010,696	214,972	429,944	1,020,087	787,817	13.3	36.7	28.1
1878	28,309,630	190,883	389,770	1,012,475	815,550	14.2	35.9	28.8

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome, where the census was not taken until 1872) is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, without civil contract, not being legally recognized, have not been registered; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE 37.—Changes in the Constitution of the Superintendent Registrars' Districts and Registration Sub-districts during the Year 1878.

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District and Sub-district.]

Superintendent Registrar's DISTRICT and Registrar's <i>Sub-district</i> in which a change was effected, or from which a transference was made.	Date of Change.	Place and Population (1871) transferred from the District in Column 1 to the District in Column 4.	Superintendent Registrar's DISTRICT and Registrar's <i>Sub-district</i> in which a change was effected, or to which an addition was made.
TRAND (11): <i>Long Acre</i> (1) - - - <i>Charing Cross</i> (2) - - -	1st Aug. "	Long Acre Sub-district - 11,379 Charing Cross Sub-district 9,889	The two Sub-districts of <i>Long</i> and <i>Charing Cross</i> united for registration purposes, and to form Registrar's Sub-district, viz. <i>Martin in the Fields</i> Sub-district (1).
WESTBOURNE (85): <i>Funtington</i> (1) - <i>Westbourne</i> (2) -	1st Feb. "	Funtington Sub-district 3,207 Westbourne Sub-district 4,014	The two Sub-districts of <i>Funtington</i> and <i>Westbourne</i> united for registration purposes, and to form one Registrar's Sub-district, viz. <i>Westbourne</i> Sub-district.
ST. THOMAS (271): <i>Heavitree</i> (6) -	15th July	The parish of St. Leonard's, save and except the portions, &c. &c. (see City of Exeter Extension Act, 1877, 40 & 41 Vict. c. cxli.) Population - 1,997 Area in Acres - 188	EXETER (272): <i>St. Sidwell</i> (1) to hereafter called the "<i>Exeter East</i>" Sub-district. The Sub-district <i>St. David</i> (2) to be henceforth called "<i>Exeter Western</i>" Sub-district.
TWICKESBURY (336): <i>Deerhurst</i> (1) - <i>Tewkesbury</i> (3) -	1st July "	Deerhurst Sub-district - 4,206 Tewkesbury Sub-district 7,228	The two Sub-districts of <i>Deerhurst</i> and <i>Tewkesbury</i> united for registration purposes, and to form one Registrar's Sub-district, viz. "<i>Tewkesbury</i>" district (1)
PRESTON (476): <i>Preston</i> (2) - - -	1st Jan.	Fishwick Township - 1,912 Preston Township - 83,515	To be divided into three Sub-districts viz.: (2) <i>Trinity</i>, comprising Trinity and Fishwick wards. (3) <i>St. Peter</i>, comprising St. Peter's ward. (4) <i>St. John</i>, comprising Church and St. George's wards. The remaining Sub-districts to be renumbered.
HUDDERSFIELD (404): <i>Meltham</i> (2) - <i>Honley</i> (3) -	1st July "	Meltham Sub-district - 7,092 Honley Sub-district - 5,998	The two sub-districts of <i>Meltham</i> and <i>Honley</i> were united for registration purposes, and to form one Registrar's Sub-district, viz. "<i>Honley</i>" district (2).

NOTE.—In the various Tables of Abstracts given in this Report, the area and population are stated for the above Districts according to the alterations here indicated.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal part of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper). These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They include spaces occupied by foreshore or tidal water of rivers and creeks.

* The parishes which formed the district of Presteligne (607) were, on its dissolution, added to the Superintendent Registrar's District of Kingston (348) and Knighton (608) on the 1st July 1877.

† At the end of the year 1878, the number of Superintendent Registrar's Districts was 651. The numerical arrangement, 1 to 651, was adopted on 1st January 1879. Six new Superintendent Registrar's Districts, viz., Fulham (1a), Frestwich (467a), Barrington (481a), Middlesbrough (538a), Lancaster (540), and Pontardawe (587a), have been constituted since 1871, and two Superintendent Registrar's Districts have been dissolved, viz., Shrewsbury (333), which has been incorporated with Arnhem (531), and parishes forming the District of Presteligne (607) have been added to the Superintendent Registrar's Districts of Kingston (348), and Knighton (608).

Ages of Persons Married in 1878.

AGES OF 299,794 PERSONS WHO WERE MARRIED IN ENGLAND IN THE YEAR 1878.

The Total Number of MARRIAGES registered in England in the Year 1878 was 190,054; the Ages of both Parties were specified in 149,897 instances. In the other 40,157 cases the column of the Register headed "Ages" is unfortunately filled in by the Officiating Minister or by the Registrar of Marriages with the words "of full Age," "Minor," "Under Age," as the case may be.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal part of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

Abstract of Marriages, Births, and Deaths, 1878.

31

* The Superintendent Registrars' Districts (631 in number at the end of the year 1878) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by H for Hospital or Infirmary, L for Lunatic Asylum, and W for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths" it denotes that

* The Sub-districts (2183 in number at the end of the year 1878) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; H indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions

DEATHS IN PUBLIC INSTITUTIONS, 1878.

THE following pages contain the numbers of deaths registered during 1878 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1459 Institutions; of which 718 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 658 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1459 Institutions 51,425 deaths were registered during the year, or 9·5 per cent. of the total deaths in England and Wales, against 9·1 and 9·9 per cent. in the two preceding years; 33,534 occurred in Workhouses, 13,136 in Hospitals, and 4755 in Lunatic Asylums. Each of these totals exceeded the corresponding number in 1877, and the proportion to total deaths was 6·2 per cent. in Workhouses, 2·4 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

NOTE.—The Table may be read thus: Of the 278,772 deaths of Males, 75,659 were those of children under 1 year of age; 24,342 those of the 1 and under 2 years; 9,918 of the age 3 and under 10 years; 5,932 of the age 15 and under 20 years, and so on.

* This column includes the deaths of 24 males registered as aged 100 years and upwards; namely, 13 aged 100, 5 aged 101, 2 aged 102, 1 aged 103, 1 aged 104 years, and one aged 105 years. The districts in which these deaths occurred and the cause of death in each case stated in Table 33, page lxxvi, of Report.

The Causes of Death in England and in London, in combination with the Ages at Death, are given at pp. 146-151.

Deaths at different Ages, 1878.

**CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND
AND LONDON.**

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

**DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES,
AND DISTRICTS.**

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146-155) gives printed in *Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated “Heart Disease,”—in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is the disease of the organs without any further distinction.

TABLE of CAUSES OF DEATH in ENGLAND in 1878, classified in accordance with the NOMENCLATURE drawn up by a COMMITTEE appointed by the ROYAL COLLEGE OF PHYSICIANS OF LONDON . . .	259

APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES OF DEATH in
ENGLAND AND WALES, by W. FARR, Esq., C.B., M.D., F.R.S.

YEAR 1878.

SIR,

The following presents a summary view of the deaths from five classes of causes in the year 1878:—

			Mortality to 1,000,000 persons living.
Total deaths	- -	539,872	21,721
CLASSES.			
I. Zymotic diseases	- -	105,985	4278
II. Constitutional diseases	- -	91,874	3708
III. Local diseases	- -	244,010	9848
IV. Developmental diseases	- -	74,975	3026
V. Violent deaths	- -	18,847	761
Sudden deaths (cause not ascertained).		2,498	100
Causes not specified	-	1,683	—

There was a diminished mortality in the year 1877 from zymotic disease which had the effect of diminishing mortality generally: in 1878 the mortality from zymotic disease increased so that it was higher than it had been since 1875. The diseases of this class the most fatal in 1878 were diarrhoea (24,462), scarlet fever (18,842), whooping-cough (17,784), measles (7765), enteric fever (7652), croup (4061), diphtheria (3498), rheumatism (3420). The mortality from small-pox was lower than in 1877. Euthetic disease was fatal to 2513 persons; syphilis is much more fatal than it was twenty years ago. Hydrophobia caused the deaths of 50 persons or 29 less than in 1877, in which year the deaths from this cause attained the highest number on record, 79. The deaths from hydrophobia ranged from 1 to 12 in the years 1862 to 1864, from 19 in 1865 to 56 in 1871, from 47 in 1875 to 79 in 1877, and in 1878 the number was 50. There were only 7 deaths from glanders. The total deaths from delirium tremens and intemperance were 792 in the year 1851, and 1116 in the year 1878.

Gout was fatal to 214 persons in 1851 and to 593 in 1878. Cancer was fatal to 5218 in 1851 and to 12,664 in 1878; the average annual mortality during the five years 1850-4 was 302 in one million living, in the five years 1870-4 it was 443, while in the year 1878 the rate was 512: thus the mortality from cancer has increased year by year since 1851. It is a malignant disease, slow in its progress but surely fatal. Tubercular disease killed 73,549 persons including 52,856 by phthisis.

Local diseases were the most fatal, causing the death of 244,010 persons, including 70,994 by diseases of the nervous system, 35,482 by diseases of the organs of circulation, and 96,784 by diseases of the respiratory system (of bronchitis 60,742 persons died; of pneumonia 24,763). Of diseases

jaundice, and liver diseases. 10,559 persons died of urinary disease, including 4801 by nephria, 1057 by diabetes, to which the number has increased from 403 in 1851. By ovarian dropsy the deaths were 367, to which the deaths increased from 196 in 1851.

By premature births 12,002 infants died. The number of deaths by childbirth and metria were 3300, or 3·7 to 1000 children born alive. The number of deaths ascribed to old age was 27,483; to atrophy and debility 26,658.

The number of violent deaths in the aggregate was 18,847; including 16,694 through accident or negligence, of which 7070 were from fractures and contusions, 102 from gunshot wounds, 129 from cuts and stabs, 2617 from burns and scalds, 350 from poison, 3659 from drowning, 1759 from suffocation, and 1008 otherwise. Of the suicides, 109 were by gunshot wounds, 320 by cuts and stabs, 215 by poison, 369 by drowning, 606 by hanging, 145 by other means or means not specified. 374 deaths were by homicide; and 15 persons were executed, whereas the number in 1871 was only 4. The number of violent deaths in the aggregate to 1,000,000 persons living was 772 in 1863 and 761 in 1878. In the sixteen years 1863-78 the number of suicides to 1,000,000 persons living increased from 66 to 71; the number of homicides decreased from 20 to 15. The number of executions remains nearly stationary, viz., one in 1,000,000 persons living.

I have the honour to be,

Sir,

Your very obedient Servant,

WILLIAM FARR.

To

The Registrar General.

NOTE.—For the causes of death in the 5 years 1858-62, and the 4 years 1847-50, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1847-50.

* Deaths from violence were not classified according to orders prior to 1858. All deaths from violence are classified to Order I. (Acc or Negligence), unless they are specially ascribed to homicide, suicide, or execution. Order 2, comprising violent deaths in battle, is applicable to the civil population.

† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in "Criminal Returns," inasmuch as the executions therein recorded in each year are classed according to the dates of conviction, the numbers in this Table are placed under the years in which the deaths are registered.

† The cases of anura membranacea were included with scarlet fever until 1860; for several years prior to that date they were, however, separately distinguished by a marginal note on the tickling sheet, as they have been since 1860, when they were first classed so

* Classed with *Enrioploa* specimens to 188.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated: in calculating the mean rate

TABLE 4.* (continued).—Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 25 Years 1850-74, and in each QUINQUENNIAL of that Period; also the Rate of Mortality in the Years 1875, 1876, 1877, and 1878.

* The population of these counties have been estimated to the middle of 1874 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1851 and 1871 was maintained up to the middle of 1874. The population of London is taken from the census of 1871.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 269) and "Index of certain Towns" (page 279).

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-FIRST ANNUAL REPORT AND APPENDIX.

NOTE.—Rep. refers to the Report; Prel. to the Preliminary Tables; and App. to the Appendix.

	PAGES
AGES of Persons	xiv-xvi
at Marriage; improvement in the Returns, 1858-1878. (Table 10.—Rep.)	xiv
at Marriage; imperfect Returns of 1877 and 1878. (Table 11.—Rep.)	xv
Mean Age at Marriage	xv
Proportions per cent. of Minors married; 1841-78. (Table 12.—Rep.)	xvi
Mortality of Males and Females at different Ages in England in the Year 1878, and the average in 25 Years, 1848-72. (Table 25.—Rep.)	xxxiii
Proportional Mortality at different Ages per 1000 Persons living at all Ages, 1875-6-7-8. (Table 26.—Rep.)	xxxiv
Deaths of Males and Females registered at different Ages in England in each of the Years 1838-78. (Tables 23, 24.—Prel.)	lxxvi-lxxvii
Mortality of Males and Females at 12 groups of Ages in England, 1838-78. (Tables 25-28.—Prel.)	lxxviii-lxxxii
Mortality of Persons, Males and Females, at 12 groups of Ages in Divisions and Counties. (Tables 30, 31.—Prel.)	lxxxiii-lxxxiv
of 299,794 Persons married, distinguishing Bachelors, Spinsters, Widowers, Widows	26-28
at Death of Males and Females registered in Divisions, Counties, and Districts	121-143
at Death of Males and Females in England registered from different Causes	145-155
at Death of Males and Females in London registered from different Causes	156-161
(See also MARRIAGES, BIRTHS, and DEATHS.)	
ANIMALS ; Numbers and Value, Imported 1876-7-8. (Table 7.—Rep.)	x
APPENDIX	223-226
APPENDIX TABLES	227-263
AREA in Statute Acres of each Division, County, District, and Sub-district	30-34
in Acres and Hectares of the United Kingdom. (Table 52.—Prel.)	ciii
of the Islands in the British Seas. (Table 54.—Prel.)	civ
ARMY ; Strength and Mortality of the Army at Home and Abroad. (Tables 58-65, pp. cviii-cx, Prel.) (Table 26.—Rep.)	xli
Average Strength and Proportion per cent. of the British Army at Home and Abroad in each of the Years 1861-78. (Table 59.—Prel.)	cviii

	PAGES
ARMY—continued.	
Mortality of the Army at Home. (Table 60.—Prel.)	cviii
Average Strength of the British Army Abroad in each of the Years 1875-78. (Table 61.—Prel.)	cix
Number of Deaths in the British Army at Home and Abroad, 1875-78. (Table 62.—Prel.)	cix
Annual Rate of Mortality per 1000 amongst Officers and Men in the Army at Home and Abroad, 1858-78. (Table 63.—Prel.)	cix
Strength at Home and Abroad in 1861 and 1871, showing the Numbers and Proportion per cent. born in the different parts of the United Kingdom and elsewhere. (Table 64.—Prel.)	cx
Deaths in Army Abroad of Officers and Men belonging to Great Britain and to England and Wales, 1858-78. (Table 65.—Prel.)	cx
ATMOSPHERIC PRESSURE	xlvi
AUSTRIA ; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-78. (Table 37.—Rep.) (Table 73.—Prel.)	cxxi
Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, in each of the Years 1953-78. (Table 77.—Prel.)	cxxiii
BELGIUM ; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-78. (Table 37.—Rep.) (Table 73.—Prel.)	cxxi
Estimated Population; Number and Proportion to Population, of Persons married, Births, and Deaths, 1853-78. (Table 83.—Prel.)	cxxvi
BIRTHS	v, xx
Illegitimate; decline in the proportion of	v, xxi
proportional Number of Illegitimate to 100 Births in Counties, 1855-64, 1865-74, and in 1875-78; and Proportion of Spinsters aged 20-40 to every 100 women living at the same age in 1871. (Table 17.—Rep.)	xxii
registered in England, and excess over Deaths, in each Year, 1838-78. (Table 1.—Prel.)	liv
Number of Persons living to one Birth. (Table 2.—Prel.)	lv
registered in England in each Quarter of the Years 1838-78. (Table 13.—Prel.)	lxvi
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter of the Years 1838-78. (Table 14.—Prel.)	lxvii
in England 1838-78; and Legitimate and Illegitimate in 1842 and in the Years 1845-78, and Proportion of Males to Females. (Table 15.—Prel.)	lxviii
proportion of Illegitimate Children to every 100 Births in the several Counties of England in each of the Years 1868-78. (Table 16.—Prel.)	lxix
in Counties, in 1878. Numbers, Sex, Legitimate and Illegitimate; Proportions of Male to Female Births, Legitimate and Illegitimate. (Table 17.—Prel.)	lxxii
proportion of Male and Female Children born in the several Counties of England during each of the Years 1868-78. (Table 18.—Prel.)	lxxi
to 1000 persons living in the several Counties of England during each of the Eleven Years 1868-1878	lxxii
in Fifty large Town Districts. (Table 39.—Prel.)	xc
in Twenty-three large Towns of the United Kingdom. (Table 40.—Prel.)	xcii
in London in the Years 1866-78, distinguishing Males and Females. (Table 42.—Prel.)	xciii
